[Machine Learning Bookcamp](#) Apr 30 2020 The only way to learn is to practice! In Machine Learning Bookcamp, you'll create and deploy Python-based machine learning models for a variety of increasingly challenging projects. Taking you from the basics of machine learning to complex applications such as image and text analysis, each new project builds on what you've learned in previous chapters. By the end of the bookcamp, you'll have built a portfolio of business-relevant machine learning projects.

hiring managers will be excited to see. about the technology
Machine learning is an analysis technique for predicting trends and relationships based on historical data. As ML has matured as a discipline, an established set of algorithms has emerged for tackling a wide range of analysis tasks in business and research. By practicing the most important algorithms and techniques, you can quickly gain a footing in this important area. Luckily, that's exactly what you'll be doing in Machine Learning Bookcamp. about the book In Machine Learning Bookcamp you'll learn the essentials of machine learning by completing a carefully designed set of real-world projects. Beginning as a novice, you'll start with the basic concepts of ML before tackling your first challenge: creating a car price predictor using linear regression algorithms. You'll then advance through increasingly difficult projects, developing your skills to build a churn prediction application, a flight delay calculator, an image classifier, and more. When you're done working through these fun and informative projects, you'll have a comprehensive machine learning skill set you can apply to practical on-the-job problems. what's inside Code fundamental ML algorithms from scratch Collect and clean data for training models Use popular Python tools, including NumPy, Pandas, Scikit-Learn, and TensorFlow Apply ML to complex datasets with images and text Deploy ML models to a production-ready environment about the reader For readers with existing programming skills. No previous machine learning experience required. about the author Alexey Grigorev has more than ten years of experience as a software engineer, and has spent the last six years focused on machine learning. Currently, he works as a lead data scientist at the OLX Group, where he deals with content moderation and image models. He is the author of two other books on using Java for data science and TensorFlow for deep learning.

least survived her encounter with Dayton Leroy Rogers to detail its horrors. But a long list of other women were not as fortunate. Their stories had to be painstakingly pieced together by police from the corpses on the most shocking trail of terror ever left by a serial killer. The Man Who Loved to Kill Women--Dayton Leroy Rogers was known in Portland, Oregon as a respected businessman and devoted husband and father. But at night he abducted women, forced them into sadistic bondage games, and thrilled in their pain, terror and mutilation. His murderous spree was stopped only after, in plain view, he slashed to death his final victim...and when a hunter accidentally stumbled onto the burial grounds of seven other women Rogers had killed one-by-one in the depths of the Molalla Forest did police realize they were dealing with a killer whose bloodlust knew no bounds. This is the shocking true story of the horrifying crimes, capture, and conviction of Dayton Leroy Rogers, Oregon's mild-mannered businessman by day--vicious serial killer by night.

The Car Show Jun 13 2021 This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with "motor" referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.
