Today, in the twenty-first century, we witness the emergence of a new class of beings: organisms that are first imagined and then–through the agency of biotechnologies–brought to life. What once was myth is today a medium. In Eduardo Kac: [Life Extreme](#), Kac, the pioneer of "bio art" who is internationally recognized for celebrated works such as "Genesis" and the fluorescent green "GFP Bunny," has selected 36 new organisms and invited the prominent philosopher Avital Ronell to discover these new beings. The book, published in Dis Voir's new Encountersseries, is prefaced by Kac's "Anthroduction" and includes a whimsical taxonomy of taxonomies, offering a unique classification method for future species.

Archispeak Jul 28 2019 Widely used in architectural circles in the heat of discussion, the recurrent use of particular words and terms has evolved into a language of design jargon. Commonly found in architectural literature and journalism, in critical design debate and especially in student project reviews, Archispeak can seem insular and perplexing to others and -- particularly to the new architectural student -- often incomprehensible. There is a need to translate architectural design concepts into spoken and written commentary -- each word in use embodying a precise and universally accepted architectural meaning. If we explore the vocabulary of this language we gain insight into good design practice and into collective understanding of what constitutes a refined architecture. This unique illustrated guide will help students understand the nuances of this specialized language and help them in communicating their own design ideas.

Learning Solution-Focused Therapy Dec 13 2020 Solution-focused therapy is an evidenced-based practice that focuses on creating conversations that build solutions, rather than solve problems. *Learning Solution-Focused Therapy: An Illustrated Guide* teaches readers how to practice and become competent in conducting solution-focused therapy, an area of growing interest as the emphasis on brief therapy increases. Critical to the book's learning strategy is the generous use of case illustrations that are detailed, rich, and instructive without being overly didactic. The case approach provides an effective means for seeing concepts put into practice, and since medicine is becoming more patient-focused, the solution-focused therapy model is highly relevant. Organized to show how a solution-focused interview is conducted, the book presents the basic model and goes on to apply this model in psychopharmacology, addiction, supervision and consultation. Each chapter combines readings, solution-focused questions, case illustrations, learning exercises and video demonstrations (available online), which together constitute a comprehensive course in this therapeutic modality. Moreover, the author's conversational writing style makes the tenets and techniques accessible and interesting to a wide variety of clinicians. *Learning Solution-Focused Therapy: An Illustrated Guide* will appeal to clinicians who wish to enhance their skills and support their patients' growth in a positive way.

PBS Illustrated Guide to Aerodynamics 2/E Apr 16 2021 Most pilots and flight students wince at the mention of the term "aerodynamics" because most courses and books dealing with the subject do so using complicated scientific theory and intricate mathematical formulas. This unique introductory guide, which sold more than 20,000 copies in its first edition, proves that the principles of flight can be easy to understand, even fascinating, to pilots and technicians who want to know how and why an aircraft behaves as it does. Avoiding technical jargon and complex calculations, Hubert "Skip" Smith demonstrates how aerodynamic factors affect all aircraft in terms of lift, thrust, drag, in-air performance, stability, and control. Readers also get an inside look at how modern aircraft are designed-including all the steps in the design process, from concept to test flight and the reasoning behind them. This edition features expanded coverage of aircraft turning and accelerated climb performance, takeoff velocities, load and velocity-load-factors, area rules, and hypersonic flight, as well as the latest advances in laminar flow airfoils, wing and fuselage design, and high-performance lightplanes.
