Programming Reality Feb 23 2022

"Programming Reality is a collection of original essays that explore the television programs that have thrived in the Canadian regulatory and cultural context - the programs that straddle, and even blur, the border between reality and

fiction. The interdisciplinary articles in *Programming Reality: Perspectives on English-Canadian Television* - the first anthology dedicated exclusively to the analysis of Canadian television content - combine textual analysis with that of the political economy of media communications."--BOOK JACKET.

The Characteristics of Parallel Algorithms

Aug 08 2020 Although there has been a tremendous growth of interest in parallel architecture and parallel processing in recent years, comparatively little work has been done on the problem of characterizing parallelism in programs and algorithms. This book, a collection of original papers, specifically addresses that topic. The editors and two dozen other contributors have produced a work that cuts across numerical analysis, artificial intelligence, and database management, speaking to questions that lie at the heart of current research in these and many other fields of knowledge: How much commonality in algorithm structure is there across problem domains? What attributes of algorithms are the most important in dictating the structure of a parallel algorithm? How can algorithms be matched with

languages and architectures? Their book provides an important starting place for a comprehensive taxonomy of parallel algorithms. The authors are all in the Department of Electrical Engineering at Purdue University. Leah H. Jamieson is a professor, Dennis Gannon an associate professor, and Robert Douglass head of Machine Intelligence. *The Characteristics of Parallel Algorithms* is included in the Scientific Computation Series, edited by Dennis Gannon.

[Beginning Lua Programming](#) Sep 08 2020 This book is for students and professionals who are intrigued by the prospect of learning and using a powerful language that provides a rich infrastructure for creating programs. No programming knowledge is necessary to benefit from this book except for the section on Lua bindings, which requires some familiarity with the C programming language. A certain comfort level with command-line operations, text editing, and directory structures is assumed. You need surprisingly little in the way of computer resources to learn and use Lua. This book focuses on Windows and Unix-like (including Linux) systems, but any operating system that

supports a command shell should be suitable. You'll need a text editor to prepare and save Lua scripts. If you choose to extend Lua with libraries written in a programming language like C, you'll need a suitable software development kit. Many of these kits are freely available on the Internet but, unlike Lua, they can consume prodigious amounts of disk space and memory.
