Strategies for Quasi-Monte Carlo Nov 22 2021 Strategies for Quasi-Monte Carlo builds a framework to design and analyze strategies for randomized quasi-Monte Carlo (RQMC). One key to efficient simulation using RQMC is to structure problems to reveal a small set of important variables, their number being the effective dimension, while the other variables collectively are relatively insignificant. Another is smoothing. The book provides many illustrations of both keys, in particular for problems involving Poisson processes or Gaussian processes. RQMC beats grids by a huge margin. With low effective dimension, RQMC is an order-of-magnitude more efficient than standard Monte Carlo. With, in addition, certain smoothness - perhaps induced - RQMC is an order-of-magnitude more efficient than deterministic QMC. Unlike the latter, RQMC permits error estimation via the central limit theorem. For random-dimensional problems, such as occur with discrete-event simulation, RQMC gets judiciously combined with standard Monte Carlo to keep memory requirements bounded. This monograph has been designed to appeal to a diverse audience, including those with applications in queueing, operations research, computational finance, mathematical programming, partial differential equations (both deterministic and stochastic), and particle transport, as well as to probabilists and statisticians wanting to know how to apply effectively a powerful tool, and to those interested in numerical integration or optimization in their own right. It recognizes that the heart of practical application is algorithms, so pseudocodes appear throughout the book. While not primarily a textbook, it is suitable as a supplementary text for certain graduate courses. As a reference, it belongs on the shelf of everyone with a serious

interest in improving simulation efficiency. Moreover, it will be a valuable reference to all those individuals interested in improving simulation efficiency with more than incremental increases. Hillier's Fundamentals of Motor Vehicle Technology Oct 29 2019 Completely revised and updated, Hillier's famous text is now available as three separate volumes. Book 2 concentrates on Powertrain management systems: Engine management (petrol and diesel) and transmission management (manual and automatic). All the associated fundamental information on sensors actuators and electronic control systems is included, as well as more advanced material. The information builds up from basic control systems to those linked by multiplexing.

Financial Markets and Corporate Strategy European Edition 2e Apr 27 2022 The second European edition of Financial Markets and Corporate Strategy provides comprehensive coverage of financial markets and corporate finance, brought to life by real world examples, cases and insights. Placed in a truly international context, this new and updated edition takes an academic and practical view-point to guide students through the challenges of studying and practicing finance. Aimed specifically at an international audience, this edition boasts hundreds of references to new and relevant non-US research papers from top finance journals. Whilst retaining the well respected structure of the successful US text, Professor David Hillier has also made a number of additions which include: Fully updated research, data and examples in every chapter. Coverage of the global financial crisis, the impact it made on the financial markets and the lessons being learnt by the finance industry. A stronger emphasis on corporate governance and agency theory. Updates on accounting standards, bankruptcy laws, tax rules and tax systems.

Financial Accounting, Reporting, and Analysis Jan 01 2020 Offering both technical and interpretative content, this is the only truly balanced financial accounting textbook to provide students not only with the 'how' and 'why' of financial information, but also guidance on what this means in practice.

Origin and Mineralogy of Clays Dec 12 2020 Origin and Mineralogy of Clays, the first of two volumes, lays the groundwork for a thorough study of clays in the environment. The second volume will deal with environmental interaction. Going from soils to sediments to diagenesis and hydrothermal alteration, the book covers the whole spectrum of clays. The chapters on surface environments are of great relevance in regard to environmental problems in soils, rivers and lake-ocean situations, showing the greatest interaction between living species and the chemicals in their habitat. The book is of interest to scientists and students working on environmental issues.

Space Is the Machine May 05 2020 Since The Social Logic of Space was published in 1984 Bill Hillier and his colleagues at University College London have been conducting research on how space features in the form and functioning of buildings and cities. A key outcome is the concept of 'spatial configuration' - meaning relations which take account of other relations in a complex. New techniques have been developed and applied to a wide range of architectural and urban problems. The aim of this book is to assemble some of this work and show how it leads the way to a new type of theory of architecture: an 'analytic' theory in which understanding and design advance together. The success of configurational ideas in bringing to light the spatial logic of buildings and cities suggests that it might be possible to extend these ideas to other areas of the human sciences where problems of configuration and pattern are critical.

