The first part (models) serves as an introductory section to differentiate edge computing from its fairly close/similar paradigms such as fog computing, multi-access edge computing and mobile cloud computing. It then highlights various theoretical models through which edge computing systems could be mathematically expressed and their relevant technological problems could be systematically solved or optimized. Library Field Jan 08 2021
WebJunction has just completed an update of the Competency Index for the Library Field. The original 2009 edition has been a valuable resource for libraries, helping staff identify and obtain the knowledge, skills and support needed to power relevant and vibrant libraries. However, it was time for an update. With ever-increasing economic, social, and educational demands, libraries have experienced dramatic changes in community needs and the tools available to serve those needs. Three elements in particular have been emphasized throughout: 21st century skills, accountability, and community engagement. WebJunction intends for the Index to be widely shared and adapted by a variety of libraries to meet their individual needs. -- Publisher description.
