World Migration Report 2020 Mar 29 2020 Since 2000, IOM has been producing world migration reports. The World Migration Report 2020, the tenth in the world migration report series, has been produced to contribute to increased understanding of migration throughout the world. This new edition presents key data and information on migration as well as thematic chapters on highly topical migration issues, and is structured to focus on two key contributions for readers: Part I: key information on migration and migrants (including migration-related statistics); and Part II: balanced, evidence-based analysis of complex and emerging migration issues.

The Legend of Polaris Sep 15 2021 "The Legend of Polaris" recounts the remarkable saga of the company that invented the snowmobile. After becoming the number one manufacturer of snowmobiles, Polaris went on to create the first automatic transmission ATV; a line of stable, reliable personal water craft; a sport-boat line; and Victory, the company's celebrated motorcycles.

The Early Years, 4-Stroke Engines Make Their Debut Apr 22 2022 This collection is a resource for studying the history of the evolving technologies that have contributed to snowmobiles becoming cleaner and quieter machines. Papers address design for a snowmobile using E10 gasoline (10% ethanol mixed with pump gasoline). Performance technologies that are presented include: • Engine Design: application of the four-stroke engine • Applications to address both engine and track noise • Exhaust After-treatment to reduce emissions The SAE

International Clean Snowmobile Challenge (CSC) program is an engineering design competition. The program provides undergraduate and graduate students the opportunity to enhance their engineering design and project management skills by reengineering a snowmobile to reduce emissions and noise. The competition includes internal combustion engine categories that address both gasoline and diesel, as well as the zero emissions category in which range and draw bar performance are measured. The goal of the competition is designing a cleaner and quieter snowmobile. The competitors' modified snowmobiles are also expected to be cost-effective and comfortable for the operator to drive.

Hiking Oregon's Eagle Cap Wilderness Jun 12 2021 Lace up your boots and head into Oregon's remote Wallowa Mountains with Hiking Oregon's Eagle Cap Wilderness. Explore this wonderland of more than fifty glacial lakes, miles of streams designated as National Wild and Scenic Rivers, hundreds of soaring peaks, and open meadows with elk, deer, bighorn sheep, coyote, black bear, and cougar. Climb Aneroid, Chief Joseph, and Matterhorn Mountains; hike the Eagle River, Cliff Creek, and Deadman Canyon; or visit Razz, Blue, and Bonny Lakes. Veteran hiker and outdoor writer Fred Barstad will introduce you to these trails and many more. Inside you'll find: up-to-date trail information; maps, photos, and elevation profiles; information on bears and cougars; difficulty, maintenance, and traffic ratings for each hike; access information to the Dihedrals climbing area. Whether you are planning a day hike or an extended backpacking trip, you'll find trails suited to every ability and interest in Oregon's Eagle Cap Wilderness.

From Whirlwind to MITRE Jul 01 2020 The book shows how the wartime alliance of engineers, scientists, and the military exemplified by MIT's Radiation Lab helped to transform research and development practice in the United States through the end of the Cold War period. This book presents an organizational and social history of one of the foundational projects of the computer era: the development of the SAGE (Semi-Automatic Ground Environment) air defense system, from its first test at Bedford, Massachusetts, in 1951, to the installation of the first unit of the New York Air Defense Sector of the SAGE system, in 1958. The idea for SAGE grew out of Project Whirlwind, a wartime computer development effort, when the U.S. Department of Defense realized that the Whirlwind computer might anchor a continent-wide advance warning system. Developed by MIT engineers and scientists for the U.S. Air Force, SAGE monitored North American skies for possible attack by manned aircraft and missiles for twenty-five years. Aside from its strategic importance, SAGE set the foundation for mass data-processing systems and foreshadowed many computer developments of the 1960s. The heart of the system, the AN/FSQ-7, was the first computer to have an internal memory composed of "magnetic cores," thousands of tiny ferrite rings that served as reversible electromagnets. SAGE also introduced computer-driven displays, online terminals, time sharing, high-reliability computation, digital signal processing, digital transmission over telephone lines, digital track-while-scan, digital simulation, computer networking, and duplex computing. The book shows how the wartime alliance of engineers, scientists, and the military exemplified by MIT's Radiation Lab helped to transform research and development practice in the United States through the end of the Cold War period.

Yesterday's Faces Feb 26 2020 The second volume within this series presents more than fifty series characters within pulp fiction, selected to represent four popular story types from the 1907-1939 pulps—scientific detectives, occult and psychic investigators, jungle men, and adventurers in interplanetary romance. Some characters—Tarzan, John Carter of Mars, Craig Kennedy, Anthony (Buck) Rogers—became internationally known. Others are now almost forgotten, except by collectors and specialists.

Backpacking Oregon Aug 02 2020 In Oregon, backpackers can hike wild beaches, enjoy colorful desert canyonlands, walk amid stunning granite peaks, relax in wildflower meadows, and circle glacier-clad mountains. Award-winning guidebook author and longtime Oregon resident Douglas Lorain details 30 spectacular backpacking trips in Backpacking Oregon. Lasting from three

days to two weeks, these carefully crafted itineraries offer geographic diversity, beautiful scenery, and reasonable daily mileage goals. This in-depth guide provides all the information backpackers will need to access the Oregon backcountry, including the Oregon Coast, Columbia Gorge, High Cascades, Hells Canyon, and the Klamath, Siskiyou, Blue, and Wallowa mountains. A detailed trail map and photographs accompany each trip.

Grazing Ecology and Forest History Sep 03 2020 It is a widely held belief that a climax vegetation of closed forest systems covered the lowlands of Central and Western Europe before man intervened in prehistoric times to develop agriculture. If this intervention had not taken place, the forest would still be there, and if left the grassland vegetation and fields now present would revert to a natural closed forest state, although with a reduced number of wild species. This book, which an updated and expanded version of the author's 1997 thesis (presented to the Wageningen University, Netherlands), challenges the traditional view, using examples from history, pollen analyses and studies on the ecology of tree and shrub species such as oak and hazel. It tests the hypothesis that the climax vegetation is a closed canopy forest, against the alternative hypothesis that species composition and vegetational succession were governed by large herbivores, and that the Central and Western European lowlands were covered by a park-like landscape consisting of grasslands, scrub, solitary trees and groves bordered by a mantle and fringe vegetation. Comparative information from the eastern USA is also included throughout the book (this was not present in the thesis), because the forests there are commonly regarded as being analogous to the primeval vegetation in Europe. The book is arranged in 7 chapters: (1) General introduction and formulation of the problem; (2) Succession, the climax forest and the role of large herbivores; (3) Palynology, the forest as climax in prehistoric times and the effects of humans; (4) The use of the wilderness from the Middle Ages up to 1900; (5) Spontaneous succession in forest reserves in the lowlands of Western and Central Europe - including examples from France, Germany, Austria, Slovenia, Sweden, Poland; (6) Establishment of trees and shrubs in relation to light and grazing; and (7) Final synthesis and conclusions. Twelve appendices are included giving further information, and there are 67 pages of references and a subject index.
