*The Routledge Handbook of Hospitality Management* Apr 04 2020 Hospitality is an industry characterised by its complex nature and numerous sectors including hotels, hostels, B&Bs, restaurants, pubs, nightclubs and contract catering. However, despite its segmentation, there are key issues that are pertinent to all subsectors. The Routledge Handbook of Hospitality Management adopts a strategic approach and explores and critically evaluates current debates, issues and controversies to enable the reader to learn from the industry's past mistakes as well as future opportunities. Especially relevant at a time when many sectors of the industry have to re - evaluate and reinvent themselves in response to the economic downturn the Handbook brings together specialists from both industry and academia and from a range of geographical regions to provide state-of-the-art theoretical reflection and empirical research. Each of the five inter related sections explores and evaluates issues that are of extreme importance to hospitality organisations, many of which have not been adequately explored before: external and internal customers, debates surrounding finance, uncertainty risk and conflict, sustainability, and e-Hospitality and Technology. This book is an invaluable resource for all those with an interest in hospitality, encouraging dialogue across disciplinary boundaries and areas of study. It is essential reading for students, researchers & academics and managers of Hospitality as well as those of Tourism, Events, Marketing, and Business Management.

**Social Work in a Global Context** Dec 13 2020 Social Work in a Global Context engages with, and critically explores, key issues that inform social work practice around the world. Social work can take many forms, and is differently understood in different parts of the world. However, at base, it can be seen as a profession which strives to advance the causes of the vulnerable and marginalised with the aim of promoting social justice, equality, and human rights. This text provides examples of social work in a wide range of countries, informing our understanding of what social work is. It looks at how practice changes or stays the same, and at the impact of policy, as experienced by service users as well as by practitioners working in challenging circumstances. It also meaningfully reflects on the strengths and challenges that are enabled by diversity. Divided into four parts, this wide-ranging text discusses: - what social work means in four different countries -some examples of the impact social and political context can have on social work practice - how social workers see and work with the vulnerable - the future for social work, from disaster work to involving service users. Social Work in a Global Context is the first truly international book for all those interested in comparative and cross-cultural understandings of social work.

*Technolife 2035* May 06 2020 Technology constantly evolves, usually slowly and insidiously – but always just as surely. Things that are currently being developed in laboratories will be in the public domain as different products and applications perhaps as soon as in a few years' time, and as more refined versions in around ten years' time. This book deals with the future of technology, and explores the influence new technologies may have on life within the next twenty years. It is divided into three parts, the first of which discusses technological development and the forces and counter-forces related to it. This section also reviews how advances in technology are forecasted, and what kinds of parties make these predictions, and provides examples of forecasts for the next couple of decades. The second part of the book investigates the various areas of technology and their related trends. This section discusses current technological studies which may have concrete impacts in everyday life in a few decades, such as those in the fields of energy, transportation, biotechnology, materials, ICT, robotics, medical technology and space technology. The third part of the book introduces the authors' visions of how technology may develop by 2035, and presents three different scenarios, or future worlds. These will demonstrate the possible directions in which technological development can take us. The scenarios are introduced through two main characters, Romeo and Juliet (adapted from Shakespeare's play) in the year 2035. Even though technology is constantly changing, the writers believe that, even years into the future, the significance of human relations will remain the greatest influence on human life.

[Sins of the Father](#) Sep 29 2019 The questions surrounding how the Irish economy was brought to the brink - who was to blame, and who should pay for these mistakes - have been rightly debated at length. But beyond this very legitimate exercise, there are deeper questions that need to be answered. These questions relate to why we made the decisions we did, not just in the last ten years, but over the last eighty. How did certain industries become more prominent at the expense of others, banking as opposed to fisheries, international markets as opposed to indigenous industry and job creation? Are our problems structural in nature, and most importantly, what do we need to know to make sure that this crisis does not happen again? These are the questions set by this book. It will look at the development of the Irish economy over the past eight decades, and will argue that the 2008 financial crisis, up to and including the IMF bailout of 2010 and the subsequent change of government, cannot be explained simply by the moral failings of those in banking or property development alone. The problems are deeper, more intricate, and more dangerous if we remain unaware of them, but also potentially avoidable in the future if we break the cycle.

*Are Libraries Obsolete?* Aug 09 2020 The digital age has transformed information access in ways that few ever dreamed. But the afterclap of our digital wonders has left libraries reeling as they are no longer the chief contender in information delivery. The author gives both sides--the web aficionados, some of them uninged, and the traditional librarians, some blinkered--a fair hearing but misconceptions abound. Internet be-all and end-all enthusiasts are no more useful than librarians who urge fellow professionals to be all things to all people. The American Library Association, wildly democratic at its best and worst, appears schizophrenic on the issue, unhelpfully. "My effort here," says the author, "is to talk about the elephant in the room." Are libraries obsolete? No! concludes the author (also). The book explores how libraries and librarians must and certainly can continue to be relevant, vibrant and enduring.

