INNOVATIVE SCIENCE TEACHING, FOURTH EDITION **Jul 13 2021** Science teaching has evolved as a blend of conventional methods and modern aids owing to the changing needs and techniques of education with an objective to develop scientific attitude among the students. This Fourth Edition of Innovative Science Teaching aims to strike balance between modern teaching methods and time-tested theories. FEATURES OF THE FOURTH EDITION • Chapters 3, 8 and 13 have been thoroughly revised and updated in the light of advancements of application of technology in teaching. • Chapter 13—New Technology to Promote Learning—has been expanded to include the impact of technology on teaching and learning. • E-learning materials and website addresses relevant to science teaching have been updated. • All chapters have been revised and extensive coverage of all aspects of modern teaching has been included. This edition of Innovative Science Teaching is designed for the undergraduate and postgraduate students of Education specializing in science teaching. It can also prove useful as reference book for administrators, researchers and teacher-trainers. TARGET AUDIENCE • B.Ed (specialization in Science Teaching) • M.Ed (specialization in Science Teaching) • Diploma Courses in Education

Two Lives **Jul 01 2020** TWO LIVES tells the remarkable story of Seth's great uncle and aunt. His great uncle Shanti left India for medical school in Berlin in the 1930s and lodged with a German Jewish family. In the household was a daughter, Henny, who urged her mother 'not to take the blackie'. But a friendship developed and each managed to leave Germany and found their way to Britain as the Nazis rose to power. Shanti joined the army and lost his right arm at the battle of Monte Cassino, while Henny (whose family were to die in the camps) made a for herself in her adopted country. After the war they married and lived the emigre life in north London where Shanti, despite the loss of his arm, became a much-loved dentist. During his adolescence in England, Vikram Seth lived with Shanti and Henny and came to know and love them deeply. His is the third life in this story of TWO LIVES. This is also a book about history, encompassing as it does many of the most significant themes and events in the 20th century, whose currents are reflected in the lives of Shanti, Henny and their family: from the Raj and Indian freedom movement to the Third Reich, the Holocaust and British postwar society.

Tietz Textbook of Clinical Chemistry and Molecular Diagnostics **Nov 17 2021** The Tietz Textbook of Clinical Chemistry and Molecular Diagnostics, 6th Edition provides the most current and authoritative guidance on selecting, performing, and evaluating the results of new and established laboratory tests. This classic clinical chemistry reference offers encyclopedic coverage detailing everything you need to know, including: analytical criteria for the medical usefulness of laboratory tests, variables that affect tests and results, laboratory medicine, applications, statistical methods, and most importantly clinical utility and interpretation of laboratory tests. It is THE definitive reference in clinical chemistry and molecular diagnostics, now fully searchable and with quarterly content updates, podcasts, clinical cases, animations, and extended content online through Expert Consult. Analytical criteria focus on the medical usefulness of laboratory procedures. Reference ranges show new approaches for establishing these ranges — and provide the latest information on this topic. Lab management and costs gives students and chemists the practical information they need to assess costs, allowing them to do their job more efficiently and effectively. Statistical methods coverage provides you with information critical to the practice of clinical chemistry. Internationally recognized chapter authors are considered among the best in their field. Two-color design highlights important features, illustrations, and content to help you find information easier and faster. NEW! Internationally recognized chapter authors are considered among the best in their field. NEW! Expert Consult features fully searchable text, quarterly content updates, clinical case studies, animations, podcasts, atlases, biochemical calculations, multiple-choice questions, links to Medline, an image collection, and audio interviews. You will now enjoy an online version making utility of this book even greater. UPDATED! Expanded Molecular Diagnostics section with 12 chapters that focus on emerging issues and techniques in the rapidly evolving and important field of molecular diagnostics and genetics ensures this text is on the cutting edge and of the most value. NEW! Comprehensive list of Reference Intervals for children and adults with graphic displays developed using contemporary instrumentation. NEW! Standard and international units of measure make this text appropriate for any user — anywhere in the world. NEW! 22 new chapters that focus on applications of mass spectrometry, hematology, transfusion medicine, microbiology, biobanking, biomarker utilization in the pharmaceutical industry and more! NEW! Expert senior editors, Nader Rifal, Carl Wittwer and Rita Horvath, bring fresh perspectives and help ensure the most current information is presented. UPDATED! Thoroughly revised and peer-reviewed chapters provide you with the most current information possible.

The Chemistry and Technology of Solid Rocket Propellants (A Treatise on Solid Propellants) **Sep 22 2019** The book is a treatise on solid propellants in nine chapters, covering the history, chemistry, energetics, processing and characterization aspects of composite solid propellants, internal ballistics, advanced solid propellants, safety, quality and reliability and homogenous double base propellants. The book also traces the evolution of solid propellant technology in ISRO for launch vehicles and sounding rockets. There is a detailed table of contents, expanded index, glossary, exhaustive references and questions in each chapter. It can be used as a textbook for science and engineering students, as a reference book for researchers and as a companion to scientists and engineers working in the research, development and production areas of solid propellants.

Undergraduate Manual of Clinical Cases in Paediatrics **Feb 08 2021** Working up a 'case' for presentation to the examiner is an integral part of clinical learning. Case presentations give opportunity for applying the knowledge of diseases and the clinical skills for evaluation and management of a patient. This practical application (of theory and clinical skills) is tested in practical examination in clinical subjects like paediatrics. This book helps enabling the logical application of theoretical knowledge and clinical skills in real life situations. This book contains details of several real cases, which are common in this part of the world. Each case provides description in a standard format and answers to the questions commonly asked at various stages of case presentation. Important points for communication with parents/patients are given in every case, which will help in developing communication and counseling skills related to a particular disease or condition. It prepares the reader for other components of practical examination in paediatrics, including x-rays, instruments, laboratory reports, and drugs. Annexure includes almost all charts required for clinical workup of a paediatric patient. Very special feature are case related videos on various topics, MCQs, whiteboard lectures on clinical approach to common conditions. In addition, this book comes with complimentary access to enhanced e-book.

Chemical Rockets **Mar 21 2022** The purpose of this book is to discuss, at the graduate level, the methods of performance prediction for chemical rocket propulsion. A pedagogical presentation of such methods has been unavailable thus far and this text, based upon lectures, fills this gap. The first part contains the energy-minimization to calculate the propellant-combustion composition and the subsequent computation of rocket performance. While incremental analysis is for high performance solid motors, equilibrium-pressure analysis is for low performance ones. Both are detailed in the book's second part for the prediction of ignition and tail-off transients, and equilibrium operation. Computer codes, adopting the incremental analysis along with erosive burning effect, are included. The material is encouraged to be used and presented at lectures. Senior undergraduate and graduate students in universities, as well as practicing engineers and scientists in rocket industries, form the readership.
