Computational Social Science and Complex Systems Jan 19 2022 For many years, the development of large-scale quantitative social science was hindered by a lack of data. Traditional methods of data collection like surveys were very useful, but were

limited. The situation has of course changed with the development of computing and information communication technology, and we now live in a world of data deluge, where the question has become how to extract important information from the plethora of data that can be accessed. Big Data has made it possible to study societal questions which were once impossible to deal with, but new tools and new multidisciplinary approaches are required. Physicists, together with economists, sociologists, computer scientists, etc. have played an important role in their development. This book presents the 9 lectures delivered at the CCIII Summer Course Computational Social Science and Complex Systems, held as part of the

International School of Physics Enrico Fermi in Varenna, Italy, from 16-21 July 2018. The course had the aim of presenting some of the recent developments in the interdisciplinary fields of computational social science and econophysics to PhD students and young researchers, with lectures focused on recent problems investigated in computational social science. Addressing some of the basic questions and many of the subtleties of the emerging field of computational social science, the book will be of interest to students, researchers and advanced research professionals alike.

right new or used truck, and which accessories make sense for your needs. Step-by-step procedures with hundreds of photos cover basic maintenance and more complicated work, like tune-ups, valve adjustments, brake jobs and installing aftermarket suspension/lift kits. Get the hot set-up for your truck, whether you want low-end torque or high-RPM power. Moses gives specific tuning recommendations for engines from the early inline-6s to the advanced 4.5L 24-valve DJ engine. He shares expert insights into the best high performance components and the latest technology from Toyota Racing Development. You'll also find suspension and chassis modifications, and the best tire and wheel combinations.

Accounting Information Systems Jul 13 2021 Gain a strong understanding of the accounting information systems and related technologies you'll use in your business career with Hall's leading ACCOUNTING INFORMATION SYSTEMS, 9E. You'll find a unique emphasis on ethics, fraud, and the modern manufacturing environment. The book focuses on the needs and responsibilities of accountants as end users of systems, systems designers, and auditors. This text completely integrates Sarbanes-Oxley as it affects internal controls and other relevant topics. In this new edition, with thorough updates of the transaction cycle and business processes coverage, you examine the risks and advantages of cloud computing and gain a better understanding of the differences in the manual and automated accounting system needs of small and large companies. Virtual Airplane vol. 1:

Preparations Jun 12 2021 The
four volumes of the "Virtual
Airplane" series will teach you
how to create the model shown
on the cover. This guide
assumes that you may know
nothing about the 3D modeling
software, so it starts the course
from the very basics. In
subsequent chapters the author
builds a computer model of the
P-40B fighter, gradually
introducing new methods and
tools. Every step of this
workflow is shown in numerous
illustrations. This first volume
("Preparations") describes how
to prepare and verify the
reference drawings, which you

need to build a 3D model.
"Preparations" also discusses
various methods of checking
and enhancing these reference
images. It can be useful, as a
guide on its own, for all who
would like to draw accurate
scale plans. You can learn
there how to use photos and
original aircraft documentation
(including manufacturer's
blueprints).

Simulative Investigation of Post-Oxidation in the Exhaust Manifold of SI Engines

Apr 29 2020 Jan
Przewlocki provides a deep
insight into the post-oxidation
processes in an exhaust
manifold of an SI engine.
Besides the evaluation of 3D-
CFD simulation results, tools
are developed to evaluate them
in a target-oriented way. In
addition, a 1D post-oxidation
simulation model was
developed that is capable of
reliably predicting post-
oxidation effects within the
exhaust manifold. This study
shows the development process
of the 1D model approach and
elaborates its strengths and
weaknesses. Contents Reaction

Theory of Accretion Disks Sep

03 2020 With the advent of space observatories and modern developments in ground based astronomy and concurrent progress in the theoretical understanding of these observations it has become clear that accretion of material on to compact objects is an ubiquitous mechanism powering very diverse astrophysical sources ranging in size and luminosity by many orders of magnitude. A problem common to these systems is that the material accreted must in general get

rid of its angular momentum and this leads to the formation of an Accretion Disk which allows angular momentum redistribution and converts potential energy into radiation with an efficiency which can be higher than the nuclear burning yield. These systems range in size from quasars and active galactic nuclei to accretion disks around forming stars and the early solar system and to compact binaries such as cataclysmic variables and low-mass X-ray binaries. Other objects that should be mentioned in this context are 88433, the black hole binary candidates, and possibly gamma-ray burst sources.

Observations of these systems have provided important constraints for theoretical accretion disk models on widely differing scales, luminosities, mass-transfer rates and physical environments.
