Fuzzy Logic Dynamics and Machine Prediction for Failure

Analysis Oct 15 2021 In the fast pace of the modern world it is important, more than ever, for factories to know how and why their machines are failing and what can be done to prevent it. As such, it is imperative that new research is conducted to make sure that factories can operate as efficiently as possible. Fuzzy Logic Dynamics and Machine Prediction for Failure Analysis is an essential reference source for the newest research on the risk assessment matrix, ladder logic, and computerized maintenance management systems (CMMS). Featuring widespread coverage across a variety of related viewpoints and topics, such as the Ishikawa diagram, machinery failure analysis and troubleshooting, model reference adaptive control systems, and proportional-integral-derivative (PID) controllers, this book is ideally designed for professionals, upper-level students, and academics seeking current research on the implementation of fuzzy logic in machine prediction failure.

Glass Packaging Jan 18 2022 At a time when society started to naturally value the circular economy, many people began to rethink the use of glass packaging. This is an interesting return to concepts once lost in the process of popularization of ready-to-drink products. Because it is inert (it does not change the flavor, smell, or color of the packaged product, thus contributing to consumers' health), glass packaging has gained prominence along with the wellness trend. In addition, flint containers also have the benefit of being transparent while the amber ones provide a barrier to light. In the perfumery segment, more than small, the

success of new fragrances depends on the design of the glass bottle. Some say that it is necessary to design the bottle with emotional ingredients, which encourage the consumer to see in the product an object of desire, before trying the fragrance. Glass packaging also delivers glamour and refinement to famous brands of spirits, premium mineral waters, and food. All types of packaging have their functions and applications and, of course, characteristics that differentiate them and make them more suitable for different moments of consumption. Glass packaging has a UNIQUE condition of reducing environmental impact: IT IS RETURNABLE. Glass has been present in packaging since the beginning. It is one of the oldest packaging materials in our history and, from the start, the fact that it is returnable, even before being reusable, makes it environmentally friendly. That is especially true when we can restrict the geographic area of supply. The reverse logistics process must be economically and environmentally sustainable, not to mention the social aspect. This solution democratizes consumption among people with lower available income because products are more competitive and, therefore, consumers can afford them. In addition, the sector continues to invest in the use of recycled content and to conduct studies on reducing the weight of bottles. Better Glass Packaging. Better World!

Advances in Manufacturing II Apr 28 2020 This book covers a variety of topics related to machine manufacturing and concerning machine design, product assembly, technological aspects of production, mechatronics and production maintenance. Based on papers presented at the 6th International Scientific-Technical Conference MANUFACTURING 2019, held in Poznan, Poland on May 19-22, 2019, the different chapters reports on cutting-edge issues in constructing machine parts, mechatronic solutions and modern drives. They include new ideas and technologies for machine cutting and precise processing. Chipless technologies, such as founding, plastic forming, non-metal construction materials and composites, and additive techniques alike, are also analyzed and thoroughly discussed. All in All Free