**Energy from the Earth** Apr 16 2021 Switzerland's Energy Strategy 2050 requires energy efficiency to be substantially improved, the proportion of fossil fuels in the energy supply to be considerably reduced, and nuclear power to be phased out, while meeting highly ambitious climate protection targets. One of the core implications is the need for a massive increase of the use of renewable sources for electricity generation. In this context, the Swiss Federal Office of Energy (SFOE) estimates that by 2050 deep geothermal energy could contribute 4–5 TWh per year to electricity generation in Switzerland, which would be a substantial contribution to a projected annual power need of 60 TWh. Geothermal energy is attractive because of the very large scale of the resource, its expected relatively low CO2 emissions, and its reliable, all-day domestic availability. However, the future contribution of deep geothermal energy is subject to major uncertainties: How much of this resource can be exploited and at what economic cost? What are the environmental and risk-related externalities that the public must be willing to bear? How does its overall performance compare to competing energy resources? And will the regulatory framework and public acceptance be sufficient to allow geothermal energy to provide a significant contribution? By way of this major interdisciplinary study, already considered a work of reference, TA-SWISS provides answers to these questions in a comprehensive and balanced way, thereby supplying a sound basis for stakeholder decision-making.

**Studies in Australian Political Rhetoric** Sep 09 2020 This edited collection includes eleven major case studies and one general review of rhetorical contest in Australian politics. The volume showcases the variety of methods available for studying political speech, including historical, theoretical, institutional, and linguistic analyses, and demonstrates the centrality of language use to democratic politics. The chapters reveal errors in rhetorical strategy, the multiple and unstable standards for public speech in Australia, and the links between rhetoric and action. The length of Australian political speech is traversed, from pre-Federation to the Gillard minority government (2010–13), and the topics similarly range from Alfred Deakin's nation building to Kevin Rudd's Apology to the Stolen Generations. This fresh collection is intended to stimulate and advance the study of political rhetoric in Australia.

**The New International Telecommunication Regulations and the Internet** Jul 08 2020 This book provides a clear and thorough account of the process leading up to the revision of the International Telecommunication Regulations (ITRs) one of the four treaties administered by the ITU. The author's inside view of the events and his legal analysis of the new ITRs, are different from that what has been aired in most other accounts to date. His systematic approach shows how much of the criticism of the WCIT-12 process and of the ITRs themselves, is unjustified. This book provides the most accurate view to date of what the ITRs really mean and of what really happened at WCIT-12, which was undoubtedly a key event in the history of telecommunication policy and which is likely to have significant long-term effects. The book covers in some detail the events leading to the non-signature of the treaty by a significant number of states, outlines possible consequences of that split between states, and offers possible ways forward. The book includes a detailed article-by-article analysis of the new ITRs, explaining their implications and concludes with recommendations for national authorities. It concludes with an analysis of events from the point of view of dispute resolution theory, offering suggestions for how to avoid divisive outcomes in the future. "This is an excellent book, and quite rich and comprehensive. The topic is important and the book will surely be of interest to regulators, diplomats, policy experts, and all those who participated in WCIT. The author is uniquely qualified to write an analysis of the new ITRs and an account of the Conference. This book will be a good reference for the next Plenipotentiary Conference to be held in 2014 which is going to discuss follow-up to WCIT-12." Naser al-Rashedi, United Arab Emirates. "This is an authoritative expert account of a moment of high significance for vital issues with respect to international networks." Professor Dan Schiller, University of Illinois. "This is an excellent and timely work." Professor Ian Walden, Queen Mary, University of London. "Interested persons, businesses and governments can draw their policies from the assessments of a telecommunications insider as presented in this book. The manifold arguments enlightening the interpretation of the provisions of the ITRs might become an invaluable guidance for those who apply the ITRs in the future." Professor Dr. Rolf H. Weber, University of Zurich.

**How to Design Wastewater Systems for Local Conditions in Developing Countries** Jul 28 2019 This is a practical handbook providing a step-by-step approach to the techniques used for characterizing wastewater sources and investigating sites where collection, treatment and reuse/disposal technologies will be installed. It is intended to help enable local implementation of on-site and decentralized wastewater management system (DWMS) for wide scale use in development settings. How to Design Wastewater Systems for Local Conditions in Developing Countries helps local service providers and regulatory officials make informed decisions through the use of tools, checklists and case studies. It includes a link to a web based community of on-site and decentralized wastewater professionals, which contains related tools and case studies. This handbook serves as a reference for training classes, certification programs, and higher education programs in civil and sanitary engineering. There is an increasing interest on the part of local government officials and private sector service providers to implement wastewater treatment systems to solve sanitation problems. The model presented in this handbook promotes activities that first generate data related to source and site conditions that represent critical inputs, and then applies this information to the technology selection process. Matching the most appropriate technologies to the specific needs of the wastewater project is the key that leads to long term sustainability. How to Design Wastewater Systems for Local Conditions in Developing Countries is an invaluable resource for public sector decision makers and private sector service providers in developing countries. It is also a useful text for students at engineering colleges in developing countries interested in taking a class that teaches the methods of decentralized wastewater management system (DWMS) development.

**Concepts of Music and Copyright** May 18 2021 Copyright specialists have often focused on the exploitation of copyright of music and on infringement, but not on the question of how copyright conceptualises music. This highly topical volume brings together specialists in music, musicology and copyright law, providing a genuinely interdisciplinary research approach. It compares and contrasts the concepts of copyright law with those of music and musical performance. Several tensions emerge between the ideas of music as a living art and of the musical work as a basis for copyright protection. The expert contributors discuss the notions of the musical work, performance, originality, authorship in music and in copyright, and co-ownership from the disciplinary perspectives of music, musicology and copyright law. The book also examines the role of the Musicians' Union in the evolution of performers' rights in UK copyright law, and, in an empirical study, the transaction costs theory for notice-and-takedown regimes in relation to songs uploaded on YouTube. This unique study offers an interdisciplinary perspective for academics, policymakers and legal practitioners seeking a state-of-the-art understanding of music and copyright law.
