A bonus chapter addresses how to survive medical school's rigorous education requirements and the most efficient ways to maximize education while still enjoying life. Based on personal experience, Adesina and Taha help medical students discover the secrets, learn the rules, and avoid common costly mistakes when preparing for and taking important national medical board examinations. How to Study Effectively Dec 27 2019 HOW TO STUDY EFFECTIVELY By Guy Montrose Whipple Excerpt from Introduction Not long ago I was asked by a group of high-school students to present to them some suggestions on the technique of studying, with the idea that better knowledge of the methods by which school work could be prepared might increase their efficiency as students. A survey of the available literature seemed to warrant the conclusion that, despite the existence of a number of books upon the art of study, there was still room for another treatment that should be limited to the direct laying down of a series of rules or maxims, with just sufficient explanatory comment to make them readily intelligible and serviceable for the needs of the average high-school or college student. I judge that many students in our high schools and colleges are not now working under the best possible conditions, and that they would be glad to increase their efficiency, if only they knew how to do it. The rules which follow are intended to help these students. Most of the suggestions could also be profitably kept in mind by elementary-school teachers, whose business it should be as early as possible to develop right habits of study in their pupils. While it is true that much of what is presented in the school is calculated to appeal directly to the native interests of students, to elicit their curiosity, and to challenge their attention, it is equally true that most studying is real work, and that most boys and girls have to acquire the art of studying as they have to acquire many other habits and skills necessary to success in life. Moreover, conditions in many elementary schools are unfortunately such as to promote only the most superficial kind of studying, to put a premium upon the mere committing to memory of words, to permit fickle and ill-

sustained attention and the avoidance of hard intellectual work. Students in both high school and college have been studying, it is true, for years, but too often they have not been studying efficiently, have not formed right habits of mental work, and indeed, do not even know how to go about the development of an adequate method or plan for such work. They are often unable to recognize as such the problems set before them, nor do they have clear ideas as to the methods by which problems should be solved. Neither do they know fully how to deal with those 'lessons' that must be 'learned' more or less verbatim. For by 'studying' I mean to include the 'getting of lessons,' like learning a list of words in spelling, as well as studying in the sense of solving problems and making an investigatory examination and critical survey of a topic. . .

Windham Press is committed to bringing the lost cultural heritage of ages past into the 21st century through high-quality reproductions of original, classic printed works at affordable prices. This book has been carefully crafted to utilize the original images of antique books rather than error-prone OCR text. This also preserves the work of the original typesetters of these classics, unknown craftsmen who laid out the text, often by hand, of each and every page you will read. Their subtle art involving judgment and interaction with the text is in many ways superior and more human than the mechanical methods utilized today, and gave each book a unique, hand-crafted feel in its text that connected the reader organically to the art of bindery and book-making. We think these benefits are worth the occasional imperfection resulting from the age of these books at the time of scanning, and their vintage feel provides a connection to the past that goes beyond the mere words of the text.

Doing Your Child Observation Case Study Aug 03 2020 Observation of young children, their development, and planning for next steps is a fundamental requirement of early years practice. Awareness of appropriate techniques, understanding what you are observing, as well as what it all means in terms of planning for learning is an essential yet difficult skill to acquire. This is a very practical book on observing young children that supports you in preparing a child observation case study. Taking a step-by-step approach the book covers the whole process beginning with choosing a child to study before discussing the fundamentals of child observation. It includes invaluable guidance on: The ethics of your study Appropriate techniques and tools for gathering data Observations that are useful How to select material to include Analyzing or interpreting the information Potential pitfalls The book includes many examples of good observations, which help show how your own observations can be evaluated, analyzed and used. In addition there is a fully worked example of a child observation case study in the penultimate chapter. If you are studying early years or early childhood studies at foundation, undergraduate or Master's degree level then this book will really help you get to grips with how a good child observation study unfolds and develops. Cath Arnold works at the Pen Green Centre, an internationally renowned Children's Centre in Corby, UK. She is author of *Observing Harry* (Open University Press 2003). This is a fascinating and accessible new book on child observation case study for

