Motorized Obsessions Nov 28 2019 2008 Outstanding Academic Title, Choice Magazine From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

Visible Mending Jun 23 2019 "In September 2010 a team of three researchers--two cultural geographers and a photographer--set out to find and visit workplaces in the South West where people repair broken things. Notebooks and cameras were the project tools, and these tools produced an extensive archive of texts and images, a selection of which are printed in this book, the culmination of eighteen months of fieldwork. The project was inspired by an attraction to the aesthetics of these workplaces, but also by an interest in what the practices of fixing, mending, repair and renewal could reveal about the way people value

things, and each other. In the words of Elizabeth Spelman: '... though we do not repair everything we value, we would not repair things unless they were in some sense valuable to us, and how they matter to us shows up in the form of repair we undertake'."-- Front flap.
