Blue Pelican Java Oct 25 2022 "Blue Pelican Java" is a somewhat unusual high school computer science textbook. Most computer science texts will begin with a section on the history of computers followed with a flurry of definitions that are just "so many words" to the average student. The approach here is to first give the student some experience upon which to hang the definitions that come later. The usual practice of introducing classes and objects is deferred until the student has a firm grasp of the fundamentals (loops, decision structures, etc). Thus, the beginning student is not overwhelmed by the simultaneous introduction of OOPs and the fundamentals. The book includes plenty of exercises (many in "contest" form), programming projects, and a huge appendix.

Walker Evans Oct 01 2020 "As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose temperament was distinctly at odds with Beals's impassioned rhetoric. Evans's photographs of Cuba were made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket.

Beethoven's Wig Sing Along Piano Classics

Feb 17 2022 Inspired and wildly imaginative, "Beethoven's Wig Sing Along Piano Classics" are zany, stick-in-your-head lyrics set to masterpieces by great composers. The lyrics are filled with fact and fancy about the composers and their music opening a door to serious music that's fun. It's fun to play and sing along! The music for each piano piece is presented as it was originally written by the composer. As a bonus, there is an appendix with pieces transposed into the keys used on Beethoven's Wig recordings. This allows pianists to play and sing along with the recorded tracks. BEETHOVEN'S WIG is the creation of Richard Perlmutter, who is the lyricist, lead singer and producer of the group's five albums. Beethoven's Wig has toured North America and performed at arts centers and with symphony orchestras. The group's recordings have won 50 awards including including four GRAMMY Nominations. They have also won Parent's Choice Awards, Teacher's Choice

Awards and been designated as "Notable Recordings" by the American Library Association. CONTENTS: Beep, Beep, Beep (Moonlight Sonata, Beethoven), Just For Elise (Für Elise, Beethoven), La De Da Sonata (Sonata in C, Mozart), A Piano Is Stuck In The Door (The Entertainer, Joplin), My Little Chicken (Chopsticks, de Lulli), Poor Uncle Joe (Funeral March, Chopin), A Fan of Chopin (Prelude Op. 28, No 7, Chopin), Mozart Makes Kids Smart (Alla Turca, Mozart), Minuet For My Pet (Minuet In G, Beethoven), Dvorak The Czechoslovak (Humoresque No. 7, Dvorak), Franz Liszt The Famous Pianist (Hungarian Rhapsody No. 2, Liszt), I Can't Sleep (Lullaby, Brahms), I Like Art (Promenade From Pictures At An Exhibition, Mussorgsky)

Breaking the Godspell Mar 26 2020 In BREAKING THE GODSPELL, "It is gratifying that Neil Freer has set out to probe what the recognition of the existence and Earth-visits of the Nefilim can mean not just to scientists and theologians, but to each human being upon this planet Earth". Zecharia Sitchin, author of The 12th Planet.

308 Circuits Jun 09 2021 This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas. The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.

Fight for the Sky Nov 02 2020 Pen & Sword Books are proud to be re-issuing this the only book that the legendary 'legless' ace Douglas Bader (immortalised by the film Reach For The Sky) wrote. He tells the inspiring story of the Battle of Britain from the viewpoint of 'The Few'. Using superb illustrations he traces the development of the Spitfire and Hurricane and describes the nail-biting actions of those who flew them against far superior numbers of enemy aircraft. As an added bonus, other well-known fighter aces including Johnnie Johnson, 'Laddie' Lucas and Max Aikten contribute to Douglas's book, no doubt out of affection and respect. This is a really important contribution to RAF history by one of the greatest -and certainly the most famous - pilot of the Second World War.

The Alignment Problem Sep 24 2022 'Vital reading. This is the book on artificial intelligence we need right now.' Mike Krieger, cofounder of Instagram Artificial intelligence is rapidly dominating every aspect of our modern lives influencing the news we consume, whether we get a mortgage, and even which friends wish us happy birthday. But as algorithms make ever more decisions on our behalf, how do we ensure they do what we want? And fairly? This conundrum - dubbed 'The Alignment Problem' by experts - is the subject of this timely and important book. From the AI program which cheats at computer games to the sexist algorithm behind Google Translate, bestselling author Brian Christian explains how, as AI develops, we rapidly approach a collision between artificial intelligence and ethics. If we stand by, we face a future with unregulated algorithms that propagate our biases - and worse - violate our most sacred values. Urgent and fascinating, this is an accessible primer to the most important issue facing AI researchers today.

The Real Projective Plane Dec 15 2021 Along with many small improvements, this revised edition contains van Yzeren's new proof of

Pascal's theorem (§1.7) and, in Chapter 2, an improved treatment of order and sense. The Sylvester-Gallai theorem, instead of being introduced as a curiosity, is now used as an essential step in the theory of harmonic separation (§3.34). This makes the logi cal development self-contained: the footnotes involving the References (pp. 214-216) are for comparison with earlier treatments, and to give credit where it is due, not to fill gaps in the argument. H.S.M.C. November 1992 v Preface to the Second Edition Why should one study the real plane? To this question, put by those who advocate the complex plane, or geometry over a general field, I would reply that the real plane is an easy first step. Most of the prop erties are closely analogous, and the real field has the advantage of intuitive accessibility. Moreover, real geometry is exactly what is needed for the projective approach to non· Euclidean geometry. Instead of introducing the affine and Euclidean metrics as in Chapters 8 and 9, we could just as well take the locus of 'points at infinity' to be a conic, or replace the absolute involution by an absolute polarity.

God Games Dec 23 2019 "Then came Neil Freer (who) undertook a different kind of mind-boggling task. If all that I had concluded was true, he said, what does it all mean not to the human race and the planet in general -- what does it mean to the individuals, to each one of us? He titles his new book God Games. But, if all the above is the Truth, it is not a game." Zecharia Sitchin (From the Introduction). This new book by Neil Freer, author of Breaking the Godspell, outlines the human evolutionary scenario far into the future. We are a genetically-engineered race with a dual racial heritage. Our half-Terran, half-alien genes place us on an accelerated, unique evolutionary path, already eagerly emerging from racial adolescence. Freer describes what's in store for us as this dawning genetic enlightenment reveals the new human and the racial maturity of a new planetary civilization on the horizon. We all can contribute to our racial future as we evolve from a slave species to far beyond what we could previously even imagine. The godspell broken, we new humans will create our own realities and play our own "god games." Once we understand our true genetic history we will eventually move beyond the gods, religion, linear consciousness and even death. The subtitle. What do you do forever?, inspires us to contemplate how things like four-dimensional consciousness, the realization of a Law of Everything and the option of immortality will enable the new human to determine his own evolutionary path. It is quite possible that great thinkers in the future will look back on this book, in particular, as being the one which opened the door to our full evolutionary potential and a new paradigm. Neil Freer is a brilliantphilosopher focused on the freedom of the individual and what it means to be truly human. This book will make you think in new and different ways. Accept the challenge of God Games and you will be greatly rewarded.

Forbidden Science Apr 26 2020 The contributors to this collection offer an essential introduction to the ways in which feminist linguistics and critical discourse analysis have

contributed to our understanding of gender and sex. By examining how these perspectives have been applied to these concepts, the contributors provide both a review of the literature, as well as an opportunity to follow the most recent debates in this area. Gender and Discourse brings together European, American and Australian traditions of research. Through an analysis of a range of `real' data, the contributors demonstrate the relevance of these theoretical and methodological insights for gender research in particular and social practice in general.
