Teaching and Learning English in the Digital Age Jul 24 2019 TEFL in the 21st century First of all, teaching and learning English in the digital age means using digital tools in TEFL classrooms. This introduction exemplifies how to implement them in a meaningful way in combination with reliable methods (for additional practice-oriented teaching and learning suggestions see:

<https://www.deflorio.de/blog> . A further important aspect of digitization is teaching and learning about media. Teachers have to create and deploy opportunities that allow students to develop a critical stance toward media in general and digital media in particular. This introduction to TEFL shows that the rapidly increasing influences of digitization lead to more internationalized and globalized science-based approaches to teaching and learning English. In this perspective, digitization offers an opportunity to rethink and reshape didactic concepts.

Breaking Boundaries Jun 02 2020 Based on providing visual representation of all functions and key pieces of content, What You See Is What You Get (WYSIWYG) is the current interface design paradigm primarily used in personal computing machines. As we move into a world where computing power continues to increase, and we choose to decrease the physical size of our machines so that they will fit into our pockets, WYSIWYG will break. This research agenda explores a paradigm shift, asking whether users of computing machines can effectively complete tasks without this reliance on

visual representation of all functions and information. The two experiments described in this dissertation seek to answer these questions: 1) do visual cues of information and function continue to be required by users in order to complete tasks using mobile devices? 2) are users moving beyond a reliance on recall and recognition memory in human-computer interaction? Furthermore, if these experiments are successful in showing that users no longer need to rely on visual cues in ways similar to the WYSIWYG interactions, can we then describe human-mobile interaction within a memory framework beyond standard recall and recognition? We built two distinct task-based protocols in which participants were asked to work through multi-step tasks, enacting functions and locating pieces of information that we described as being located outside of the physical space of the screen. These functions and pieces of information were not visually represented on the screen. Rather, the participants were primed to understand that the functions and information existed in this non-visual form and could be enacted through particular interaction techniques that referenced the particular, specific space outside of the screen where these items "lived." In the two experiments, participants worked through tasks, either in a WYSIWYG or in a YUMYS paradigm. We took a series of behavioral measurements, including time on task, total number of interactions between the user and the machine in order to complete the task, and successful, correct completion of the tasks. The outcome of this research agenda indicate that the YUMYS interface paradigm will provide a better design framework for mobile designers that will allow mobile users to perceive a decreased workload and increased success as they complete tasks within a YUMYS interface.

Teaching Students How to Use Self-Management Dec 21 2021 Self-management is a robust technique whereby students of all ages and ability levels learn how to control their learning and social behaviors. When students effectively self-manage, teachers spend more time on instruction and less time reminding students how to behave, which benefits teachers and students. Additionally, students learn independence when they self-manage. This guide presents a 10-step instructional sequence for teaching students three types of self-management: self-monitoring, self-evaluation, and self-reinforcement. Each type can be taught to a whole class, small groups, or individual students (grades K-12). Any type can be used with both learning and social behaviors. Through this simple 10-step process, students learn what self-management is, why to use it, how to apply it, and when to use it. Instruction includes role-playing, modeling, and demonstrating mastery during guided practice and in the actual setting. Instruction takes about one hour, spread across multiple sessions. After instruction, follow-up is necessary to reinforce students' use of self-management and confirm that accurate self-management occurs.
