[Morphodynamics in Aesthetics](#) Jun 13 2021 This book deals with the complexity of art by focusing on the singularity of the work of art. Gathering a selection of writings in art theory and semiotics, it explores the question of apprehending art from its perceptual aspects to aesthetic comprehension and understanding. Theoretical enquiries focus in particular on the dynamics of the perception of forms, the semiotic value of colour, the aesthetic phenomenon of empathy, the function of vision in relation to other senses and its faculty to lead, in a substantial way, to the embodiment of sense. These theoretical points are constantly observed with reference to the analysis of works of art, especially from the beginning of the modern era, when a renovated psychophysical approach oriented the evolution of contemporary aesthetics. Research into art theories sheds light on how differentials in topologic positions, dimensions, relationships and tones contribute to the arising of forms and colours in perception, and affect the perceiver. The essays presented address in different ways the emergence of sense, by conceiving it as deeply anchored to the dynamics of perception, in addition to the cognitive disposition and knowledge, regardless of whether or not the subject (artist or beholder) is aware of these processes. Through in-depth analyses identifying to what extent the aesthetic moment builds on perceptual and semiotic processes, works of art are revealed to be singularities, reflecting the correlation with morphodynamics in the sciences.

**Pink and Blue** Jul 22 2019 In modern pediatric practice, gender matters. From the pink-and-blue striped receiving blankets used to swaddle newborns, to the development of sex-specific nutrition plans based on societal expectations of the stature of children, a gendered culture permeates pediatrics and children's health throughout the twentieth and early twenty-first centuries. This book provides a look at how gender has served as one of the frameworks for pediatric care in the U.S. since the specialty's inception. Pink and Blue deploys gender—often in concert with class and race—as the central critical lens for understanding the function of pediatrics as a cultural and social project in modern U.S. history.

[Open Sesame](#) Jun 01 2020 There was something wrong! Just as the boiling water was about to be poured on his head and the man with the red book appeared and his life flashed before his eyes, Akram the Terrible, the most feared thief in Baghdad, knew this had happened before. Many times. And he was damned if he was going to let it happen again. Just because he was a character in a story didn't mean that it always had to end this way. Meanwhile, back in Southampton, it's a bit of a shock for Michelle when she puts on her Aunt Fatima's ring and the computer and the telephone start to bitch at her for past misdemeanors. But that's nothing compared to the story that her kitchen appliances have to tell her.

**Why Do I Have to Learn This Stuff?** Dec 07 2020 One of the most common questions asked by high-school students is: 'Why do I have to learn this stuff?' High-school English textbooks answer this question, with regard to what is taught in English class anyway, and the answer is what students have always suspected: There is no good reason to know much of what they are being taught. English textbooks are full of such egregious errors that their publication demonstrates that one needs no more than a superficial knowledge of their subject matter to edit or write for them. If those who are responsible for introducing students to literary studies do not need to know the subject, indifferent adolescents have a right to wonder why they should bother to do their schoolwork. Indeed, if teachers are passing on the information that is being provided by textbook companies, students may be better off ignoring their reading assignments. Excerpt The examination of the lives of Desiderius Erasmus and Thomas More is particularly revealing of the kind of ignorance that a book publisher will accept from its employees. After briefly reviewing his life and interests, the text notes that Erasmus was friends with More and points out that the two friends "had much in common" (199). This is true enough, but having stumbled upon the fact that Erasmus and More had much in common, the text proceeds to explain what they had in common, and error, egregious as well as obvious, raises its ugly head. To determine the commonalities between these two thinkers, the person working on the text must have decided that what was true of Erasmus must also have been true of More. Both thinkers, the person thus concludes, must have been "dedicated churchmen" (199). Erasmus was a churchman: He was a monk. More, by contrast, was a lawyer who became Lord Chancellor of England, something mentioned in the text. He was, in other words, a layman, not a churchman, despite his refusing to acknowledge that Henry VIII was Supreme Head of the Church of England and losing his head for his intransigence. A churchman, as Catholics understand the term, is one who has taken religious vows and become a member of the clergy, as More considered doing before he settled into his career as a lawyer. The word churchman, it is true, began to mean a member of a Church in the late seventeenth century, but when it is used in this sense, the word is only applied to the members of Anglican state churches throughout the world, that is, The Church of England, The Church of Ireland, and so on (OED). Neither Erasmus nor More were churchman in this sense, both being Catholics, and anyone in possession of a decent dictionary could have found that out. Catalogue Information

