Radioguided Surgery Oct 28 2019 This book offers a comprehensive overview of the state of the art in the practice of radioguided surgery. The opening section is devoted to the basic physics principles for detection and imaging, radiation detection device technology, principles of surgical navigation, radionuclides and radiopharmaceuticals, and radiation safety. A series of chapters then address the clinical application of radioguided surgery for a variety of malignancies, including breast cancer, melanoma and other cutaneous malignancies, gynecologic malignancies, head and neck malignancies, thyroid cancer, urologic malignancies, colon cancer, gastroesophageal cancer, lung cancer, bone tumors, parathyroid adenomas, and neuroendocrine tumors. For each application, the recommended methodological approaches are discussed and the available cumulative clinical experiences of investigators from across the globe are reviewed. A conscious effort is made to highlight recent developments and innovative multidisciplinary approaches within each clinical area. Interesting issues and novel approaches are further explored through a collection of selected case reports at the end of the book. The contributing authors are all experts in their own fields, ensuring that the book will hold wide appeal for surgeons, surgical technologists, nuclear medicine physicians, nuclear medicine technologists, and various trainees.

Nucleus and Nation Oct 01 2022 In 1974 India joined the elite roster of nuclear world powers when it exploded its first nuclear bomb. But the technological progress that facilitated that feat was set in motion many decades before, as India sought both independence from the British and respect from the larger world. Over the course of the twentieth century, India metamorphosed from a marginal place to a serious hub of technological and scientific innovation. It is this tale of transformation that Robert S. Anderson recounts in *Nucleus and Nation*. Tracing the long institutional and individual preparations for India's first nuclear test and its consequences, Anderson begins with the careers of India's renowned scientists—Meghnad Saha, Shanti Bhatnagar, Homi Bhabha, and their patron Jawaharlal Nehru—in the first half of the twentieth century before focusing on the evolution of the large and complex scientific community—especially Vikram Sarabhi—in the later part of the era. By contextualizing Indian debates over nuclear power within the larger conversation about modernization and industrialization, Anderson hones in on the thorny issue of the integration of science into the framework and self-reliant ideals of Indian nationalism. In this way, *Nucleus and Nation* is more than a history of nuclear science and engineering and the Indian Atomic Energy Commission; it is a unique perspective on the history of Indian nationhood and the politics of its scientific community.

New Therapies in Advanced Cutaneous Malignancies Aug 31 2022 This book provides a detailed overview of the activity and efficacy of new treatments and promising perspectives in the field of cutaneous malignancies. The first part of the book covers the basic molecular and immunological mechanisms. It then goes on to cover specific strategies in melanoma and non-melanoma skin cancers that, starting from the basic mechanisms, translate this information into clinical routine or translational research. This unique handbook comprises very practical structured descriptions of more than 10 new agents used in treatment of melanomas and skin carcinomas together with biological background of their mechanisms of action. It provides structured and up-to-date information about all therapeutics in cutaneous malignancies, making it extremely useful in clinical practice, for clinicians that need timely and focused information. Prepared by a group of international authors from expert melanoma centres in Europe, the book provides knowledge distilled from the diverse perspectives of the contributing authors (pathologists, translational scientists and clinicians). This book is of interest to medical oncologists, oncological surgeons, dermatologists and immunologists as well as biologists and pharmacologists.

World crops: Cool season food legumes Jun 16 2021 The genesis of the International Food Legume Research Conference (IFLRC) can be traced back to 1983 - and so this Volume, the Proceedings of that Conference, has had a gestation period of close to five years. Professor Norman Simmonds, the perennial Book Review Editor of *Experimental Agriculture*, has expressed the opinion (vol. 22, p. 201, 1986) that "Many symposial volumes are just plain awful!" Elsewhere (Nature vol. 312, pp. 201-2, 1984), Anthony Watkinson - then a Commissioning Editor at Oxford University Press has described several reasons which have led him to believe that "Conference proceedings - symposia - are generally disliked To put it mildly, this type of publication has a bad name". The problems, from an author's perspective, of contributing to any many-authored publication are aired in an exchange of correspondence in *Biologist* (vol. 30, pp. 123 and 180, 1983; and vol. 31, pp. 3 and 69, 1984). And from the editor's viewpoint, D. J. Weatherall - then Nuffield Professor of Clinical Medicine at the University of Oxford - has described (Nature vol. 317, p.

