**STRENGTHENING SECTOR POLICIES FOR BETTER FOOD SECURITY AND NUTRITION RESULTS** May 11 2021

One hundred million people worldwide earn an income from fisheries and aquaculture and many more rely on fish for a nutritious diet. The policy agenda of the sector tends to be oriented towards commercial interests. Often, food security, nutrition and livelihoods concerns are not well factored into fisheries-related policy measures due to the overall lack of knowledge about their linkages, as well as poor coordination across the respective policy domains. This fisheries and aquaculture guidance note highlights the importance of fisheries in local and global food systems and demonstrates how related policy measures can contribute to nutrition and health, particularly for the poor. It also discusses a range of issues to be taken into account when attempting to harmonize fisheries policies with food security and nutrition concerns.

Does Higher Government Spending Buy Better Results in Education and Health Care?

Dec 18 2021 There is little empirical evidence to support the claim that public spending improves education and health indicators. This paper uses cross-sectional data for 50 developing and transition countries to show that expenditure allocations within the two social sectors improve both access to and attainment in schools and reduce mortality rates for infants and children. The size and efficiency of these allocations are important for

promoting equity and furthering second-generation reforms.

**Modern Public Finance** Oct 24 2019 The main problem of public finance is how to improve the way tax money is spent, increase the efficiency of the economy and change the distribution of income in several desirable ways. Contributions by various authors dealing with subjects, such as: The distribution of the tax burden; Public sector dynamics; Public goods and the invisible hand; Federalism and government finance; Tax policy; Integrating allocation and stabilization budgets. In the chapter Public Sector Dynamics is dealt with the public debt and the following questions are treated: Does public debt have any effect? What effects does it have? How is it determined politically? And how is it meant! One of the conclusions is that future government claims and liabilities cannot be valued at their market value.