Financial Markets and Corporate Strategy Solutions Manual Sep 28 2019 Contents of this exercise book - 'Raising capital in financial markets'; 'Debt financing'; 'Equity financing'; 'the mathematics and statistics of portfolios'; 'Mean-variance analysis and the capital asset pricing model'; 'Factor models and the arbitrage pricing theory'; 'Pricing derivatives'; 'Options'; 'Discounting and valuation'; 'Investing in risk-free projects'; 'Investing in risky projects'; 'Allocating capital and corporate strategy', 'Corporate taxes and the impact of financing on real asset valuation'; 'How taxes affect dividends and share repurchases'; 'Bankruptcy costs and debt holder-equity holder conflicts'; 'Capital structure and corporate strategy'; 'How managerial incentives affect financial decisions'; 'The information conveyed by financial decisions'; 'Mergers and acquisitions'; 'Risk management and corporate strategy'; 'The practice of hedging'; 'Interest rate risk management'.

Models, Methods, Concepts & Applications of the Analytic Hierarchy Process Jun 17 2021

The Analytic Hierarchy Process (AHP) is a prominent and powerful tool for making decisions in situations involving multiple objectives. Models, Methods, Concepts and Applications of the Analytic Hierarchy Process, 2nd Edition applies the AHP in order to solve problems focused on the following three themes: economics, the social sciences, and the linking of measurement with human values. For economists, the AHP offers a substantially different approach to dealing with economic problems through ratio scales. Psychologists and political scientists can use the methodology to quantify and derive measurements for intangibles. Meanwhile researchers in the physical and engineering sciences can apply the AHP methods to help resolve the conflicts between hard measurement data and human values. Throughout the book, each of these topics is explored utilizing real life models and examples, relevant to problems in today's society. This new edition has been updated and includes five new chapters that includes discussions of the following: - The eigenvector and why it is necessary - A summary of ongoing research in the Middle East that brings together Israeli and Palestinian scholars to develop concessions from both parties - A look at the Medicare Crisis and how AHP can be used to understand the problems and help develop ideas to solve them.

Muhammad Iqbal Mar 15 2021 Bringing together a diverse number of prominent and emerging scholars, from backgrounds in political science, philosophy and religious studies, this book offers novel examinations of the philosophical ideas that laid at the heart of Iqbal's own.

Fundamentals of Corporate Finance Nov 03 2022 Prepared by Matthew Will of the University of Indianapolis, the Study Guide contains a thorough list of activities for the student, including an introduction to the chapter, sources of business information, key concepts and terms, sample problems with solutions, integrated PowerPoint slides, and related web links.

European Security in NATO's Shadow Aug 20 2021 This book asks why European countries tried to build a security institution outside of NATO, emphasising the influence of political party ideologies.

Quiet Activism Nov 30 2019 This book focuses on the potential and possibilities for socially innovative responses to the climate emergency at the local scale. Climate change has intensified the need for communities to find creative and meaningful ways to address the sustainability of their environments. The authors focus on the creative and collaborative ways local- scale climate action reflects the extra-ordinary measures taken by ordinary people. This includes critical engagement with the ways in which novel social practices and partnerships

emerge between people, organisations, institutions, governance arrangements and eco-systems. The book successfully highlights the transformative power of socially innovative activities and initiatives in response to the climate crisis; and critically explores how different individuals and groups undertake climate action as 'quiet activism' – the embodied acts of collective disruption, subversion, creativity and care at the local scale.

Lectures on Corporate Finance Oct 22 2021 This course of lectures introduces students to elementary concepts of corporate finance using a more systematic approach than is generally found in other textbooks. Axioms are first highlighted and the implications of these important concepts are studied afterwards. These implications are used to answer questions about corporate finance, including issues related to derivatives pricing, state-price probabilities, dynamic hedging, dividends, capital structure decisions, and risk and incentive management. Numerical examples are provided, and the mathematics is kept simple throughout. In this second edition, explanations have been improved, based on the authors' experience teaching the material, especially concerning the scope of state-price probabilities in Chapter 12. There is also a new Chapter 22: Fourteen Insights.

