Locomotives of the Liverpool and Manchester Railway Apr 14 2021 The Liverpool & Manchester Railway was Britain's first mainline, intercity railway; opened in 1830 it was at the cutting edge of railway technology. Engineered by George Stephenson and his team – John Dixon, William Allcard, Joseph Locke – the project faced many obstacles both before and after opening, including local opposition and the choice of motive power, resulting in the Rainhill Trials of 1829. Much of the success of the line can be attributed to the excellence of its engineering but also its fleet of pioneering locomotives built by Robert Stephenson & Co. of Newcastle. This is the story of those locomotives, and the men who worked on them, at a time when the locomotive was still in its infancy. Using extensive archival research, coupled with lessons learned from operating early replica locomotives such as Rocket and Planet, Anthony Dawson explores how the locomotive rapidly developed in response to the demands of the first intercity railway, and some of the technological dead ends along the way.

One More Glimpse: Steam in the British Landscape Feb 10 2021 Stunning original full-page photographs showing steam locomotives in the beautiful British landscape. Main line steam officially ended on British Railways in 1968. Fortunately, steam has continued on preserved railways and even on the modern main line, and the essence of everyday steam working can still be captured. Here, father and son team Robin and Tailiesin Coombes document their search for one more glimpse of the magic of steam power on the rails of Great Britain. This evocative collection of more than 120 photographs show that the majesty of steam lives on. From express passenger trains storming up Ais Gill to quiet rural branch lines, from working steam sheds to goods trains trundling past, this book is sure to delight anyone who enjoys the sight of a classic locomotive at work.

From Popular Liberalism to National Socialism Oct 21 2021 **'Long live liberty, equality, fraternity and dynamite' So went the traditional slogan of the radical liberals in Greater Swabia, the south-western part of modern Germany. This book investigates the development of what the author terms 'popular liberalism' in this region, in order to present a more nuanced understanding of political and cultural patterns in Germany up to the early 1930s. In particular, the author offers an explanation for the success**

of National Socialism before 1933 in certain regions of South Germany, arguing that the radical liberal sub-culture was not subsumed by the Nazi Party, but instead changed its form of representation. Together with the famous völkish fraction and the leftist fraction within the chapters of the Nazi Party, there were radical-liberal associations, ex-members of radical-liberal parties, sympathizers with these parties, and notables with a radical orientation derived from family and regional traditions. These people and associations believed that the Nazi Party could fulfil their radical - liberal vision, rooted in the local democratic and liberal traditions which stretched from 1848 to the early 20th century. By looking afresh at the relationship between local-regional identities and national politics, this book makes a major contribution to the study of the roots of Nazism.

Native Plants for Southwestern Landscapes Feb 22 2022 For gardeners who want to conserve water, the color, fragrance, shade, and lush vegetation of a traditional garden may seem like a mirage in the desert. But such gardens can flourish when native plants grow in them. In this book, Judy Mielke, an expert on Southwestern gardening, offers the most comprehensive guide available to landscaping with native plants. Writing simply enough for beginning gardeners, while also providing ample information for landscape professionals, she presents over three hundred trees, shrubs, vines, grasses, groundcovers, wildflowers, cacti, and other native plants suited to arid landscapes. The heart of the book lies in the complete descriptions and beautiful color photographs of plants native to the Mojave, Sonoran, and Chihuahuan desert regions of the southwestern United States and northern Mexico. Mielke characterizes each plant and gives detailed information on its natural habitat, its water, soil, light, temperature, and pruning requirements, and its possible uses in landscape design. In addition, Mielke includes informative discussions of desert ecology, growing instructions for native plants and wildflowers, and "how-to" ideas for revegetation of disturbed desert areas using native plants. She concludes the book with an extensive list of plants by type, including those that have specific features such as shade or fragrance. She also supplies a list of public gardens that showcase native plants.

Chiltern Railways Oct 01 2022 This book, uniquely, gives an insight to the business strategy and its

delivery that underpinned the performance of one of Rail Privatisation's greatest successes. It also shows the reader some of the many 'behind the scenes' jobs which are essential to the functioning of a railway but which are rarely seen by outsiders. Throughout, it demonstrates that a railway, like many other endeavours, is a team effort. Every employee is just as important as the boss. He can have a day off and it all still works. If a driver or a maintenance fitter, working on their own, make a mistake all hell can be let loose. At a time of change, partly brought about by Covid, this book gives strong clues as to how the Nation's railways might be more efficiently organised and run. It is easy to read and copiously illustrated.

London and South Western Railway Miscellany May 28 2022 Of the three major companies that came together to form the Southern Railway in 1923, the London & South Western Railway was by far the largest in terms of geographical spread, serving as it did much of southern and southwestern England. From its impressive terminus at Waterloo, suburban and express services passed through the Metropolitan outskirts before the latter headed towards Hampshire, Dorset, Wiltshire, Somerset, Devon and Cornwall. A pioneer in the use of electric traction, much of its suburban network had been electrified before 1923, while at the other extreme, there were still locomotives operational in Cornwall in 1923 that were already 50 years old. For many, the LSWR came to represent the holiday season, serving as it did many of the coastal resorts of the region, such as Bournemouth, Weymouth, Padstow, Bude and Ilfracombe. For the enthusiast, the LSWR produced some of the most stylish locomotive designs of the period; the classic lines of the 'T9' 4-4-0 for example, or the more unusual Beattie well tanks. A railway is, however, more than just its locomotives. It is also the stations, the staff, the carriages and wagons, the tunnels and viaducts, the signalling and much else. For a modeller, seeking to recreate the past, information on these various aspects is as essential to completing a project as information about locomotive numbers and names. In his latest book for Ian Allan Publishing, John Scott Morgan, who has collected an astonishing collection of photographs featuring the LSWR over the years, has selected his own and other archives to provide a pictorial record of the LSWR in the period leading up to the Grouping in 1923. The book covers the full range of LSWR activity, including signalling and operations, providing readers with a pictorial record of one of the most important of the pre-Grouping companies.

The Railway Goods Shed and Warehouse in England Sep 19 2021 Although goods traffic accounted in many cases for a higher proportion of railway companies' revenue than passengers, the buildings associated with it have received very little attention in comparison to their passenger counterparts. They once played as important a role in distribution as the 'big sheds' near motorway junctions do today. The book shows how the basic design of goods sheds evolved early in the history of railways, and how the form of goods sheds reflected the function they performed. Although goods sheds largely functioned in the same way, there was considerable scope for variety of architectural expression in their external design. The book brings out how they varied considerably in size from small timber huts to the massive warehouses seen in major cities. It also looks at how many railway companies developed standard designs for these buildings towards the end of the 19th century and at how traditional materials such as timber, brick and stone gave way to steel and concrete in the 20th. This building type is subject to a high level of threat with development pressure in urban and suburban areas for both car parking and housing having already accounted for the demise of many of these buildings. Despite this, some 600 have been identified as still extant and the book will, for the first time, provide a comprehensive gazetteer of the surviving examples.
