Egypt, Lebanon and Iraq. Institutional forms of exhibiting and teaching art emerged in the Middle East and North Africa in late colonial and early post-colonial contexts. The book examines how the salon had an impact on the formation of taste and on debates on art, and discusses the transfers and cultural interactions between the Middle East, North Africa and Europe. Following the institutional model of the Paris salons, art salons emerged in Algiers, Tunis and Cairo starting in the late 1880s. In Beirut, the salon tradition reached its peak only after independence in the mid-twentieth century. Baghdad never had a formal salon, but alternative spaces and exhibition formats developed in Iraq from the late 1940s onwards. As in Paris, the salons in the region often defined the criteria of artistic production and public taste. The impact of the salon also lay in its ability to convey particular values, attitudes and aspirations. At the same time, the values and attitudes promoted by the salon as well as the salon itself were often subject to debate, which led to the creation of counter-salons or alternative exhibition practices. The art salon helps us to understand changes in the art systems of these countries, including the development of art schools, exhibition spaces and artist societies, and gives insight into the power dynamics at play. It also highlights networks and circulations between the Arab region and Europe.

**Human Ecodynamics** Jan 15 2021 The papers in this book were first presented at the Association for Environmental Archaeology conference at Newcastle upon Tyne in 1998. The aim of the conference was to encourage contributors to examine the inter-relationships between classes of data that have increasingly come to be treated in isolation and to encourage thinking about theory in environmental archaeology. Authors have focused on explicit development of theory, others on bridging barriers between different fields of study or classes of evidence. The notion that people are influenced, but not necessarily determined, by the environments in which they live, may seem like a truism, but an ecodynamic perspective however requires us to question the human impact on the environment, disregarding agricultural influences. *Human Ecodynamics* discuss how people have been affecting, and affected by environmental variables around them since the beginning of time. Archaeologists are peculiarly well placed to link culture and nature together as the discipline discerns thriving socio-cultural and biological traditions. This thinking is applied to the way in which we conduct our studies of the world around us, and to the boundaries between the various disciplines and sub-disciplines into which we sub-divide the subject matter of investigation.

**Human Malformations and Related Anomalies** Nov 12 2020 This widely acclaimed reference work gives a comprehensive survey of all significant human malformations and related anomalies from the perspective of the clinician. The anomalies are organized by anatomical system and presented in a consistent manner, including details of the clinical presentation, epidemiology, embryology, treatment and prevention for each anomaly. When known, the molecular or other pathogenetic basis for the malformation is given.

Most anomalies are illustrated by photographs or drawings. Specific malformations are linked to syndromes through the extensive use of differential diagnosis tables. Over a decade has passed since the first edition of this book was published, and the revised edition fully incorporates the advances made in the field during the intervening years. It reflects new understanding of human developmental biology that has emerged from molecular, cytogenetic, and biochemical studies; new observations by clinicians as well as enhanced diagnostic and prevention capacities; and more accurate and comprehensive epidemiology. By condensing much of the information presented in the first volume of the previous edition, and exercising rigorous editorial control, Drs. Stevenson and Hall and their contributors have managed to update the book while reducing its size to that of a single volume. All clinicians and scientists interested in birth defects, including pediatricians, geneticists, genetic counselors, obstetricians, and pediatric pathologists, will find this book to be an invaluable source of information.

**Destruction and human remains** Oct 12 2020 This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. Destruction and human remains investigates a crucial question frequently neglected in academic debate in the fields of mass violence and genocide studies: what is done to the bodies of the victims after they are killed? In the context of mass violence, death does not constitute the end of the executors' work. Their victims' remains are often treated and manipulated in very specific ways, amounting in some cases to true social engineering, often with remarkable ingenuity. To address these seldom-documented phenomena, this volume includes chapters based on extensive primary and archival research to explore why, how and by whom these acts have been committed through recent history. Interdisciplinary in scope, Destruction and human remains will appeal to readers interested in the history and implications of genocide and mass violence, including researchers in anthropology, sociology, history, politics and modern warfare. The research program leading to this publication has received funding from the European Research Council under the European Union's Seventh Framework Programme (FP/2007-2013) / ERC Grant Agreement n° 283-617.

