Media Ownership in Africa in the Digital Age Apr 01 2020 Who owns the media and communications in Africa today and with what implications? The book elegantly answers this urgent question by unpacking multiple dimensions of media ownership through rare and authoritative perspectives, including both historical and contemporary digital developments. It traces the evolving forms of ownership of media and communications in specific African contexts, showing how they interact with broader changes in and outside the continent. The book also shows how Big Techs, such as Meta (formerly known as Facebook), are involved in a scramble for Africa's digital ecosystem and how their advance brings both opportunities and concerns about ownership and control. The chapters analyse evolving forms of ownership and their implications on media concentration and democracy across Africa. The book offers a nuanced account of how media ownership structures are in some instances captured with an ever-growing and complex ecosystem that also has new opportunities for public interest media. Offering a significant representation of the trends and diversity of existing media systems, the book goes beyond the postcolonial geographical divisions of North and Sub-Saharan Africa to highlight common patterns and significant similarities and differences of communications ownerships between and within African countries. The contributors expose media and communications ownership patterns in Africa that are centralised and yet decentralising and in some cases, battling, resurging and globalising.

Aromatic and Heteroatomic Chemistry Apr 13 2021 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued.

Contributions from the Department of Fisheries and the Fishery Research Laboratory, Kyushu University Dec 10 2020

Myocardial Injury Nov 28 2019 The chapters of this book represent contributions by plenary lecturers and invited symposium speakers of the Fourth Annual Meeting of the American Section of the International Society for Heart Research, held on May 26-29, 1982 in New Orleans, Louisiana. The aim of the Organizing Committee was to present an up-to-date picture of our knowledge of myocardial injury which would be equally useful to basic scientists and clinicians. The papers of this volume are divided into two groups: a) those dealing primarily with techniques to study myocardial injury, and b) those that discuss the different types of myocardial injury. The grouping of the papers within each of these headings roughly corresponds to the symposia presented at the meeting. I wish to acknowledge the financial support of the National Institutes of Health. Without grant HL 29149, the program could not have been financed. Contributions from the following companies were also gratefully received: Ayerst Laboratories, Ciba-Geigy, Merck Sharp and Dohme, Pfizer Laboratories Division, A.H. Robbin Co., Smith-Kline Corporation, U.S.V. Pharmaceutical Co., and The Upjohn Co. My thanks are due to the members of The Organizing Committee (Drs. Gregory J. Bagby, Gerald S. Berenson, Alastair H. Burns, Harvey I. Miller, Robert Roskoski, Jr., and Judy A. Spitzer) for their help and support, and to the Secretary of the Meeting, Ms. L. Beatrice Abene for her excellent assistance. John J. Spitzer, M.D.

Origin, Evolution, Environmental Impact of Oceanic LIPs Sep 26 2019 The origin, evolution, and environmental impact of large igneous provinces (LIPs) represents a topic of high scientific importance because the magmatism associated with these features cannot be directly related to plate tectonics, and because the eruption of flood basalts may have global environmental consequences. Oceanic LIPs are even more poorly understood due to their relative inaccessibility. This volume takes a multidisciplinary approach to understanding LIP origin, evolution, and environmental impact in ocean basins. Papers that focus on plate tectonic reconstructions, petrologic and geophysical investigations of various LIPs, and sedimentological and micropaleontological evidence of syn-LIP sediments are presented. Precious materials and data from dredging cruises and scientific ocean drilling expeditions have made this volume possible.

Druggists' Circular Sep 18 2021

Prebiotic Chemistry and the Origin of Life Feb 09 2021 This book presents an overview of current views on the origin of life and its earliest evolution. Each chapter describes key processes, environments and transition on the long road from geochemistry and astrochemistry to biochemistry and finally to the ancestors of today's organisms. This book combines the bottom-up and the top-down approaches to life including the origin of key chemical and structural features of living cells and the nature of abiotic factors that shaped these features in primordial environments. The book provides an overview of the topic as well as its state of the art for graduate students and newcomers to the field. It also serves as a reference for researchers in origins of life on Earth and beyond.

