Evo-SETI Apr 11 2021 This
book offers a vision of how
evolutionary life processes can
be modelled. It presents a
mathematical description that
can be used not only for the full
evolution of life on Earth from
RNA to modern human
societies, but also the possible
evolution of life on exoplanets,
thus leading to SETI, the
current Search for
ExtraTerrestrial Intelligence.
The main premise underlying
this mathematical theory is that
the Geometric Brownian
Motion (GBM) can be applied

as a key stochastic process to
model the evolution of life. In
the resulting Evo-SETI Theory,
the life of any living thing (a
cell, an animal, a human, a
civilization of humans, or even
an ET civilization) is
represented by a b-lognormal,
i.e., a lognormal probability
density function starting at a
precise instant (b, birth) then
increasing up to a peak time,
then decreasing to senility time
and then continuing as a
straight line down to the time
of death. Using this theory,
Claudio Maccone arrives at
remarkable hypotheses on the
development of life and
civilizations, the possibility of
extraterrestrial life, and when
computers will take over the
