CO2 in Seawater: Equilibrium, Kinetics, Isotopes May 31 2022 Carbon dioxide is the most important greenhouse gas after water vapor in the atmosphere of the earth. More than 98% of the carbon of the atmosphere-ocean system is stored in the oceans as dissolved inorganic carbon. The key for understanding critical processes of the marine carbon cycle is a sound knowledge of the seawater carbonate chemistry, including equilibrium and nonequilibrium properties as well as stable isotope fractionation. Presenting the first coherent text describing equilibrium and nonequilibrium properties and stable isotope fractionation among the elements of the carbonate system. This volume presents an overview and a synthesis of these subjects which should be useful for graduate students and researchers in various fields such as biogeochemistry, chemical oceanography, paleoceanography, marine biology, marine chemistry, marine geology, and others. The volume includes an introduction to the equilibrium properties of the carbonate system in which basic concepts such as equilibrium constants, alkalinity, pH scales, and buffering are discussed. It also deals with the nonequilibrium properties of the seawater carbonate chemistry. Whereas principle of chemical kinetics are recapitulated, reaction rates and relaxation times of the carbonate system are considered in details. The book also provides a general introduction to stable isotope fractionation and describes the partitioning of carbon, oxygen, and boron isotopes between the species of the carbonate system. The appendix contains formulas for the equilibrium constants of the carbonate system, mathematical expressions to calculate carbonate system parameters, answers to exercises and more.

Notes from a Feminist Killjoy Nov 24 2021 "Erin Wunker is a feminist killjoy, and she thinks you should be one, too. Following in the tradition of Sara Ahmed (the originator of the concept "feminist killjoy"), Wunker brings memoir, theory, literary criticism, pop culture, and feminist thinking together in this collection of essays that take up Ahmed's project as a multi-faceted lens through which to read the world from a feminist point of view. Neither totemic nor complete, the non-fiction essays that make up *Notes from a Feminist Killjoy: Essays on Everyday Life* attempt to think publicly about why we need feminism, and especially why we need the figure of the feminist killjoy, now. From the complicated practices of being a mother and a feminist, to building friendship amongst women as a community-building and -sustaining project, to writing that addresses rape culture from the Canadian context and beyond, *Notes from a Feminist Killjoy: Essays on Everyday Life* invites the reader into a conversation about gender, feminism, and living in our inequitable world."--

The result is a book that maintains the strong legal content of previous editions while introducing more real-life examples of business law in practice.

Electrochemistry and Corrosion Science Nov 12 2020 Electrochemistry and Corrosion Science is a graduate level text/professional reference that describes the types of corrosion on metallic materials. The focus will be on modeling and engineering approximation schemes that describe the thermodynamics and kinetics of electrochemical systems. The principles of corrosion behavior and metal recovery are succinctly described with the aid of pictures, figures, graphs and schematic models, followed by derivation of equations to quantify relevant parameters. Example problems are included to illustrate the application of electrochemical concepts and mathematics for solving complex corrosion problems. This book differs from others in that the subject matter is organized around the modeling and predicating approaches that are used to determine detrimental and beneficial electrochemical events. Thus, this book will take a more practical approach and make it especially useful as a basic text and reference for professional engineers.
