John Deere Feb 13 2021 Born in Rutland, Vermont, John Deere served a four-year apprenticeship to a blacksmith and worked in that trade until 1837. The implements being used by pioneer farmers of that day were cumbersome and ineffective for cutting and turning the prairie soil. To alleviate the problem, Deere and a partner, Major Leonard Andrus, designed three new plows in 1838. The plow was so successful that by 1846 Deere and his partner were selling a thousand a year. Deere then sold his interest to Andrus and organized a plow company in Moline, Illinois. After experimenting with imported

The John Deere Story Jan 15
2021 Today, John Deere is
remembered-some say

mistakenly-as the inventor of
the steel plow. Who was this
legendary man and how did he
create the internationally
renowned company that still
bears his name? He began as a
debt-stricken blacksmith who,
fleeing debt in New England in
the 1830s, set up shop in a
little town on the Illinois
frontier. There, in response to
farmers' struggles, he designed
a new plow that cut through
the impervious prairie sod and
lay open the rich, heavy soil for
planting. The demand for his
polished steel plow convinced
him to specialize in farm
implements. In the decades
before the Civil War, John
Deere envisioned a company
supplying midwestern farmers

with reliable, affordable
equipment. He used only high
quality, imported steel and
resisted pressure to raise
prices. At the same time, he
won respectful affection from
his employees by working
alongside them on the shop
floor. Upon taking the helm in
the 1860s, John's only surviving
son, Charles, expanded the
Moline factories to increase
production, started branch
houses in major midwestern
cities to speed distribution, and
began to transform the
company into a modern
corporation. The
transformation didn't come
without difficulties however:
Charles found himself battling
the Grange, facing threats of
