Republic of Iraq Public Expenditure Review Feb 11 2021 This Public Expenditure Review (PER) provides an integrated perspective on Iraq's need to provide better public service delivery, while maintaining macroeconomic stability and fiscal discipline. The achievement of these objectives unfolds within a challenging context of revenue volatility, the need to diversify the economy, weak accountability mechanisms, and residual conflict. Reflecting these challenges, key socio-economic developmental indicators are stalled or even declining despite rapid growth in public spending. Indeed, the review shows that growth in spending has not been matched by absorptive capacity, let alone improved outcomes. The difficult task of constructing the fiscal institutions to embed the practices of good economic management remains a work-in-progress. The PER is one component of World Bank assistance to the government to improve public expenditure policy and management. The challenge for the Iraqi authorities in the years ahead will be to turn oil revenues into sustained welfare improvements. Macroeconomic stability alone is not enough to address social and economic development issues and to avoid a resource curse. Iraq's oil wealth alone cannot generate sustainably high living standards for the majority of its population. Economic diversification is an imperative—both to create jobs and to promote income-generating opportunities for the Iraqi population. The key challenges for the authorities therefore are (i) to remove constraints to non-hydrocarbon economic activities; (ii) to ensure the efficient use of oil revenue; and (iii) to restrain the growth of current spending (in particular wage bill and subsidies) to free up resources for public investment, while maintaining essential safety nets and social support for the poor and disadvantaged. Public investment management is a crosscutting capability that is needed to meet Iraq's development objectives. The government has the opportunity to take concrete steps now. The PER proposes approaches and actions to better use Iraq's oil revenues by shifting to a save and invest via curbing inefficient spending and redirecting resources to public investment and basic services. As economic growth prospects are favorable in the medium-term, the Iraqi government has the opportunity to lay the foundations of a broadly diversified economy, with a reasonable footprint that provides decent public services and security while facilitating adequate economic freedom. Senior policy makers at the Ministry of Finance, Ministry of Planning and line ministries are the primary audience of this work.

The Kurdistan Region of Iraq Nov 30 2019 The Kurdistan region of Iraq is facing an economic and humanitarian crisis as a result of the influx of Syrian refugees which began in 2012 and internally displaced persons (IDPs) in 2014. The region's population increased by 28 percent over a short period, placing strains on the local economy, host community, and access to public services. This book provides national and regional policy makers with a technical assessment of the impact and stabilization costs needed for 2015 associated with the influx of refugees and IDPs. The stabilization cost for 2015 is estimated at US\$1.4 billion in additional spending above and beyond the region's budget. This estimate could significantly increase should the crisis persist longer. The study highlights how prices and unemployment have increased, and refugees and IDPs entering the labor market are pushing wages down. A surge in violence led to supply side shocks. The ISIS crisis has had a significant effect on trade of goods and services. Transportation routes were disrupted. Foreign direct investment flows have declined and operations of foreign enterprises have been adversely affected. Disruption of public investment projects have had a negative impact on the economy. Based on the World Bank estimates, economic growth contracted by 5 percentage points in the region and the poverty rate more than doubled, rising from 3.5 percent to 8.1 percent. While the government has been responsive to addressing the needs of the displaced population up until now, more resources are needed to avert this humanitarian crisis and address the needs of the displaced population in the medium- and long-term. The report is an outcome of close collaboration between a wide spectrum of World Bank experts and regional government institutions and international partners.

[Measuring Stability and Security in Iraq](#) Apr 15 2021 This Report to Congress by the Defense Dept. includes specific performance indicators and measures of progress toward political, security, and economic stability in Iraq. Contents: Stability and Security in Iraq; Iraqi Security Forces Training and Performance; and List of Acronyms and Abbreviations. Maps, charts, tables and graphs.

Cruise Ships Oct 02 2022 Since the first commercial cruises began in the 1840s, ships have evolved into one of the world's most sophisticated, specialized, complex, and expensive type of vessel. The large modern

purpose-built cruise ships of the 1930s, the German KdF ships Wilhelm Gustloff and Robert Ley emerged as prototypes for carrying a mass-market clientele. At the other end of the scale, the exquisite 1927-built Norwegian cruise yacht Stella Polaris represents a smaller, elite type of vessel offering the ultimate in luxury. In the postwar years, the two ends of the industry have expanded dramatically and the myriad of ships built are described in detail. Analyses of design influences, descriptions of interior layouts, exterior design, machinery requirements, and cruising grounds

Pounder's Marine Diesel Engines and Gas Turbines Jul 19 2021 Pounder's Marine Diesel Engines and Gas Turbines, Tenth Edition, gives engineering cadets, marine engineers, ship operators and managers insights into currently available engines and auxiliary equipment and trends for the future. This new edition introduces new engine models that will be most commonly installed in ships over the next decade, as well as the latest legislation and pollutant emissions procedures. Since publication of the last edition in 2009, a number of emission control areas (ECAs) have been established by the International Maritime Organization (IMO) in which exhaust emissions are subject to even more stringent controls. In addition, there are now rules that affect new ships and their emission of CO2 measured as a product of cargo carried. Provides the latest emission control technologies, such as SCR and water scrubbers Contains complete updates of legislation and pollutant emission procedures Includes the latest emission control technologies and expands upon remote monitoring and control of engines

Heat Transfer in Industrial Combustion Jan 01 2020 Industry relies heavily on the combustion process. The already high demand for energy, primarily from combustion, is expected to continue to rapidly increase. Yet, the information is scattered and incomplete, with very little attention paid to the overall combustion system. Designed for practicing engineers, Heat Transfer in Industrial Combustion e

Modern Methods of Construction Design Mar 03 2020 This book has been created on the basis of contributions to the 54th International Conference of Machine Design Departments that was held for the 60th anniversary of Technical University of Liberec. This international conference which follows a tradition going back more than 50 years is one of the longest-running series of conferences held in central Europe, dealing with methods and applications in machine design. The main aim of the conference was to provide an international forum where experts, researchers, engineers and industrial practitioners, managers and Ph.D. students could meet, share their experiences and present the results of their efforts in the broad field of machine design and related fields. The book has seven chapters which focus on new knowledge of machine design, optimization, tribology, experimental methods and measuring, engineering analyses and product innovation. Authors presented new design methods of machine parts and more complex assemblies with the help of numerical methods such as FEM. Research, measurements and studies of new materials, including composites for energy-efficient constructions are also described. The book also includes solutions and results useful for optimization and innovation of complex design problems in various industries.

Structure and Modeling of Complex Petroleum Mixtures Apr 03 2020 Chemical structure and bonding. The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements. It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures, molecular electronics, designed molecular solids, surfaces, metal clusters and supramolecular structures. Physical and spectroscopic techniques used to determine, examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves. Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant. The individual volumes in the series are thematic. The goal of each volume is to give the reader, whether at a university or in industry, a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience.