**The Diabetes Textbook** Nov 18 2021 Diabetes has become a worldwide health problem, the global estimated prevalence approaches ten percent and the burden of this disease in terms of morbidity and mortality is unprecedented. The advances acquired through the knowledge of the mechanisms of the disease and the variety of therapeutic approaches contrast with the inability of private and public health systems in underdeveloped and even developed countries to achieve the goals of treatment. This paradox has been described in many sources: the surge of scientific advances contrast with an unprecedented amount of human suffering. Thus, a patient centered and an evidence based approach with the capacity to produce measurable clinical and economic outcomes is required. The purpose of this textbook is multiple: to offer a comprehensive resource covering all aspects of outpatient management; to address diabetes as a health problem from an epidemiological, economic and clinical perspective; to discuss the role of social determinants of health on the worldwide increase in diabetes; to highlight the challenges and obstacles in providing adequate care; and to outline a multidisciplinary approach to management in which medical visits retain their importance as part of a team comprising the patient, his or her family and a multidisciplinary group of health professionals who are able to move beyond the traditional approach of diabetes as a disease and greatly improve outcomes.

*The Art and Craft of Play Directing* Aug 23 2019 Theatre is an interpretive art based upon a director's emotional reaction to reading a play and imagining a production of that play. Before the audience experiences the production, the director must go through a process, part art and part craft, to create it. This book is intended to introduce undergraduate students with a solid theatre background to that process. Stevens includes chapters covering theatre and art, the interpretation of the script, composition and movement, working with actors, and matters of style. Each chapter contains exercises in order for students to consolidate what they have learned. The complete text of John Millington Synge's "Riders to the Sea" is included as an example and study text, and Stevens relates many examples from his own rich directing background. Twenty production photos, two sample floor plans, and numerous diagrams round out the text. The study of directing is a life-long project, and in this book Stevens provides a basis for that study.

**Applied Multivariate Statistics for the Social Sciences, Fifth Edition** Apr 30 2020 This best-selling text is written for those who use, rather than develop statistical methods. Dr. Stevens focuses on a conceptual understanding of the material rather than on proving results. Helpful narrative and numerous examples enhance understanding and a chapter on matrix algebra serves as a review. Annotated printouts from SPSS and SAS indicate what the numbers mean and encourage interpretation of the results. In addition to demonstrating how to use these packages, the author stresses the importance of checking the data, assessing the assumptions, and ensuring adequate sample size by providing guidelines so that the results can be generalized. The book is noted for its extensive applied coverage of MANOVA, its emphasis on statistical power, and numerous exercises including answers to half. The new edition features: New chapters on Hierarchical Linear Modeling (Ch. 15) and Structural Equation Modeling (Ch. 16) New exercises that feature recent journal articles to demonstrate the actual use of multiple regression (Ch. 3), MANOVA (Ch. 5), and repeated measures (Ch. 13) A new appendix on the analysis of correlated observations (Ch. 6) Expanded discussions on obtaining non-orthogonal contrasts in repeated measures designs with SPSS and how to make the identification of cell ID easier in log linear analysis in 4 or 5 way designs Updated versions of SPSS (15.0) and SAS (8.0) are used throughout the text and introduced in chapter 1 A book website with data sets and more. Ideal for courses on multivariate statistics found in psychology, education, sociology, and business departments, the book also appeals to practicing researchers with little or no training in multivariate methods. Prerequisites include a course on factorial ANOVA and covariance. Working knowledge of matrix algebra is not assumed.
