Genetics and the Behavior of Domestic Animals Aug 30 2022 Behavior is shaped by both genetics and experience—nature and nurture. This book synthesizes research from behavioral genetics and animal and veterinary science, bridging the gap between these fields. The objective is to show that principles of behavioral genetics have practical applications to agricultural and companion animals. The continuing domestication of animals is a complex process whose myriad impacts on animal behavior are commonly under-appreciated. Genetic factors play a significant role in both species-specific behaviors and behavioral differences exhibited by individuals in the same species. Leading authorities explore the impact of increased intensities of selection on domestic animal behavior. Rodents, cattle, pigs, sheep, horses, herding and guard dogs, and poultry are all included in these discussions of genetics and behavior, making this book useful to veterinarians, livestock producers, laboratory animal researchers and technicians, animal trainers and breeders, and any researcher interested in animal behavior. Includes four new chapters on dog and fox behavior, pig behavior, the effects of domestication and horse behavior Synthesizes research from behavioral genetics, animal science, and veterinary literature Broaches fields of behavior genetics and behavioral research Includes practical applications of principles discovered by behavioral genetics researchers Covers many species ranging from pigs, dogs, foxes, rodents, cattle, horses, and cats

Mineral Tolerance of Animals Nov 28 2019 Excess minerals in the diet and water of animals can have an adverse effect on animal health, consumers, and the environment. Preventing unsafe mineral exposure is a fundamental part of animal nutrition and management. At the request of the Food and Drug Administration, the National Academies convened a committee to make recommendations on animal tolerances and toxic dietary levels, updating a 1980 report on mineral tolerance in domestic animals. Based on a review of current scientific data and information, the report sets a "maximum tolerable level" (MTL) for each mineral as it applies to the diets of farm animals, poultry, and fish. The report includes an analysis of the effects of toxic levels in animal diets, and it identifies elements that pose potential human health concerns. The report recommends research that includes a better characterization of animal exposure to minerals through feedstuffs; a better understanding of the relationship between mineral concentrations in feed and water and the levels in consumer products such as meat, milk, and eggs; and more research on the maximum tolerable level of minerals for aquatic and companion animals.

Domestic Animals and Leisure Oct 20 2021 This volume offers both an insight into the current state of research on domestic animals in leisure and a lens through which to begin to chart the future of research in this field. Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Domestic Animals Jan 23 2022 Sometimes, the most dangerous animals are the ones you let inside. When a man hires Emery Hazard to track down a teenager who, he claims, robbed him, Hazard isn't convinced. The story has holes in it, and the client seems eager—too eager—to keep the authorities from getting involved. But Hazard is willing to play along; he suspects something much darker is going on, and he wants to know what it is. Then his husband, John-Henry Somerset, connects the boy in question to an ongoing suspicious death investigation, and both men realize they've stumbled upon something much more complicated. There are too many loose threads: missing money, stolen jewelry, a husband back from the dead, and a string of violent assaults on men paying for sex. And there are too many people with their own agendas. After Hazard's client turns up dead, though, the pressure is on. The killer isn't done yet, and the closer Hazard and Somers come to unearthing the connection between the victims, the greater the danger. They find themselves in a race to uncover the truth before another victim is claimed—and, if Somers is really lucky, in time for him to plan the perfect Valentine's Day.

Parasitic Infections of Domestic Animals Apr 25 2022 The manual is intended as a tool for the identification and control of the wide spectrum of parasites affecting domestic animals throughout the world. On another practical level, it is relevant for meat inspectors and other public health officials to identify parasites in domestic animals which are potentially harmful to humans.

Pyrantel Parasiticide Therapy in Humans and Domestic Animals Mar 01 2020 *Pyrantel Parasiticide Therapy in Humans and Domestic Animals* presents a single source history and reference on the parasiticide activity and pharmacology of the tetrahydropyrimidines and their salts in humans and domestic animals, also collating evidence that resistance to pyrantel has developed in human and domestic animal nematodes. Other books of this nature have been compiled historically for specific anthelmintic compounds, but none has been written to date for the pyrantel family of drugs. Pyrantel, a nicotinic receptor agonist, has been used in domestic animal and human medicine since the 1970's to control two important nematode groups, the hookworms and the roundworms. Given the zoonotic potential of these parasites, pyrantel has served a dual role in helping to protect the health of both domestic animals and the public for more than 45 years. Easy-to-use reference guide on the anthelmintic pyrantel for clinicians, parasitologists, and researchers in human and veterinary medicine Addresses

current issues of resistance, along with combination uses against anthelmintic resistant parasites Presents useful, authoritative information (chemical, pharmaceutical, clinical, etc.) for the pyrantel family of compounds Includes a discussion on pyrantel's potential role in combination therapies Provides cutting-edge material, and will be an evolving area of scientific discussion of treatment options in the future

A Text Book on Tumors of Domestic Animals Sep 06 2020

Physiology of domestic animals Mar 13 2021

Tumors in Domestic Animals Jun 27 2022 Since the third edition of Tumors of Domestic Animals there has been an enormous expansion of our knowledge about the molecular mechanisms of tumor development and the ancillary aids used to diagnose neoplasms. The fourth edition condenses this new body of information and presents it in a way that is useful to diagnostic pathologists, residents, veterinarians, and oncologists. The format of the previous editions has been maintained, but the text and the illustrations are substantially changed or entirely different. Readers will be able to find salient clinical information, prevalence data, biological behavior, and most importantly, accurate information about gross and microscopic lesions to help diagnostic pathologists establish an accurate morphological diagnosis. The editor and authors of Tumors of Domestic Animals, all recognized experts in their fields, recognize the need for accurate morphological diagnoses in veterinary patient care, particularly with the numerous treatment modalities now available to oncologists and owners. This landmark reference in veterinary pathology provides the applicable information that clinical veterinarians need and want to make decisions about treatment of the animals in their care.

Domestic Animals, Humans, and Leisure Mar 25 2022 Domestic animals are an integral component of human leisure experience and can enhance the physical, social, and mental wellbeing of humans. The interplay of human and animal experiences of justice, wellbeing, rights, and roles within leisure is the central theme of this book. Research explores the position of domesticated animals in human leisure experiences, in a wide array of leisure settings. Chapters question whether domestic animals may have a desire for leisure that is different from human leisure, whether animals have and wish to fulfil needs for meaningful leisure or non-leisure, and whether human leisure needs and desires may coincide or contradict wellbeing interests of animals. This book provides a venue for the dissemination and exploration of research, which champions the welfare and rights of these animals to have their needs and interests in leisure recognised. It moves the debate about animals in leisure beyond the current limits which have seen research mainly confined to the exotic 'other' rather than more mundane, everyday domestic animals. This book will be of interest to individuals in the fields of tourism ethics, zoology, animal behaviour, and leisure studies.