Shrinkwrap Sep 20 2021 *Fundamentals of Corporate Finance*, 1st European Edition, brings to life the modern-day core principles of corporate finance using a problem solving approach. The book is an adaptation of the highly successful *Fundamentals of Corporate Finance* text by Ross, Westerfield and Jordan and is aimed specifically at an international audience.

4th Party Cyber Logistics for Air Cargo Feb 11 2021 *4th Party Cyber Logistics For Air Cargo* is a technical discussion for researchers and practitioners to understand the issues, models, and future directions of air cargo logistics in the cyber era. This book introduces the many aspects of planning and control of air cargo logistics processes in an e-Business environment. The authors approach this subject matter from the perspective of the logistics service providers. There is tremendous potential of achieving industry-wide collaboration between agents of the air cargo industry via an e-Business community platform. At the same time, there are many intellectually challenging problems regarding the architecture, ownership, decision support environment, and knowledge management of such an e-Business platform. The authors provide an evolutionary view to conceptualize the developments of websites where e-Commerce activities and e-Business activities co-exist. Four Web eras are detailed, providing an impetus for the development of frameworks of an e-Business platform for air cargo logistics, or e-Platform. The conceptual framework captures the new elements in cyber logistics and what the framework can do for the industry.

Morality in Cormac McCarthy's Fiction Jul 27 2019 This book argues that McCarthy's works convey a profound moral vision, and use intertextuality, moral philosophy, and questions of genre to advance that vision. It focuses upon the ways in which McCarthy's fiction is in ceaseless conversation with literary and philosophical tradition, examining McCarthy's investment in influential thinkers from Marcus Aurelius to Hannah Arendt, and poets, playwrights, and novelists from Dante and Shakespeare to Fyodor Dostoevsky and Antonio Machado. The book shows how McCarthy's fiction grapples with abiding moral and metaphysical issues: the nature and problem of evil; the idea of God or the transcendent; the credibility of heroism in the modern age; the question of moral choice and action; the possibility of faith, hope, love, and goodness; the meaning and limits of civilization; and the definition of what it is to be human. This study will appeal alike to readers, teachers, and scholars of Cormac McCarthy.

Complexity Theories of Cities Have Come of Age Mar 03 2020 Today, our cities are an embodiment of the complex, historical evolution of knowledge, desires and technology. Our planned and designed activities co-evolve with our aspirations, mediated by the existing technologies and social structures. The city represents the accretion and accumulation of successive layers of collective activity, structuring and being structured by other, increasingly distant cities, reaching now right around the globe. This historical and structural development cannot therefore be understood or captured by any set of fixed quantitative relations. Structural changes imply that the patterns of growth, and their underlying reasons change over time, and therefore that any attempt to control the morphology of cities and their patterns of flow by means of planning and design, must be dynamical, based on the mechanisms that drive the changes occurring at a given moment. This carefully edited post-proceedings volume gathers a snapshot view by leading researchers in field, of current complexity theories of cities. In it, the achievements, criticisms and potentials yet to be realized are reviewed and the implications to planning and urban design are assessed.

Solutions Manual to Accompany Corporate Finance Aug 27 2019 The Solutions Manual contains detailed, worked-out solutions for all of the problems in the end of chapter material. It has also been revised for accuracy by multiple sources. It is also available for purchase by students. The Solutions Manual is prepared by Joseph Smolira, Belmont University

One Hundred Film Noirs Jul 07 2020 Film noir's popularity with cinema audiences, enthusiasts and scholars has remained unabated since post-war French critics began discerning a new trend in American film with the release of such stylish and atmospheric crime features as *Double Indemnity* and *Murder, My Sweet*. Many of Hollywood's greatest directors such as Fritz Lang and Robert Siodmak are now closely associated with film noir's psychologically acute observations of the darker contours of the American urban landscape. Thanks to evocative cinematography, sharp writing and powerful performances, these films have had an enduring influence on international visual culture. *100 Film Noirs* provides an authoritative overview of film noir past and present by examining its core films and themes and providing an accessible introduction to critical debates. The book goes beyond the classical canon to examine the ways in which noir continues to have a diverse influence on American cinema. It demonstrates the way that noir has intervened in other more established Hollywood genres and also

considers numerous lesser-known examples of the field. Importantly, *100 Film Noirs* has a strong international dimension and provides new and revealing insights into film noirs from France, Germany, Japan, India, Mexico and beyond.

