Improving Literacy in the Primary School Apr 17 2021 One of the most important challenges teachers face is making sure children can read. It is an absolutely crucial

skill, and current educational policy is giving it a very high priority. Based on one of the largest studies ever undertaken of what primary schools do to improve literacy, this book reports what Professor Ted Wragg and his research team found. The importance placed on literacy has never been greater. When children learn to read, they are laying the foundations for their entire educational future. Effective teachers can make a huge difference, as a poor start can hinder children throughout their schooling and beyond. By looking at what actually goes on in classrooms, this volume provides an invaluable insight into what happens to children and how their reading progresses. It shows how particular teachers manage the improvement of their pupils' reading levels, and also follows individual pupils through a school year. This is a very readable account of a fascinating and crucial area of research that is highly topical. Every class teacher should read it.

Learner Autonomy in Language Learning May 19 2021 This book is a collection of papers that explores the notion of learner autonomy and the problem of helping language learners to manage their learning effectively. The first part of the book deals with issues of definition: what is the cognitive base for autonomous learning behaviour and how is this mediated by social and cultural expectations of a learner's role? The second part reports on experiences of working with learners and with teachers to promote learner autonomy. In working with learners, the focus is on language learning strategies and how strategic learning might be developed through strategy training, materials design, reflection and counselling. In working with teachers, the focus is on bringing about change in traditional perspectives on the roles of learners and teachers within education systems.

The Future of Nursing Oct 24 2021 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the

full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
