The Van Conversion Bible Dec 01 2019 Want to wake up to a breathtaking new view every morning? Have you been dreaming about owning a vehicle to fuel your adventures? Building a campervan gives you total freedom to create your very own rolling home. Escape the daily grind, hit the open road and re-write the way you live. The Van Conversion Bible is the ultimate guide to planning, designing and converting a campervan. It's more than just the story of how we built our own van Ringo, it will help you build a van bespoke to your needs. It provides definitive answers to your questions (even the ones you haven't thought of yet!) to ensure you save time and avoid expensive mistakes. From detailed gas, water and electrical system diagrams to a step-by-step build guide, you'll find everything you need to start your journey inside. Whatever your skills and budget, you can learn how to build your dream campervan. Your very own home on wheels awaits...

Blood Works: An Owner's Guide Jan 02 2020 Much has been published on heart health, kidney health, and gut health. But how many of us are aware of our blood health? Is your blood as healthy as it should be? How would you even know? Blood Works is a fascinating new blood owners' guide to help you care for the health of your most precious fluid—your blood. About 2 billion people globally are anemic, and almost as many suffer from iron deficiency without anemia. Many don't even know they have it, just feeling tired, lethargic, and “foggy-headed.” Sound familiar? Over 600 million more suffer from acute or sometimes unrecognized chronic blood loss from causes such as heavy menstrual bleeding, obstetric hemorrhage, gastrointestinal bleeding, surgery, and trauma. Anemia, iron deficiency, and bleeding are signs of “blood failure” and have major negative health effects. Blood Works, with contributions from 48 leading international medical experts, is a must have book for all who want to look after their blood health. Your blood is the essential fluid that keeps you alive. Yet, while many of us know our cholesterol level and blood pressure, few of us are aware of our blood count. What we don't know can affect our everyday quality of life and put us at risk if we have bleeding, an injury, or require hospitalization. Blood, and the vessels that contain it, make up the largest organ system in the body. Its balance and health must be maintained. For many decades, the treatment of first resort for anemia and blood loss has been blood transfusion, which is essentially a “liquid organ” transplant from another person. In heart failure or kidney failure, organ transplantation is not first-line treatment. In blood failure, blood “transplantation” should not be the first thing we reach for. Since the 1990s, scientific research has shown that the common use of blood transfusion is not the most effective treatment in many medical situations. It has been identified as one of the most overused treatments in modern medicine, costing billions of dollars, while causing changes in the recipient's immune system that may increase the risk of complications and death. In October 2021, the World Health Organization called for the urgent global implementation of Patient Blood Management (PBM), stating “our own blood is still the best thing to have in our veins.” Blood Works is one of the most exciting books on blood health you will read. The book zooms in on why medical experts from around the world now recognize the need for fundamental change in the way a patient's blood is managed. Known as PBM, Patient Blood Management places the person receiving treatment at the center of decisions involving their lifeblood. Its aim is to improve general health and treatment outcomes by managing and preserving a patient's own blood while empowering them to share in making decisions. Meticulously researched and referenced, masterfully illustrated, and featuring personal stories from patients and their families, Blood Works is a compelling read. It will have a profound impact on your health and the health of your loved ones and is an invaluable resource for health care professionals.

Accelerating Progress in Obesity Prevention Feb 01 2020 One-third of adults are now obese, and children's obesity rates have climbed from 5

to 17 percent in the past 30 years. The causes of the nation's obesity epidemic are multi-factorial, having much more to do with the absence of sidewalks and the limited availability of healthy and affordable foods than a lack of personal responsibility. The broad societal changes that are needed to prevent obesity will inevitably affect activity and eating environments and settings for all ages. Many aspects of the obesity problem have been identified and discussed; however, there has not been complete agreement on what needs to be done to accelerate progress. Accelerating Progress in Obesity Prevention reviews previous studies and their recommendations and presents five key recommendations to accelerate meaningful change on a societal level during the next decade. The report suggests recommendations and strategies that, independently, can accelerate progress, but urges a systems approach of many strategies working in concert to maximize progress in accelerating obesity prevention. The recommendations in Accelerating Progress in Obesity Prevention include major reforms in access to and opportunities for physical activity; widespread reductions in the availability of unhealthy foods and beverages and increases in access to healthier options at affordable, competitive prices; an overhaul of the messages that surround Americans through marketing and education with respect to physical activity and food consumption; expansion of the obesity prevention support structure provided by health care providers, insurers, and employers; and schools as a major national focal point for obesity prevention. The report calls on all individuals, organizations, agencies, and sectors that do or can influence physical activity and nutrition environments to assess and begin to act on their potential roles as leaders in obesity prevention.

