**SOA in Practice** Jul 05 2020 This book demonstrates service-oriented architecture (SOA) as a concrete discipline rather than a hopeful collection of cloud charts. Built upon the author's firsthand experience rolling out a SOA at a major corporation, SOA in Practice explains how SOA can simplify the creation and maintenance of large-scale applications. **Fusing Decision Support Systems Into the Fabric of the Context Dec 30 2019** The field of Information Systems has been shifting from an 'immersion view', which relies on the immersion of information technology (IT) as part of the business environment, to a 'fusion view' in which IT is fused within the business environment, forming a unified fabric that integrates work and personal life, as well as personal and public information. In the context of this fusion view, decision support systems should achieve a total alignment with the context and the personal preferences of users. The advantage of such a view is an opportunity of seamless integration between enterprise environments and decision support system components. Thus, researchers and practitioners have to address the challenges of dealing with this shift in viewpoint and its consequences for decision making and decision support systems theories and applications. This book presents the latest innovations and advances in decision support systems with a special focus on the fusion view. These achievements will be of interest to all those involved and interested in decision making practice and research, as well as, more generally, in the fusion view of modern information systems. The book covers a wide range of topical themes including a fusion view of business intelligence and data warehousing, applications of multi-criteria decision analysis, intelligent models and technologies for decision making, knowledge management, decision support approaches and models for emergency management, and medical and other specific domains.

**Creating A Customer-Focused Help Desk Mar 13 2021** This volume came about as a result of the authors' own practical experience in Help Desk operation and management and of hundreds of workshops the authors have conducted world-wide over the last fifteen years. It is intended to be a practical reference guide, but the suggestions, checklists and templates all need to be interpreted and amended in the light of the culture, technology, service maturity and constraints of each individual organization. Delegates frequently ask us: "What is the best Help Desk software package?" or "What is the best way to set up a Help Desk?" Our only response has to be "Best for whom? It all depends." A key objective of this book is to show how and why "It all depends" and to provide readers with the best possible information on which to understand and evaluate options and to select the best - for them. If there is one thing we have learned over the last years, it is this: Good service has no history. Bad service has infinite history. Based on extensive feedback from delegates from most of the Fortune 1,000 companies who have attended courses presented through Frost & Sullivan (Europe), AIC (South Africa), Monadnock (UK), The Infomatics Resource Centre (UK), IIR (UK), Digital Equipment (UK), Logtel (South America), CEL (Asia Pacific), UPMOCL (Middle East), Finborough Seminars, as well as delegates of in-company training for organizations like Dow Europe (Switzerland), The Intervention Board, BP, Shell International Petroleum, Logica (UK), Arthur Andersen (UK), Rolls Royce (UK), Global One (Germany and USA), Caterpillar (Switzerland), GAK (Netherlands), European Commission (Belgium), Transnet (South Africa), Sun Valley (UK), Nikon Precision (UK).
