In the Presence of the Past Aug 25 2019 The broad canvas covered by the articles in the present volume celebrates the diversity and richness of the writings of Frank Manuel during a scholarly career that spans over five decades. The subjects of the articles - ranging from science to utopia, from theology to political thought - mirror many of the themes Manuel has written about with erudition, flair and uncommon perception. It is only fitting that in paying tribute to such a defiant intellect each author brings to his treatment a distinct perspective and texture, the result of his own original forays into the history of ideas. Yet underlying all the essays is the conviction that the study of the intersection of individuals and ideas still yields a rich harvest. Presented to Frank on the occasion of his eightieth birthday, *In the Presence of the Past* honors a teacher, a friend and, above all, a scholar. R. T. Bienvenu and M. Feingold (eds). In the presence of the past. vii. MARTIN PERETZ Frank Manuel: An Appreciation It was finally because of Frank Edward Manuel that I decided (however belatedly) to forgo a proper academic career. Since I had not left so much as a leafscar on the tree of the scholarly culture this is not a fact which anyone else would have reason to notice. It is also not, I am happy to add, something for which Manuel will be especially remembered.

Early History of Cosmic Ray Studies Oct 08 2020 On the occasion of the International Conference on

Cosmic Rays held in Kyoto in August 1979 five aged members of the cosmic ray fraternity, H. Elliot, V. L. Ginzburg, B. Peters, Y. Sekido, and J. A. Simpson met together as a dinner party devoted to the enjoyment of Japanese cuisine and reminiscences of our younger days. This pleasant occasion called to of our own age as well as some eminent seniors not present at the mind the many friends conference whose recollections would have further enriched and enlivened our evening. By the time the dinner came to an end we had agreed that the compilation of a more extensive collection of personal reminiscences would be an interesting and worthwhile undertaking. Accordingly, the next day we held an editorial meeting to draw up a list of potential authors and two of us, the present editors, started work on the project. In putting the book together our intention has been to try to capture and record through these personal accounts something of the atmosphere, the excitement and the frustrations of research in cosmic rays as experienced at first hand by some of the practitioners in the field. It has never been our intention that it should comprise a systematic history of the subject. Neither, unfortunately, can it be a fully representative collection since practical limits to the size of the volume alone would preclude that.

William J. Gedney's Comparative Tai Source Book Nov 08 2020 This volume provides accurate and reliable data from 1,159 common cognates found in 19 dialects from the Tai language family. Originally collected by noted Tai linguist, the late William J. Gedney, the data are organized into the three branches of the Tai language family, the Southwestern, the Central, and the Northern, to facilitate comparisons among the various sound systems within the individual branches and within the Tai language family as a whole. Supplementing the cognates are phonological descriptions of each of the dialects. Included among the nineteen dialects are Siamese, White Tai, Black Tai, Shan, Lue, Yay, Saek, and dialects found at Leiping, Lungming, Pingsiang, and Ningming in China. The meticulous attention paid to consonants, vowels, and tones found in each cognate will allow for further dialect studies, for the investigation of questions concerning the tripartite division of the Tai language family, and for the continuing investigation into the reconstruction of the Proto-Tai language family and its wider genetic relationships.
