Accident/Incident Prevention Techniques, Second Edition Mar 04 2020 Published more than ten years ago, the first edition of Accident/Incident Prevention Techniques provided clear, comprehensive guidance on how to mitigate the cost, in personnel and to the bottom line, of accidents/incidents in the workplace. Significantly revised and updated, this Second Edition takes its place as the A to Z hands-on guide to the responsibilities, principles, tools, and techniques involved in accident investigative planning and preparation. Written by safety expert Charles D. Reese, the book details tried and true techniques that have been used by the occupational safety and health community for many years. It also presents the best theoretical methods to help those responsible for occupational safety develop the best prevention initiative for them and their workforce. Based on the premise that all businesses and industries must face the reality that occupational accidents and illnesses will transpire and the results of these events will have a negative impact on the company's bottom line, the book provides practical examples, easy-to-implement processes, numerous illustrations, and usable forms throughout. See What's New in the Second Edition Topics such as safety culture and behavior-based safety Expanded coverage of some topics such as analysis tools and accident investigation Updated statistical data, sources, and contacts Updated changes in regulations and compliance Relevance with current trends and issues in accident prevention By

investigating the various methods and equipment used in system safety applications, the book covers a myriad of accident/incident prevention techniques and supplies the illustrations and tools that allow readers to begin to develop and build a safety and health program in their workplace. The author draws on his more than 30 years of experience to supply a template for the development of an effective safety and health program.

Teaching Political Science to Undergraduates Jan 26 2022 By 2020, half of the world's population and most university students will have a supercomputer in their pockets. This revolution will affect the way students respond to higher education. The university classroom must henceforth engage students, and the classic lecture format alone might not be enough to do so. This book answers the question how university students can learn in the classroom what they cannot learn in any other way. The answer is inspired by options that are not available to political scientists - in the way that they are in the laboratories for the sciences, in the performances for the live arts, and in the studios for visual arts - as well as ideas that are already present, but not widespread in the discipline: problem-solving and case studies, as in the professional schools, and simulation exercises in many other disciplines. This book proposes therefore an active pedagogy for political science, at a time when active pedagogy is more important than ever. Prof. Laure Paquette, PhD, has been a visiting researcher or professor in 23 countries. She has advised several foreign governments as well as her own, Canada, and has published extensively in four languages. This is her sixteenth book.

Predictive Evaluation Aug 21 2021 This work supports a process called Predictive Evaluation (PE) which enables practitioners to provide executives with compelling training data around the success of training in the three areas of Intention, Adoption, and Impact. PE also works to determine whether success has been achieved, and provides lead indicators of future adoption (transfer of learning) along with recommendations for continuous improvement. PE provides measurement dashboard along with tactics for improving results. Predicting, the core operational concept in this approach, is a "before - the - fact" method which allows key decision makers to select the best training programs to support company strategy and operating plans. Another way to think about this model is: Predicting is before - the - fact to decide if to train. Evaluating is after - the - fact measurement against the predictions. There are four ways that the PE approach differs from other models in the field, namely: 1. Whereas traditional approaches focus on costs and numbers, not on forecasting financial return, PE focuses on the predicted impact and its value - add to the organization. 2. Whereas traditional approaches view evaluation as after - the - fact with no measures of success, PE employs repeated measures that mirror employees' path to improved performance with predicted 'success gates'. 3. Whereas ROI and/or Cost - Benefit evaluations traditionally rely on subjective

estimates, PE provides concrete, business - focused and evidence - based data on return on investment and does not use statistical averages based on subjective estimates of improved performance or productivity. 4. Whereas existing approaches work on an after - the - fact basis with one - off programs, PE offers a determined prediction of the extent of transfer and impact and works well with programs that have repeated deliveries over a period of time. Lacking the information that PE provides, decision makers could fail to support those training programs that have the greatest potential for producing significant value to the company. When decision makers decide to spend large sums of money on training, they seek to evaluate their options as they evaluate other large investments - that is so on the basis on financial returns to the company. This work shows those decision makers how to accurately determine the potential ROI on such training programs before committing to the