Science, Technology and Medicine in Colonial India May 04 2020 Interest in the science, technology and medicine of India under British rule has grown in recent years and has played an ever-increasing part in the reinterpretation of modern South Asian history. Spanning the period from the establishment of East India Company rule through to Independence, David Arnold's wide-ranging and analytical survey demonstrates the importance of examining the role of science, technology and medicine in conjunction with the development of the British engagement in India and in the formation of Indian responses to western intervention. One of the first works to analyse the colonial era as a whole from the perspective of science, the book investigates the relationship between Indian and western science, the nature of science, technology and medicine under the Company, the creation of state-scientific services, 'imperial science' and the rise of an Indian scientific community, the impact of scientific and medical research and the dilemmas of nationalist science.

Critical Care Nursing - E-Book Sep 27 2019 Winner of the 2nd-place American Journal of Nursing Book of the Year award in emergency/critical care nursing for 2021! Prepare for success in today's high acuity, progressive, and critical care settings! **Critical Care Nursing: Diagnosis and Management, 9th Edition** helps you understand and apply critical care nursing principles and concepts to clinical assessment, diagnostic procedures, and therapeutic management. Known for its comprehensive coverage, this leading textbook uses a logical, body systems organization to address the care of patients with physiological alterations. New to this edition are illustrated Patient-Centered Critical Care features aimed at "humanizing the ICU" as well as Next Generation NCLEX® Exam-style case studies to help you further develop your clinical judgment skills and prepare for the latest nursing licensure exam. Also ideal for CCRN® and PCCN® exam preparation, this book is a one-stop resource on the concepts and skills required for critical care nursing! Time-tested, high-quality content addresses all aspects of today's high acuity, progressive, and critical care nursing. Consistent organization within each body-system unit provides an efficient framework for learning, for CCRN® and PCCN® certification preparation, and for reference in clinical practice. Comprehensive, evidence-based content is highly referenced and includes internet resources for further research and study. Enhanced Quality and Safety Education for Nurses (QSEN) integration links text content to QSEN competencies, through the addition of QSEN-related questions in case studies, QSEN-labeled features and boxes, QSEN content icons, and highlighted QSEN information.

DeVita, Hellman, and Rosenberg's Cancer Nov 09 2020 The standard-setting text in oncology for 40 years, DeVita, Hellman and Rosenberg's **Cancer: Principles and Practice of Oncology, 12th Edition**, provides authoritative guidance and strategies for managing every type of cancer by stage and presentation. Drs. Vincent T. DeVita, Jr., Theodore S. Lawrence, and Steven A. Rosenberg oversee an outstanding team of expert contributing authors who keep you up to date and fully informed in this fast-changing field. This award-winning reference is also continually updated on Health Library and VitalSource platforms for the life of the edition.

Neonatal Nutrition for Inflammatory Disorders and Necrotizing Enterocolitis Aug 19 2021 This Nutrients Special Issue focuses on neonatal nutritional advances for inflammatory disorders affecting infants such as necrotizing enterocolitis (NEC). Nutrition can significantly impact the development of certain diseases that afflict infants. This Special Issue aims to bring together the latest research on the role of nutrition in preventing or impacting neonatal disorders. Specifically, this Special Issue focuses on the role of breast milk or donor breast milk and the various components in milk that have been demonstrated to protect against NEC and other inflammatory diseases. This issue provides a comprehensive composite of the advances in nutritional strategies that can modulate or prevent neonatal intestinal disorders.

