Theory and Practices on Innovating for Sustainable Development Oct 30 2019 This book explains how income growth and better environmental qualities go hand in hand, and reviews the drivers and barriers to sustainable innovation on the basis of real-life cases. It discusses why innovation-based income growth reduces environmental impacts and how the huge global markets for sustainable innovation are currently hampered by protectionist policies. Subsequently, diverse sustainable innovators are presented in ascending order of the complexity of interactions between innovators and stakeholders. In this context, innovating consumers who create communities of peers in solar powered mobility are examined in the first case. It also focuses on regional tacit inventors, who spur innovation in tourism mobility thanks to the informal policies but whose efforts are obstructed by the formalities of the European Union. Artists with an interest in both innovations and the environment develop art services that deliver experiences of environmental qualities. Though these experiences have gone unrecognised so far, they are nonetheless socially beneficial. The book also shows how technology suppliers develop four different patterns of sanitation, each with its own pros and cons for the specific community's needs and conditions. It discusses how project developers also make innovations in office systems, including socially beneficial ones that do away with the need to commute. It includes an analysis of interactions between consumers pursuing ethical consumption and international trailblazers in corporate responsibility and concludes that it is more rewarding to support social entrepreneurs than to attempt to moralise consumers. Further analysis of interactions between sustainable investors and innovators reveals different groups' opinions about policies and markets, helping to explain their weak influence on policies. Mushrooming local energy initiatives are now evolving into energy service companies, producing shifts on energy markets. Why these innovators emerge and how certain policies are blocking them are explained. The policies of the United States and European Union are compared with regard to the main barriers to and drivers of, the renewable energy business. Though the US invests more money and takes more risks, it is less cost-effective in terms of the number of enterprises and jobs, thanks to the feed-in tariffs in Europe. Lastly, the book also discusses policies that invest in

education, skills, knowledge and know-how exchange, but instead abolish perverse?? subventions of vested interests to?? create conditions for sustainable development.

The Silk Road Feb 01 2020 The Silk Road conjures up an image of a traveler carrying silk as he sits atop a camel and moves along a desert highway. This book offers concrete evidence for what he was really carrying and where he was heading, looking at the key sites along the multiple silk roads, using newly discovered documents preserved in the sands of the Taklamakan Desert.

Cases on Green Energy and Sustainable Development Mar 04 2020 Despite the urgent need for action, there is a widespread lack of understanding of the benefits of using green energy sources for not only reducing carbon emissions and climate change, but also for growing a sustainable economy and society. Future citizens of the world face increasing sustainability issues and need to be better prepared for energy transformation and sustainable future economic development. Cases on Green Energy and Sustainable Development is a critical research book that focuses on the important role renewable energy and energy efficiency play in energy transition and sustainable development and covers economic and promotion policies of major renewable energy and energy-efficiency technologies. Highlighting a wide range of topics such as economics, energy storage, and transportation technologies, this book is ideal for environmentalists, academicians, researchers, engineers, policymakers, and students.

Consumer Data Research Mar 16 2021 Big Data collected by customer-facing organisations – such as smartphone logs, store loyalty card transactions, smart travel tickets, social media posts, or smart energy meter readings – account for most of the data collected about citizens today. As a result, they are transforming the practice of social science. Consumer Big Data are distinct from conventional social science data not only in their volume, variety and velocity, but also in terms of their provenance and fitness for ever more research purposes. The contributors to this book, all from the Consumer Data Research Centre, provide a first consolidated statement of the enormous potential of consumer data research in the academic, commercial and government sectors – and a timely appraisal of the ways in which consumer data challenge scientific orthodoxies. Praise for Consumer Data Research 'An insightful, state-of-the-art guide into the social and commercial value of applying geographical thinking to the study of consumer data.' Professor Richard Harris, University of Bristol 'An excellent guide to leveraging the value of academic research on valid data. Partnerships based around consumer data should be encouraged and supported by all and their outputs used to better the way we manage the world we live in.' Bill Grimsey, retailer and author of The Vanishing Highstreet 'The use of data from everyday consumer transactions is a potential game-changer for understanding economic and social patterns and trends. This is an excellent overview of the field.' Dr. Tom Smith, Managing Director, Office

of the emerging experience with the design and implementation of price and quota based instruments to promote renewable energy in

NETWORKING 2000. Broadband Communications, High Performance Networking, and Performance of Communication Networks Jan 26 2019 This was the first conference jointly organized by the IFIP Working Groups 6. 2, 6. 3, and 6. 4. Each of these three Working Groups has its own established series of conferences. Working Group 6. 2 sponsors the Broadband Communications series of conferences (Paris 1995, Montreal 1996, Lisboa 1997, Stuttgart 1998, and Hong-Kong 1999). Working Group 6. 3 sponsors the Performance of Communication Systems series of conferences (Paris 1981, Zürich 1984, Rio de Janeiro 1987, Barcelona 1990, Raleigh 1993, Istanbul 1995, and Lund 1998). Working Group 6. 4 sponsors the High Performance Networking series of conferences (Aaren 1987, Liège 1988, Berlin 1990, Liège 1992, Grenoble 1994, Palma 1995, New York 1997, Vienna 1998). It is expected that this new joint conference will take place every two years. In view of the three sponsoring Working Groups there were three separate tracks, one per Working Group. Each track was handled by a different co chairman. Specifically, the track of Working Group 6. 2 was handled by Ulf Körner, the track of Working Group 6. 3 was handled by Ioanis Stavrakakis, and the track of Working Group 6. 4 was handled by Serge Fdida. The overall program committee chairman was Harry Perros, and the general conference chairman was Guy Pujolle. A total of 209 papers were submitted to the conference of which 82 were accepted. Each paper was submitted to one of the three tracks.

Grid Parity Aug 09 2020 Grid Parity provides an in-depth examination of the knowledge, insights, and techniques that are essential to success in financing renewable energy projects. An energy project finance expert with 35 years of experience in capital asset financing, the author provides a comprehensive overview of how to finance renewable energy projects in America today. He explores a components of "the deal" including tax, accounting, legal, regulatory, documentation, asset management and legislative drivers to this dynamic growth sector. Filled with case studies, the book provides a thorough examination of what it takes to compete in the green-energy marketplace.

Survivable Networks Jan 02 2020 Survivable Networks: Algorithms for Diverse Routing provides algorithms for diverse routing to enhance the survivability of a network. It considers the common mesh type network and describes in detail the construction of physically disjoint paths algorithms for diverse routing. The algorithms are developed in a systematic manner, starting with shortest path algorithms appropriate for disjoint paths construction. Key features of the algorithms are optimality and simplicity. Although the algorithms have been developed for survivability of communication networks, they are in generic form, and thus applicable in other scientific and technical disciplines to problems that can be modeled as a network. A notable highlight of this book is the consideration of real-life telecommunication networks in detail. Such networks are described not only by nodes and links, but also by the actual physical elements, called span nodes and spans. The sharing of spans (the actual physical links) by the network (logical) links complicates the network, requiring new algorithms. This

book is the first one to provide algorithms for such networks. Survivable Networks: Algorithms for Diverse Routing is a comprehensive work on physically disjoint paths algorithms. It is an invaluable resource and reference for practicing network designers and planners, researchers, professionals, instructors, students, and others working in computer networking, telecommunications, and related fields.

The Pricing of Internationally Traded Gas Jul 28 2019 A volume on the pricing of gas in international trade. Gas accounts for around 25% of global energy demand and international gas trade is growing rapidly. The book covers the development of international gas pricing in all regions of the world where gas is traded, and considers whether gas could become a global market.