The Acquisition of Chinese as a First and Second Language Jan 02 2020 This volume, through highly selective and rigorous review processes, has collected eight empirical studies showcasing research

advances in multiple domains including child first language, adult additional language, and heritage language acquisition. The studies are theoretically motivated and have adopted a spectrum of innovative methodological strategies to achieve a broader understanding of the nature of learning and the learning process. The volume encompasses a wide range of contents: 1) The L1 and L2 acquisition of syntax, semantics, phonetics, and the syntax-discourse interface; 2) Data comparisons across different learner groups: L1 Chinese children, L2 Chinese learners, and Chinese heritage speakers; 3) Acquisition of language skills: speaking, listening, and writing; and last but not least, 4) Instructional interventions including consciousness-raising and metacognitive strategy training. The volume is intended to bridge the gap between research and instruction by helping teachers understand their students and their learning. Informed by research, teachers can opt for appropriate pedagogical approaches and instructional conditions for their students. The volume is guest-edited by Xiaohong Wen, Professor in Applied Linguistics and Chinese language Acquisition at the University of Houston.

Predictive Evaluation Oct 23 2021 At last, an answer to the question that has bedeviled trainers for decades. Predictive evaluation enables you to effectively and accurately forecast training's value to your company, measure against these predictions, establish indicators to track your progress, make midcourse corrections, and report the results in a language that business executives respond to and understand. Dave Basarab explains how to begin by identifying the specific goals and beliefs you want to instill in participants. The next step is to determine exactly what these will look like when put into action. Finally you develop quantifiable measures of how employees' adopting the target beliefs and goals will impact the business. A key strength of this process is that it is profoundly collaborative—supervisors and employees work together to establish standards for success each step

of the way. A how-to guide filled with worksheets, examples, and other tools, Predictive Evaluation ensures that, rather than being regarded as an expense and an act of faith, training will be seen as an investment with a concrete payoff.

Factors Influencing Middle School Students' Sense-making Discussions in Their Small-group

Investigations of Force and Motion May 06 2020 In this study, I adopted a combined individual and sociocultural perspective on learning in order to investigate small-group discussions in an inquiry-based middle school science classroom. The specific purpose of the study was to answer the following research questions: (a) How can we classify students' sense-making statements? (b) To what extent do students engage in sense-making discussion (SMD)? and (c) Which factors provide support for students' SMD? To answer these questions, two groups were videotaped during the Interactions and Motion unit from the Constructing Ideas in Physical Science middle school curriculum. To classify students' sense-making statements, I developed a six-component framework for sense-making discussion. My six components of sense-making discussion are: predicting a phenomenon or experimental outcome; clarifying the facts of a phenomenon or experimental result; describing and explaining a phenomenon or experimental result; defining, describing, clarifying, and connecting scientific concepts, procedures, processes, and representations; testing knowledge compatibility; and making a request for any of the above. The extent of students' sense-making discussions was established by (a) documenting instances of student sense-making according to the six component scheme, and then forming distributions of sense-making instances, and (b) calculating the percentage of time that groups dedicated to sense-making discussion. To determine the influence that various factors have on students' sense-making discussions, I first drew on the research in collaboration, discourse, and nonverbal sense-making to arrive at an initial list of personal, group, task, and contextual factors that would likely influence the SMD in this study. I then picked out significant quantitative differences in sense-making between groups, students, and

different portions of the curriculum (cycles, sub-sections, etc.), and determined to what extent the initial list of factors contributed to the significant differences in SMD, and also to what extent any additional factors contributed to these differences. My analysis showed that many of the factors from the initial list helped to explain the differences in sense-making. I also identified six other factors that contributed to these differences: capacity for intra-group guidance, intellectual capacity, time available for sense-making, external guidance, awareness of the curriculum structure, and an awareness and valuing of the curriculum goals.

Power Maths Year 6 Textbook 6A Aug 28 2019 The whole-class mastery approach that works for every child. Underpinned by the most effective teaching practices, and created by a team of mastery experts led by Series Editor Tony Staneff, Power Maths is designed to make the whole-class mastery teaching approach work for you, your children and your school. The powerful lesson structure of Power Maths comes to life through the high-quality textbooks. They provide a coherent structure through the curriculum and support children on their journey to deeper understanding. The textbooks set out the core learning objectives for the whole class. 'Discover', 'Share' and 'Think Together' sections help promote discussion and ensure mathematical ideas are introduced to children in a logical way to support conceptual understanding. Engaging contexts for problem solving help children to discover patterns and concepts for themselves in a meaningful way. Clear mathematical structures and representations (using the Concrete-Pictorial-Abstract approach) ensure children make connections and grasp concepts. Lovable characters prompt and question children to promote reasoning skills and help to build a growth mindset.