Evolutionary Optimization Jul 19 2021 Evolutionary computation techniques have attracted increasing attention in recent years for solving complex optimization problems. They are more robust than traditional methods based on formal logics or mathematical programming for many real world OR/MS problems. Evolutionary computation techniques can deal with complex optimization problems better than traditional optimization techniques. However, most papers on the application of evolutionary computation techniques to Operations Research /Management Science (OR/MS) problems have scattered around in different journals and conference proceedings. They also tend to focus on a very special and narrow topic. It is the right time that an archival book series publishes a special volume which includes critical reviews of the state-of-art of those evolutionary computation techniques which have been found particularly useful for OR/MS problems, and a collection of papers which represent the latest development in tackling various OR/MS problems by evolutionary computation techniques. This special volume of the book series on Evolutionary Optimization aims at filling in this gap in the current literature. The special volume consists of invited papers written by leading researchers in the field. All papers were peer reviewed by at least two recognised reviewers. The book covers the foundation as well as the practical side of evolutionary optimization.

Financial Accounting and Reporting Jul 31 2022 Financial Accounting and Reporting is the most up to date text on the market. Now fully updated in its fourteenth edition, it includes extensive coverage of International Accounting Standards (IAS) and International Financial Reporting Standards (IFRS). This market-leading text offers students a clear, well-structured and comprehensive treatment of the subject. Supported by illustrations and exercises, the book provides a strong balance of theoretical and conceptual coverage. Students using this book will gain the knowledge and skills to help them apply current standards, and critically appraise the underlying concepts and financial reporting methods.

Pandemics: Insurance and Social Protection Sep 08 2020 This open access book collects expert contributions on actuarial modelling and related topics, from machine learning to legal aspects, and reflects on possible insurance designs during an epidemic/pandemic. Starting by considering the impulse given by COVID-19 to the insurance industry and to actuarial research, the text covers compartment models, mortality changes during a pandemic, risk-sharing in the presence of low probability events, group testing, compositional data analysis for detecting data inconsistencies, behavioural aspects in fighting a pandemic, and insurers' legal problems, amongst others. Concluding with an essay by a practicing actuary on the applicability of the methods proposed, this interdisciplinary book is aimed at actuaries as well as readers with a background in mathematics, economics, statistics, finance, epidemiology, or sociology.

Project Scheduling Jan 13 2021 Our objectives in writing *Project Scheduling: A Research Handbook* are threefold: (1) Provide a unified scheme for classifying the numerous project scheduling problems occurring in practice and studied in the literature; (2) Provide a unified and up-to-date treatment of the state-of-the-art procedures developed for their solution; (3) Alert the reader to various important problems that are still in need of considerable research effort. *Project Scheduling: A Research Handbook* has been divided into four parts. Part I consists of three chapters on the scope and relevance of project scheduling, on the nature of project scheduling, and finally on the introduction of a unified scheme that will be used in

subsequent chapters for the identification and classification of the project scheduling problems studied in this book. Part II focuses on the time analysis of project networks. Part III carries the discussion further into the crucial topic of scheduling under scarce resources. Part IV deals with robust scheduling and stochastic scheduling issues. Numerous tables and figures are used throughout the book to enhance the clarity and effectiveness of the discussions. For the interested and motivated reader, the problems at the end of each chapter should be considered as an integral part of the presentation.

