Old House Interiors Jan 03 2020 National architectural magazine now in its fifteenth year, covering period-inspired design 1700-1950.

Commissioned photographs show real homes, inspired by the past but livable. Historical and interpretive rooms are included; new construction, additions, and new kitchens and baths take their place along with restoration work. A feature on furniture appears in every issue. Product coverage is extensive. Experts offer advice for homeowners and designers on finishing, decorating, and furnishing period homes of every era. A garden feature, essays, archival material, events and exhibitions, and book reviews round out the editorial. Many readers claim the beautiful advertising-all of it design-related, no "lifestyle" ads-is as important to them as the articles.

Growing Fruit for Home Use Nov 05 2022 "Well-ripened sound fruit is healthful. It is also a valuable food. It should form a part of every meal, fresh where possible, or dried, canned or otherwise preserved. Home-grown fruit is desirable -- Because it reaches the family fresh and in the best possible condition. Because the family has fruit of which it would often be deprived if it had to be purchased. Because, if the proper varieties to be selected, a continuous supply of fruit of superior quality may be secured regardless of market prices. Because any surplus may be sold without difficulty or may be canned, evaporated, or otherwise conserved for use when fresh fruit is not available. Because the care of the home fruit garden provides for spare time congenial and profitable occupation which is in reality recreation for those who enjoy seeing things grow, This bulletin aims to furnish, in concise form, information that will be of practical help to the beginner in fruit growing. It deals with the widely grown, temperate-climate fruits, such as the apple, pear, peach, and plum. Lists of desirable varieties of these fruits are given for the different parts of the country. Because of the number of fruits considered and the territory covered, cultural directions are necessarily brief, but they cover the most important general points." -- p. 2

Far Infrared Mineral Weight Loss Wrap Course for Clinic and Home Use Apr 17 2021 Far Infrared Mineral Weight Loss Wrap is part of the Mineral Wrap treatments range developed by Pure Nature Cures. It is based on the detoxifying nature of clay, far-infrared heat, and relaxing and stimulating properties of magnesium salts. The main goal of the treatment is to boost metabolism thus helping anyone on a weight loss program to lose extra pounds. Clays have a remarkable property to exchange negatively charged ions of sodium, calcium, potassium, magnesium for ions of heavy metals. They also have a warming effect on the body, promoting circulation and speeding up metabolic rate. Magnesium salts, especially magnesium chloride, are used not only to relax but to supplement the body with magnesium. Transdermal magnesium supplementation is one of the fastest ways to deliver magnesium to the body cells. Magnesium is one of the most important minerals for us, taking part in over 300 reactions. It plays an integral role in the production of energy within the cell. If there is not enough magnesium, energy cannot be produced, and this results in cell inactivity, or low activity, which slows down metabolism. Far Infrared Mineral Weight Loss wraps aim to address the issue holistically, providing the body with what it needs most - energy - to boost metabolic activity, giving us the energy we need so badly to start losing excessive weight. Far infrared heat which is generated by a far-infrared blanket has multiple benefits of its own, speeding up the process. The numerous healing properties of the Far-Infrared heat are based on a simple spectrum of rays invisible to us - far-infrared rays. 80% of the total energy produced by the sun consists of Far Infrared rays. Unlike near-infrared rays which only heat up the surface, far-infrared rays penetrate deep into the tissues stimulating a whole range of activities. The great news is that the body produces far-infrared energy naturally. When the body is healthy it produces sufficient amounts of this energy which helps the body cells and organs to function to their full capacity. However, when the production of this energy is low, our bodies begin to suffer from energy deficiency, and we succumb to all sorts of ailments. Boosting the body systems with infrared light from outside is like giving water to a thirsty man. It gives energy to all the body cells, thus stimulating their activity, and this, in turn, kick-starts healing processes from the inside and general recovery. We can feel the far-infrared energy as a slow-acting deep heat. It gets deep into the body boosting the energy of every cell, widening blood capillaries, stimulating circulation and boosting all the body systems. Three very powerful components are used in the treatment. The process is holistic, acting on all the cells and systems, by stimulating them, promoting detoxification, boosting metabolism by activating the energy-producing molecule in the cell, stimulating circulation and getting the body into the freeing and burning what it does not need.

Transformative Pedagogical Perspectives on Home Language Use in Classrooms Sep 22 2021 Linguists, researchers, and other practitioners in language education acknowledge that the resolution of language problems associated with breaking down language and cultural barriers that hinder the growth of learners' self-identities and national identities is ongoing. In fact, even with decades of research in home language use in the classroom, there are still classrooms worldwide where learners are deprived of the opportunity of building their self-esteem, confidence, and autonomy by communicating with their native language. The global nature of communication requires speakers to use all the languages in their repertoire effectively, thus reinforcing the need to encourage home language use in classrooms. Transformative Pedagogical Perspectives on Home Language Use in Classrooms is a cutting-edge research publication on the effective use of home language in the classroom that emphasizes the significance of this activity to the success of the overall language development of the learner. Particular attention is given to transformative pedagogy and the provision of valuable insights into how the teacher can guide and assist learners in the development of critical thinking skills. In addition, the book provides content that enables practitioners in language education and parents to explore their roles in assisting children in breaking down the language and cultural barriers that hinder the growth of their self-identity and national identity. Highlighting topics such as engineering education, cultural responsiveness, and transformative pedagogy, this book is essential for linguists, academicians, education professionals, curriculum designers, policymakers, administrators, instructional designers, researchers, and students.

Innovations in Home Energy Use Nov 24 2021 As a collection of essays that explore innovations to encourage reduction in homeowner energy use, this volume reflects a confluence of ideas and initiatives rather than a narrow look at what a single, particular line of academic literature suggests might be possible to shape homeowner behavior. Not only do the contributors represent a wide array of institutions and backgrounds, but the very intellectual infrastructure that encouraged and allowed the summit that inspired this book itself represents a conscious effort to facilitate multidisciplinary and interdisciplinary collaboration for the purpose of addressing salient societal concerns. With this volume, we hope to provide a source of ideas for behavior change that will appeal to a range of people charged with curbing residential energy use through communication-based intervention.
