A New Paradigm for Global School Systems Jun 30 2020 This volume—a major new contribution to Joel Spring's reportage and analysis of the intersection of global forces and education—offers a new paradigm for global school systems. Education for global economic competition is the prevailing goal of most national school systems. Spring argues that recent international studies by economists, social psychologists, and others on the social factors that support subjective well-being and longevity should serve as a call to arms to change education policy; the current industrial-consumer paradigm is not supportive of either happiness or long life. Building his argument through an original documentation, synthesis, and critique of prevailing global economic goals for schools and research on social conditions that support happiness and long life, Spring: *develops guidelines for a global core curriculum, methods of instruction, and school organizations; *translates these guidelines into a new paradigm for global school systems based on progressive, human rights, and environmental educational traditions; *contrasts differing ways of seeing and knowing among indigenous, Western, and Confucian-based societies, concluding that global teaching and learning involve a particular form of holistic knowing and seeing; and *proposes a prototype for a global school—an eco-school that functions to protect the biosphere and human rights and to support the happiness and well-being of the school staff, students, and immediate community—and for a global core curriculum based on holistic models for lessons and instruction. The book concludes with Spring's retelling of Plato's parable of the cave—in which educators break the chains that bind them to the industrial-consumer paradigm and rethink their commitment to humanity's welfare.

EBOOK: Public Finance, Global Edition Sep 21 2019 Rosen and Gayer's Public Finance provides the economic tools necessary to analyze government expenditure and tax policies and, along the way, takes students to the frontiers of current research and policy. While the information presented is cutting edge and reflects the work of economists currently active in the field, the approach makes the text accessible to undergraduates whose only prior exposure to economics is at the introductory level. The authors' years of policy experience have convinced them that modern public finance provides a practical and invaluable framework for thinking about policy issues. The goal is simple: to emphasize the links between sound economics and the analysis of real-world policy problems. Enhancements and key features for this new Global Edition include:New Policy Perspectives introduce relevant and engaging examples of international policy so students can extend their understanding of theory to policymaking across the globe. New Empirical Evidence applications provide students with real-world examples that are relevant to them, from case studies about Sweden and China to global examples that compare experiences between countries. Updated end-of-chapter questions broaden critical thinking, encouraging students to apply their knowledge to international and comparative examples. The results of econometric models are used to help students understand how expenditure and tax policies affect individual behavior and how governments set policies. Integrated theory and analysis: Institutional, theoretical, and empirical material is interwoven to provide students with a clear and coherent view of how government spending and taxation relate to economic theory. Current research is presented alongside discussion of methodological and substantive controversies. The approach is modern, theoretical, and empirical, and shared by most active economists. Institutional and legal settings are described in detail, and the links between economic analysis and current political issues are emphasized. This Global Edition has been adapted to meet the needs of courses outside of the United States and does not align with the instructor and student resources available with the US edition.

Food Security and Global Environmental Change May 30 2020 Global environmental change (GEC) represents an immediate and unprecedented threat to the food security of hundreds of millions of people, especially those who depend on small-scale agriculture for their livelihoods. As this book shows, at the same time, agriculture and related activities also contribute to GEC by, for example, intensifying greenhouse gas emissions and altering the land surface. Responses aimed at adapting to GEC may have negative consequences for food security, just as measures taken to increase food security may exacerbate GEC. The authors show that this complex and dynamic relationship between GEC and food security is also influenced by additional factors; food systems are heavily influenced by socioeconomic conditions, which in turn are affected by multiple processes such as macro-level economic policies, political conflicts and other important drivers. The book provides a major, accessible synthesis of the current state of knowledge and thinking on the relationships between GEC and food security. Most other books addressing the subject concentrate on the links between climate change and agricultural production, and do not extend to an analysis of the wider food system which underpins food security; this book addresses the broader issues, based on a novel food system concept and stressing the need for actions at a regional, rather than just an international or local, level. It reviews new thinking which has emerged over the last decade, analyses research methods for stakeholder engagement and for undertaking studies at the regional level, and looks forward by reviewing a number of emerging 'hot topics' in the food security-GEC debate which help set new agendas for the research community at large. Published with Earth System Science Partnership, GECAFS and SCOPE

Human Factors of a Global Society Oct 23 2019 During the last 60 years the discipline of human factors (HF) has evolved alongside progress in engineering, technology, and business. Contemporary HF is clearly shifting towards addressing the human-centered design paradigm for much larger and complex societal systems, the effectiveness of which is affected by recent advances in engineering, science, and education. Human Factors of a Global Society: A System of Systems Perspective explores the future challenges and potential contributions of the human factors discipline in the Conceptual Age of human creativity and social responsibility. Written by a team of experts and pioneers, this book examines the human aspects related to contemporary societal developments in science, engineering, and higher education in the context of unprecedented progress in those areas. It also discusses new paradigms for higher education, including education delivery, and administration from a systems of systems perspective. It then examines the future challenges and potential contributions of the human factors discipline. While there are other books that focus on systems engineering or on a specific area of human factors, this book unifies these different perspectives into a holistic point of view. It gives you an understanding of human factors as it relates to the global enterprise system and its newly emerging characteristics such as quality, system complexity, evolving management system and its role in social and behavioral changes. By exploring the human aspects related to actual societal developments in science, the book opens a new horizon for the HF community.