students and professionals. Cath Arnold integrates theoretical perspectives and practical examples of observations with remarkable clarity in this comprehensive guidance to child case study. Shirley Allen, Senior Lecturer Early Childhood Studies, Middlesex University It is quickly evident to the reader that 'Doing Your Child Observation Case Study' is steeped in the expertise and extensive experience of its author. The practical guidance it offers is likely to prove invaluable for childhood studies students and early career researchers in the field. Yet Cath Arnold's 'step-by-step guide' goes far beyond the practical. She shines vital light on the complex nuances of values, beliefs, ethics and rights inherent in child case study and addresses with clarity and credibility the crucial role that theory can play in supporting our understanding of children's actions. This text is an excellent addition to the childhood studies bookshelf. Dr Jane Murray, Centre for Education and Research, University of Northampton, UK Cath Arnold has provided a rich resource for those who want to understand more about children, their wellbeing and their learning. This detailed approach to child observation offers guidance on why, how and what to observe, and how to interpret what is observed. Rich in examples collected over many years 'Doing your Child Observation Case Study' will get many early years practitioners started on their own learning journeys as they watch and engage with young children to develop detailed impressions of children's development. Professor Cathy Nutbrown, Head of The School of Education, The University of Sheffield In this new book Cath is once more supporting early childhood educators to engage in the strong UK tradition of child observations; the tradition of Piaget, Novara, Darwin and Susan Isaacs. She has developed her own understanding of the importance of observational studies building on the giants whose shoulders we all stand on. This powerful publication combines insights into both the theory and practice of developing child observations in an early years setting. Cath demonstrates how detailed and powerful records of children's learning and development speak to practitioners and hold their value over time in a world where early educators are increasingly obliged to devote enormous amounts of their energy filling in forms, schedules and are hard pressed to reject the pressure of tick box developmental checks and imposed tracking schemes. This book lights the way to a much deeper way of documenting children's learning and development. As educators we need to match children's learning with rich curriculum content and this book reminds us that we can only achieve this critical pedagogical task if we have closely watched what it is that excites and interests each individual child. 'Doing Your Child Observation Case Study' shows us the way to be well informed practitioners able to offer children a really rich learning experience. Dr. Margy Whalley, Director of the Research, Development and Training Base at the Pen Green Centre and Centre for Children and their Families

Lesson Study for Learning Community Oct 17 2021 Lesson Study has been actively introduced from Japan to various parts of the world, starting with the US. Such introduction is heavily connected with a focus on mathematics education and there is a strong misconception that Lesson Study is only for mathematics or science. The introduction is usually done at the departmental or form level and there has been a strong question about its sustainability in schools. This book comprehensively explores the idea of Lesson Study for Learning Community (LSLC) and suggests that reform for the culture of the school is needed in order to change learning levels among the children, teachers and even parents. In order for this to happen, the ways of management and leadership are also included as objectives of LSLC, as are practices at the classroom level. It argues that LSLC is a comprehensive vision and framework of school reform and needs to be taken up in a holistic way across disciplines. Chapters include: How to Create Time How to Build the Team How to Promote Reform How to Reform Daily Lessons How to Conduct a Research Lesson How to Discuss Observed Lessons How to Sustain School Reform based on LSLC Strong interest in LSLC is already prevalent in Asian countries, such as Japan, China, Korea, Taiwan, Indonesia, Vietnam and Singapore and is now being introduced more in the west. This book will be of great interest to those involved in education policy and reform, and for practitioners of education at all levels.

What About Law? Jun 20 2019 “What About Law?’ succeeds where so many legal guidebooks fail ... [it] skilfully demystifies the law and ably proves its argument. The law is, indeed, all around us - and this book will whet your appetite to find out how and why.” – Alex Wade, *The Times* (of the previous edition) Law is one of the few subjects that the school leaver, choosing a degree course, will have very little real understanding of. This book comes to the rescue by clearly setting out what a prospective law student can expect and why a student should choose to study law. This new edition is updated to reflect the reality of studying law today, highlighting changes due to Brexit and reforms to constitutional law. The book covers the compulsory subjects every law student has to study: contract, criminal, property and trusts law, and brings them up to date. With a clear core structure and approach it takes a case from each of these subjects to illustrate legal issues and methodology. The writing style is accessible and has the audience – novices to law – firmly in mind. *What About Law?* shows how the study of law can be fun, intellectually stimulating and challenging. It introduces prospective students to the legal system, legal reasoning, critical thinking and argument. Written by a team of experienced teachers, this book should be read by every student about to embark on the study of law.