Mediating Empire Jan 31 2020 As part of the growing scholarship on family and empire, this study examines Britain's presence in China through the lens of one family, arguing that, as the physical embodiment of the imperial project, it provided a social and cultural mechanism for mediating Britain's imperial power, authority and presence, and forging connections and networks throughout the expanding British world. Drawing on public and private papers, it breaks significant new ground in its development of those themes.

Introduction to Space Syntax in Urban Studies Jun 05 2020 This open access textbook is a comprehensive introduction to space syntax method and theory for graduate students and researchers. It provides a step-by-step approach for its application in urban planning and design. This textbook aims to increase the accessibility of the space syntax method for the first time to all graduate students and researchers who are dealing with the built environment, such as those in the field of architecture, urban design and planning, urban sociology, urban geography, archaeology, road engineering, and environmental psychology. Taking a didactical approach, the authors have structured each chapter to explain key concepts and show practical examples followed by underlying theory and provided exercises to facilitate learning in each chapter. The textbook gradually eases the reader into the fundamental concepts and leads them towards complex theories and applications. In summary, the general competencies gain after reading this book are: – to understand, explain, and discuss space syntax as a method and theory; – be capable of undertaking various space syntax analyses such as axial analysis, segment analysis, point depth analysis, or visibility analysis; – be able to apply space syntax for urban research and design practice; – be able to interpret and evaluate space syntax analysis results and embed these in a wider context; – be capable of producing new original work using space syntax. This holistic textbook functions as compulsory literature for spatial analysis courses where space syntax is part of the methods taught. Likewise, this space syntax book is useful for graduate students and researchers who want to do self-study. Furthermore, the book provides readers with the fundamental knowledge to understand and critically reflect on existing literature using space syntax.

[Habitus: a Sense of Place](#) Jun 25 2019 Habitus is a concept developed by the late French sociologist, Pierre Bourdieu, as a 'sense of one's place...a sense of the other's place'. It relates to our perceptions of the positions (or 'place') of ourselves and other people in the world in which we live and how these perceptions affect our actions and interactions with places and people. Habitus implies that a web of complex processes links the physical, the social and the mental. Inspired by this concept, this compelling book brings together leading scholars from interdisciplinary fields to examine ways in which spaces and places are constructed,

interpreted and used by different people. This second edition contains updated chapter material, together with an entirely new introduction and revised conclusions which recognise the importance of Bourdieu's work. This publication is a tribute to Pierre Bourdieu's remarkable contribution to the fields of sociology, anthropology, geography, political philosophy and urban planning.

Forensic Psychiatry and Psychology in Europe May 29 2022 This study guide aims to make European trainees in forensic psychiatry and psychology and young forensic psychiatrists and psychologists aware of the differences and commonalities in forensic psychiatry and psychology in different countries within Europe and to enable them to learn from the approaches adopted in each country. The guide is divided into five main sections that address legal frameworks, service provision and frameworks, mandatory skills, teaching and training in forensic psychiatry and psychology, and capita selecta. In addition, recommendations are made with respect to the practice of teaching and training across European countries. It is anticipated that the guide will provide an excellent means of improving specific skills and that, by learning about the offender/patient pathways in the different jurisdictions of Europe, the reader will gain a deeper understanding of the principles that govern methods and practices in their own work with mentally disordered offenders.

The Economics of Asymmetric Information Mar 27 2022 This book presents recent developments in the economics of asymmetric information. The problems of selection and moral hazard, with hidden actions or hidden information, are introduced by examining how they affect the market for investment finance. The ideas are then used to analyse the market for insurance, signalling and screening models of education, efficiency wages, industrial regulation, public procurement and auctions. Coverage is thorough while avoiding excessive mathematical detail. Diagrams and verbal reasoning make the ideas accessible to intermediate level undergraduate students and beyond.

Feasibility and Infeasibility in Optimization: Nov 10 2020 Written by a world leader in the field and aimed at researchers in applied and engineering sciences, this brilliant text has as its main goal imparting an understanding of the methods so that practitioners can make immediate use of existing algorithms and software, and so that researchers can extend the state of the art and find new applications. It includes algorithms on seeking feasibility and analyzing infeasibility, as well as describing new and surprising applications.
