Blimp Pilot Terrorizes Akron (And Other Hot Air) Nov 27 2019 Here's Akron, with attitude. A giant cockroach, ticket-happy traffic cops, sexting teens, bumbling politicians, prima donna sports stars . . . There are few topics that Akron Beacon Journal columnist Bob Dyer hasn't tackled head-on. His biting commentary has earned him followers and foes alike—along with a boatload of awards. In this collection of his best writing, Dyer nearly crashes the Goodyear blimp, drag races in a '64 Plymouth Barracuda, drives a 126-ton locomotive, panhandles on a downtown street corner, surveys the "Great Wall of Fairlawn," dispenses unsolicited advice to LeBron James, and generally waves a red flag at political correctness. Great fun to read—as long as you're not overly sensitive!

Mixed Integer Nonlinear Programming Dec 09 2020 Many engineering, operations, and scientific applications include a mixture of discrete and continuous decision variables and nonlinear relationships involving the decision variables that have a pronounced effect on the set of feasible and optimal solutions. Mixed-integer nonlinear programming (MINLP) problems combine the numerical difficulties of handling nonlinear functions with the challenge of optimizing in the context of nonconvex functions and discrete variables. MINLP is one of the most flexible modeling paradigms available for optimization; but because its scope is so broad, in the most general cases it is hopelessly intractable. Nonetheless, an expanding body of researchers and practitioners — including chemical engineers, operations researchers, industrial engineers, mechanical engineers, economists, statisticians, computer scientists, operations managers, and mathematical programmers — are interested in solving large-scale MINLP instances.
