AI and education Jun 15 2021 Artificial Intelligence (AI) has the potential to address some of the biggest challenges in education today, innovate teaching and learning practices, and ultimately accelerate the progress towards SDG 4. However, these rapid technological developments inevitably bring multiple risks and challenges, which have so far outpaced policy debates and regulatory frameworks. This publication offers guidance for policy-makers on how best to leverage the opportunities and address the risks, presented by the growing connection between AI and education. It starts with the essentials of AI: definitions, techniques and technologies. It continues with a detailed analysis of the emerging trends and implications of AI for teaching and learning, including how we can ensure the ethical, inclusive and equitable use of AI in education, how education can prepare humans to live and work with AI, and how AI can be applied to enhance education. It finally introduces the challenges of harnessing AI to achieve SDG 4 and offers concrete actionable recommendations for policy-makers to plan policies and programmes for local contexts. Issues in Pension Funding (Routledge Revivals) Jun 03 2020 First published in 1992, this book explains how pension funds work in order to highlight their impact on the economy as a whole. David Blake explores the different systems in operation at the time of writing, both state run and private sector, and describes policy initiatives such as personal pension schemes. Longer life-expectancy, overseas investment, equal opportunities and short-termism in capital markets are among the issues discussed as David Blake assesses how pension funds typically behave. This is a title of continued relevance, which addresses the questions repeatedly raised within government and wider society.

Corporate Governance and Institutional Investment Dec 22 2021 Corporate Governance and Institutional Investment focuses on corporate governance and the legal nature of institutional investors in the corporate system. Its aim is to expose the complexity of the relationships that exist between companies on one side, and their shareholders, stakeholders, and monitors on the other. Various types of investors, including trusts and companies, are discussed, including how they function under different legal guidelines. The role of investment managers acting on the behalf of institutional investors is examined, as well as why fund managers overlook the corporate governance problems of their investee's companies when they are performing well financially. This complexity is one of the main reasons why corporate scandals still occur, despite the existence of an extensive academic literature on corporate governance and the sustained efforts by the corporate community around the world. An analysis of how the monitoring role of institutional investors became effective in the light of company law and trusts is presented by using a comparative model involving the U.K., the U.S.A., Pakistan, and continental Europe. Financial scandals of the last decade such as Enron, Northern Rock, and the banking crisis are also examined. Finally, a review of regulatory approaches which rely upon formal rules and institutions backed by the state legal system, and non-regulatory approaches emphasizing the market mechanism and contractual arrangements, is included.

Roundabouts Jun 23 2019 TRB's National Cooperative Highway Research Program (NCHRP) Report 672: Roundabouts: An Informational Guide - Second Edition explores the planning, design, construction, maintenance, and operation of roundabouts. Real Estate Appraisal Jul 29 2022 The education of the real estate professional is changing and aligning itself more closely with the world of business. This book takes a new approach to property appraisal by exploring the pricing mechanism in this changing context. It: * develops the notion of the pricing mechanism in relation to property * covers practical issues of comparison and the real problems in applying valuation theory * explores calculations - including social and environmental worth - ignored in other texts As real estate professionals now advise both on strategic and operational aspects of built assets, they must take into account practices of other investment markets and see investors as competitors to owner-occupiers. Both owner-occupiers and investors have to assess accurately how their buildings perform but also be aware of wider sustainability issues, and social and environmental responsibilities. Real Estate Appraisal: from value to worth meets these new demands by examining the latest techniques of the marketplace; developing an understanding of both market appraisal and worth; and highlighting the emerging role of sustainability as a driver for decision-making in real estate. Written by a group of highly experienced lecturers and professionals at the cutting edge of investment practice, the book has an accessible style and authoritative coverage, for both students and practitioners facing changes in established ways of working. Financing Nonprofits Aug 18 2021 Nonprofits often struggle financially, overwhelmed by the need to muster a complex combination of income streams that range from grants and government funding to gifts-in-kind and volunteer labor. *Financing Nonprofits* draws upon a growing body of scholarship in economics and organizational theory to offer a conceptual framework for understanding this diverse mix of financing sources. By applying theory, readers can understand when a nonprofit organization should pursue particular sources of income and how it should manage its portfolio of income from different sources. Organized under the auspices of the National Center on Nonprofit Enterprise, *Financing Nonprofits* argues that those who would manage nonprofit organizations must first develop a conceptual framework through which they can understand the complicated and fast-paced landscape surrounding nonprofit decision-making. It offers a piece by piece analysis of the many potential components of nonprofit operating income, including a detailed study on how to accumulate the capital needed for major infrastructure projects or endowments and an examination of how to maintain a healthy investment profile once sufficient capital exists. By melding theory with practice, Young and the other contributors to *Financing Nonprofits* have created a volume that will serve as a practical guide to financing strategies for executive directors, CFOs, and board members of nonprofit organizations in a wide variety of fields; as a text for graduate students in nonprofit finance; and as a source of ideas for researchers to continue to probe and illuminate the many subtle issues associated with finding the right mix of resources to support the essential work of nonprofit organizations in our society.

The Alchemy of Air Jan 29 2020 A sweeping history of tragic genius, cutting-edge science, and the Haber-Bosch discovery that changed billions of lives—including your own. At the dawn of the twentieth century, humanity was facing global disaster: Mass starvation was about to become a reality. A call went out to the world's scientists to find a solution. This is the story of the two men who found it: brilliant, self-important Fritz Haber and reclusive, alcoholic Carl Bosch. Together they discovered a way to make bread out of air, built city-sized factories, and saved millions of lives. But their epochal triumph came at a price we are still paying. The Haber-Bosch process was also used to make the gunpowder and explosives that killed millions during the two world wars. Both men were vilified during their lives; both, disillusioned and disgraced, died tragically. The Alchemy of Air is the extraordinary, previously untold story of a discovery that changed the way we grow food and the way we make war—and that promises to continue shaping our lives in fundamental and dramatic ways.