Chromosome Woman, Nomad Scientist Dec 31 2019 This is the first in-depth and analytical biography of an Asian woman scientist—Edavalesh Kakkat Janaki Ammal (1897-1984). Using a wide range of archival sources, it presents a dazzling portrait of the twentieth century through the eyes of a pioneering Indian woman scientist, who was highly mobile, and a life that intersected with several significant historical events—the rise of Nazi Germany and World War II, the struggle for Indian Independence, the social relations of science movement, the Lysenko affair, the green revolution, the dawn of environmentalism and the protest movement against a proposed hydro-electric project in the Silent Valley in the 1970s and 1980s. The volume brings into focus her work on mapping the origin and evolution of cultivated plants across space and time, to contribute to a grand history of human evolution, her works published in peer-reviewed Indian and international journals of science, as well as her co-authored work, **Chromosome Atlas of Cultivated Plants (1945)**, considered a bible by practitioners of the discipline. It also looks at her correspondence with major personalities of the time, including political leaders like Jawaharlal Nehru, biologists like Cyril D. Darlington, J. B. S. Haldane and H. H. Bartlett, geographers like Carl Sauer and social activists like Hilda Seligman, who all played significant roles in shaping her world view and her science. A story spanning over North America, Europe and Asia, this biography is a must-have for scholars and researchers of science and technology studies, gender studies, especially those studying women in the sciences, history and South Asian studies. It will also be a delight for the general reader.

Margaret and Charley Oct 21 2021 More than just the story of Charles Best's discovery of insulin, this is the tale of an extraordinary couple, told through diaries, scrapbooks, and photographs.

Press in India Jan 30 2020 Reports for 1958-1970 include catalogues of newspapers published in each state and Union Territory.

Admissions to Peterhouse Nov 02 2022 Originally published in 1939, this book presents a register of admissions to Peterhouse College, Cambridge during the period October 1911 to December 1930. The text consists of abstracts from the College Historical Registers, supplemented by information from other sources. A detailed introduction is also provided, together with information on Masters and Fellows elected to the College during the period October 1911 to December 1938. This book will be of value to anyone with an interest in the history of Peterhouse and Cambridge University.

Neuroendocrine Neoplasia Management Jan 24 2022 This book provides the most recent update on the management of neuroendocrine neoplasia (NEN), a term covering all tumors of various organs and/or with a particular histology, including MEN (multiple endocrine neoplasia) related tumors, MINEN (mixed neuroendocrine-non-neuroendocrine neoplasms), NEC (neuroendocrine carcinoma) and Merkel's carcinoma. NENs are heterogeneous in their biology, clinical presentation and prognosis, showing a great variability in aggressiveness and therapy response. As a result, their treatment is based on a large spectrum of options. The standard therapies are surgery in early disease, various loco-regional procedures in certain conditions and mostly of a palliative nature in metastatic disease. At present, thanks to our increased understanding of molecular signaling pathways, several pharmacological approaches can be used in patients with advanced NENs. Somatostatin analogs display both anti-tumor effects and symptom control. Novel peptide-radio-receptor treatment (PRRT) is used in patients with well differentiated tumors. The agents targeting angiogenesis and/or PI3K/AKT/mTOR pathway, alone or in combination with analogues, have provided encouraging results in advanced disease. The first part of the book focuses on the history, epidemiology and the most relevant scientific achievements, covering the discoveries in genetic and molecular biology, the endoscopic techniques with guided biopsy, and the metabolic imaging with hybrid PET/CT and MRI/CT. It particularly highlights the emerging strategies in therapy, surgery and mini-invasive surgery as well as loco-regional and systemic treatments, including targeted therapy and/or biological therapies. The second part then explores the management of NENs of various anatomical origins and/or with peculiar biology. It describes the range of the current options and the most relevant results from the clinical trials. This informative book provides valuable insights for all those interested in the management of neuroendocrine neoplasia.

Myofibrillogenesis Oct 09 2020 Myofibrillogenesis has been studied extensively over the last 100 years. Until recently, we have not had a comprehensive understanding of this fundamental process. The emergence of new technologies in molecular and cellular biology, combined with classical embryology, have started to unravel some of the complexities of myofibril assembly in striated muscles. In striated muscles, the contractile proteins are arranged in a highly ordered three dimensional lattice known as the sarcomere. The assembly of a myofibril involves the precise ordering of several proteins into a linear array of sarcomeres. Multiple isoforms in many of these proteins further complicate the process, making it difficult to define the precise role of each component. This volume has been compiled as a comprehensive reference on myofibrillogenesis. In addition, the book includes reviews on myofibrillar disarray under various pathological conditions, such as familial hypertrophic cardiomyopathy (FHC), and incorporates a section on the conduction system in the heart. Much of the information in this volume has not been described elsewhere. Presented in a manner to be of value to students and teachers alike, "Myofibrillogenesis" will be an invaluable reference source for all in the fields of muscle biology and heart development.