**The SAGES Manual of Bariatric Surgery** Feb 13 2021 Morbid obesity is an epidemic as more than 2/3 of the United States population is obese and as such, has a high burden of weight-related co-morbid diseases. Bariatric surgery has proven to be effective and durable for treatment of severe obesity. Technological advances including applications of laparoscopy and endoluminal techniques have rapidly advanced this field. Data and outcomes examining treatments have also improved and as providers, we have a wide spectrum of therapeutic options to treat patients. As techniques and outcomes have evolved, access to a comprehensive yet focused resource regarding bariatric surgery is currently limited. The proposed textbook is designed to present a comprehensive and state-of-the-art approach to the current and future status of Bariatric interventions, which has changed significantly since the first edition of the Manual. Updates in this version will include the rapidly expanding field of endoluminal bariatric procedures, with a focus on new devices and theories of mechanisms. New data regarding laparoscopic approaches to treat obesity, as well as improved longer-term data outcomes will be reviewed. Newer surgical approaches to treat metabolic disease and obesity are included, as well as proposed mechanisms of action and efficacy. Additional new sections include sections on the application of robotic technologies, special circumstances including transplantation and pregnancy, and telemedicine and social media in bariatric surgery. Sections will address the evolution in specific treatments available to patients, initial evaluation and selection of procedures for individual patients, the latest surgical and endoscopic techniques being employed to treat patients including data on outcomes, and future directions for therapy.

In particular and unique amongst references, a major focus of this text will be on both the bariatric and metabolic bases of therapies and outcomes. The SAGES Manual A Practical Guide to Bariatric Surgery, Second Edition aligns with the new SAGES UNIVERSITY MASTERS Program. The Manual supplements the Bariatric Surgery Pathway from Competency to Proficiency to Mastery. Postoperative care is also addressed, and a concluding section considers anesthesia outside the cardiac operating room. In the twenty-first century, advances in minimally invasive technology have led to the introduction of a wide array of pediatric cardiac procedures. Mothers in the Fatherland Aug 10 2020 From extensive research, including a remarkable interview with the unrepentant chief of Hitler's Women's Bureau, this book traces the roles played by women - as followers, victims and resisters - in the rise of Nazism. Originally publishing in 1987, it is an important contribution to the understanding of women's status, culpability, resistance and victimisation at all levels of German society, and a record of astonishing ironies and paradoxical morality, of compromise and courage, of submission and survival.

Telemedicine in the ICU Apr 29 2022 This text provides a concise, yet comprehensive overview of telemedicine in the ICU. The first part of the book reviews common issues faced by practitioners and hospital administrators in implementing and managing tele-ICU programs, including the merits of different staffing models, the challenges of building homegrown programs versus contracting for services, and the impact of state laws and payer policies on reimbursement for tele-ICU services. The second part of the book presents the current state of

evidence for and against ICU telemedicine, based on clinical trials, before-and-after implementation studies, and observational data. The third part dives deeper into specific use cases for telemedicine in the ICU, including telestroke, pediatric and cardiac intensive care, and early treatment of declining patients with sepsis. Written by experts in the field, *Telemedicine in the ICU* is a practical guide for intensive care physicians and hospital administrators that provides all the information necessary in building and maintaining a successful tele-ICU program.

Beyond Coherence Jan 27 2022 The overarching theme of this volume is one of the central concerns of syntactic theory: How local is syntax, and what are the measures of syntactic locality? It is argued here that movement and anaphoric relations are governed by a unified concept of locality: the phase. On an empirical level, *Beyond Coherence* brings together three strands of research on German syntax: 'coherence', the study of (reduced) infinitive constructions; the possessor dative construction, with a dative nominal playing the dual role of possessor and affectee; and binding, the distribution of anaphors and pronominals. These apparently disparate areas of research intersect in that the locality constraints on the possessor dative construction and binding allow the two phenomena to serve as probes for infinitival clause size. Offering a Minimalist 'possessor raising' and phase-based binding account, this work culminates in a discussion of the phase as the key to the various opacity effects observed in the book.
