Research methods. Uses and limitations of questionnaires, interviews, and case studies Oct 24 2021 Seminar paper from the year 2002 in the subject Didactics - Business economics, Economic Pedagogy, grade: 2.2 (B), University of Manchester (Manchester School of Management), language: English, abstract: At the beginning of any type of research, it is paramount for the researcher to determine the most appropriate methodology to carry out the study. While factors such as time and costs certainly play an important part in deciding how to approach a particular research problem, the subject of the research itself should ultimately determine the methods used. A good researcher will evaluate all available options prior to making a decision as to which methods to adapt in the light of being the most useful for the study at hand. This paper will focus on describing a variety of methods, namely questionnaires, interviews, and case studies. Each chapter will give a brief introduction about the method, and then highlight the main strengths and limitations of each approach. Attention is also given to induction, which is defined as a data-driven approach to research, while deduction is seen as theory-driven. As such, the notion of data-driven versus theory-driven will be explored briefly for each method.

Integrating Library Use Skills Into the General Education Curriculum Mar 17 2021 This provocative new book will help you design and implement the most effective library user education possible--one that builds on basic library use skills through a progressively sophisticated program that is fully integrated into course curriculum at all levels, from the freshman year to graduation and beyond. By exploring major issues underlying the integration of library use skills and research methodologies into the general education curriculum, contributors raise important questions, offer creative ideas, and provide insight into the many improvements made in library instruction in the past few years. Following an introduction by Patricia Breivik, a recognized national authority on libraries and general education, contributors representing two- and four-year institutions and research universities discuss such issues as the relationship between high school and college programs, research skills instruction in a remote access environment, the use of microcomputers and end user searching programs to promote critical thinking, and the improved relationship between librarians and faculty. In addition to articles on library instruction geared towards question analysis, information generation by field, structure of published knowledge and dissemination of a discipline's literature, chapters identify cooperative efforts needed among school, public, special, academic libraries and other information agencies, computer center personnel, and online database vendors. Bibliographic instruction librarians who are active participants in planning and administering library user education programs will find this volume to be essential for building and developing stronger, more integrated programs.

The SAGE Encyclopedia of Communication Research Methods Jul 21 2021 Communication research is evolving and changing in a world of online journals, open-access, and new ways of obtaining data and conducting experiments via the Internet. Although there are generic encyclopedias describing basic social science research methodologies in general, until now there has been no comprehensive A-to-Z reference work exploring methods specific to communication and media studies. Our entries, authored by key figures in the field, focus on special considerations when applied specifically to communication research, accompanied by engaging examples from the literature of communication, journalism, and media studies. Entries cover every step of the research process, from the creative development of research topics and questions to literature reviews, selection of best methods (whether quantitative, qualitative, or mixed) for analyzing research results and publishing research findings, whether in traditional media or via new media outlets. In addition to expected entries covering the basics of theories and methods traditionally used in communication research, other entries discuss important trends influencing the future of that research, including contemporary practical issues students will face in communication professions, the influences of globalization on research, use of new recording technologies in fieldwork, and the challenges and opportunities related to studying online multi-media environments. Email, texting, cellphone video, and blogging are shown not only as topics of research but also as means of collecting and analyzing data. Still other entries delve into considerations of accountability, copyright, confidentiality, data ownership and security, privacy, and other aspects of conducting an ethical research program. Features: 652 signed entries are contained in an authoritative work spanning four volumes available in choice of electronic or print formats. Although organized A-to-Z, front matter includes a Reader's Guide grouping entries thematically to help students interested in a specific aspect of communication research to more easily locate directly related entries. Writing a Research Paper in Political Science Nov 05 2022 Even students capable of writing excellent essays still find their first major political science research paper an intimidating experience. Writing a Research Paper in Political Science breaks down the research paper into its constituent parts and shows students what they need to do at each stage to successfully complete each component until the paper is finished. Practical summaries, recipes for success, worksheets, exercises, and a series of handy checklists make this a must-have supplement for any writing-intensive political science course. New to the Fourth Edition: A non-causal research paper woven throughout the text offers explicit advice to guide students through the research and writing process. Updated and more detailed discussions of plagiarism, paraphrases, "drop-ins," and "transcripts" help to prevent students from misusing sources in a constantly changing digital age. A more detailed discussion of "fake news" and disinformation shows students how to evaluate and choose high quality sources, as well as how to protect oneself from being fooled by bad sources. Additional guidance for writing abstracts and creating presentations helps students to understand the logic behind abstracts and prepares students for presentations in the classroom, at a conference, and beyond. A greater emphasis on the value of qualitative research provides students with additional instruction on how to do it.