What Do Science, Technology, and Innovation Mean from Africa? Oct 30 2019 Explorations of science, technology, and innovation in Africa not as the product of “technology transfer” from elsewhere but as the working of African knowledge. In the STI literature, Africa has often been regarded as a recipient of science, technology, and innovation rather than a maker of them. In this book, scholars from a range of disciplines show that STI in Africa is not merely the product of “technology transfer” from elsewhere but the working of African knowledge. Their contributions focus on African ways of looking, meaning-making, and creating. The chapter authors see Africans as intellectual agents whose perspectives constitute authoritative knowledge and whose strategic deployment of both endogenous and inbound things represents an African-centered notion of STI. “Things do not (always) mean the same from everywhere,” observes Clapperton Chakanetsa Mavhunga, the volume's editor. Western, colonialist definitions of STI are not universalizable. The contributors discuss topics that include the trivialization of indigenous knowledge under colonialism; the creative labor of chimurenga, the transformation of everyday surroundings into military infrastructure; the role of enslaved Africans in America as innovators and synthesizers; the African ethos of “fixing”; the constitutive appropriation that makes mobile technologies African; and an African innovation strategy that builds on domestic capacities. The contributions describe an Africa that is creative, technological, and scientific, showing that African STI is the latest iteration of a long process of accumulative, multicultural knowledge production. Contributors Geri Augusto, Shadreck Chirikure, Chux Daniels, Ron Eglash, Ellen Foster, Garrick E. Louis, D. A. Masolo, Clapperton

Jeep Cherokee XJ Advanced Performance Modifications 1984-2001 Sep 21 2021 The Jeep Cherokee is one of the most prolific and rugged sport utility vehicles in history. Throngs of off-roading enthusiasts have chosen the Cherokee for navigating over the toughest terrain, climbing rocks, and trail driving, but these unibody 1984-2001 models have much room for improvement to become the best off-road vehicles. In *Jeep Cherokee XJ Advanced Performance Modifications: 1984–2001*, author Eric Zappe explains how to transform a stock Cherokee into the toughest and most capable off-road 4x4 SUV. The author details the buildup, right combination of parts and products, and modifications necessary to build an aggressive off-road rig. He also shows how to weld and gusset the frame in critical areas. Installing a three- and four-link suspension system is also profiled so the Cherokee delivers greater travel and better off-road handling. Suspension and frame modifications are necessary to run large wheels and tires. And these wheels and tires are essential for traction, performance, and ground clearance in extreme off-road situations. Swapping in Dana 44, Dana 60, and Ford 9-inch axles delivers superior performance and durability, which is covered as well. In addition, how to modify the Jeep inline 6-cylinder engine for increased displacement and performance is revealed. All of the most popular and effective mods, parts, and upgrades for a dedicated off-road Cherokee are covered. If you've been looking for the one guide to build the most capable off-road Cherokee, you've found it.

Population Health: Behavioral and Social Science Insights Aug 28 2019 The purpose of this book is to gain a better understanding of the multitude of factors that determine longer life and improved quality of life in the years a person is alive. While the emphasis is primarily on the social and behavioral determinants that have an effect on the health and well-being of individuals, this publication also addresses quality of life factors and determinants more broadly. Each chapter in this book considers an area of investigation and ends with suggestions for future research and implications of current research for policy and practice. The introductory chapter summarizes the state of Americans' health and well-being in comparison to our international peers and presents background information concerning the limitations of current approaches to improving health and well-being. Following the introduction, there are 21 chapters that examine the effects of various behavioral risk factors on population health, identify trends in life expectancy and quality of life, and suggest avenues for research in the behavioral and social science arenas to address problems affecting the U.S. population and populations in other developed and developing countries around the world. Undergraduate and graduate students pursuing coursework in health statistics, health population demographics, behavioral and social science, and health policy

may be interested in this content. Additionally, policymakers, legislators, health educators, and scientific organizations around the world may also have an interest in this resource.

Air Pollution from Motor Vehicles Jul 28 2019 Contributions by Surhid Gautam and Lit-Mian Chan. This book presents a state-of-the art review of vehicle emission standards and regulations and provides a synthesis of worldwide experience with vehicle emission control technologies and their applications in both industrial and developing countries. Topics covered include: * The two principal international systems of vehicle emission standards: those of North America and Europe * Test procedures used to verify compliance with emissions standards and to estimate actual emissions * Engine and aftertreatment technologies that have been developed to enable new vehicles to comply with emission standards, as well as the cost and other impacts of these technologies * An evaluation of measures for controlling emissions from in-use vehicles * The role of fuels in reducing vehicle emissions, the benefits that could be gained by reformulating conventional gasoline and diesel fuels, the potential benefits of alternative cleaner fuels, and the prospects for using hydrogen and electric power to run motor vehicles with ultra-low or zero emissions. This book is the first in a series of publications on vehicle-related pollution and control measures prepared by the World Bank in collaboration with the United Nations Environment Programme to underpin the Bank's overall objective of promoting transport that is environmentally sustainable and least damaging to human health and welfare.