Småstykker 1-16 Jul 29 2022

Handbook of Radiopharmaceuticals May 15 2021 A comprehensive, authoritative and up-to-date reference for the newcomer to radiopharmaceuticals and those already in the field. Radiopharmaceuticals are used to detect and characterise disease processes, or normal biological function, in living cells, animals or humans. Used as tracer molecules, they map the distribution, uptake and metabolism of the molecule in clinical studies, basic research or applied research. The area of radiopharmaceuticals is expanding rapidly. The number of PET centers in the world is increasing at 20% per year, and many drug companies are utilising PET and other forms of radiopharmaceutical imaging to evaluate products. * Readers will find coverage on a number of important topics such as radionuclide production, PET and drug development, and regulations * Explains how to use radiopharmaceuticals for the diagnosis and therapy of cancer and other diseases * The editors and a majority of the contributors are from the United States

Mécaboîtes Jun 27 2022 Le marché des cyclomoteurs, et plus particulièrement de ceux que l'on appelle les "mécaboîtes", est aujourd'hui en pleine expansion. Cet ouvrage, qui s'inscrit dans une collection, est destiné aux utilisateurs de ces véhicules. Il s'intéresse avant tout au plus célèbre des mécaboîtes, le fameux Derbi Senda, dans sa version Supermotard, apparue en 1997. Autour d'une partie principale traitant de l'entretien général du moteur et de la partie cycle, de nombreux articles simples et concis traitent de sujets annexes, mais non moins importants : la conduite d'un mécaboîte, l'équipement de sécurité, la législation en matière de permis et de transformation du véhicule, les pièges de l'occasion... Autant de sujets agrémentés de conseils pratiques et d'illustrations qui permettront à chacun de parfaire sa connaissance de son cyclo et de l'environnement dans lequel il évolue.

Embryo Research in Pluralistic Europe Jan 29 2020 Recent advances in techniques and understanding in the fields of genetics, embryology and reproductive biology have opened up new ways to treat a wide range of medical problems. They range from new options for infertility treatment and pre-implantation genetic diagnosis to stem-cell-based therapies for debilitating diseases. Since all these approaches involve the manipulation of human gametes, embryos or embryonic cells, and could also permit more contentious uses, they have stimulated a controversial debate as to what aims are desirable and to what extent experiments on human embryos are morally permissible, if permissible at all. The situation is further

complicated by the fact that scientific projects are increasingly realized through international co-operation and that patients are increasingly ready to seek morally contentious medical treatment wherever it is available and thus to bypass national legislation. In view of this situation the Europäische Akademie assembled a temporary interdisciplinary project group in which scientists from universities and non-university research organizations in Europe working on the relevant subjects were brought together and charged with establishing a knowledge base and providing suggestions for long-term solutions that would be acceptable for society. Presented here are the results of this project, ranging from a discussion of the theoretical and practical possibilities in human-embryo experimentation and its alternatives in research on adult stem cells, a comparison of the situations and prospects of regulation of embryo research in Europe, a survey of European public attitudes, and a philosophical analysis of the arguments and argumentative strategies used in the debate.

IEEE Membership Directory Jun 23 2019

Quantitative Functional Brain Imaging with Positron Emission Tomography Jun 03 2020 This book presents the latest scientific developments in the field of positron emission tomography (PET) dealing with data acquisition, image processing, applications, statistical analysis, tracer development, parameter estimation, and kinetic modeling. It covers improved methodology and the application of existing techniques to new areas. The text also describes new approaches in scanner design and image processing, and the latest techniques for modeling and statistical analyses. This volume will be a useful reference for the active brain PET scientist, as well as a valuable introduction for students and researchers who wish to take advantage of the capabilities of PET to study the normal and diseased brain. Authored by international authorities in PET Provides the latest up-to-date techniques and applications Covers all fundamental disciplines of PET in one volume A comprehensive resource for students, clinicians, and new PET researchers

Abeta Peptide and Alzheimer's Disease Mar 01 2020 Recent advances in genetics and brain biochemistry point to the Abeta peptide as the major culprit in causing neurodegeneration in Alzheimer's Disease (AD). This book summarizes current knowledge of the Abeta peptide and its role in AD. Written by specialists in this fast moving area, the book covers fundamental biochemical studies on this peptide, the genetic impact on Abeta expression and processing, and various AD therapeutic strategies that target Abeta.

Diagnostics for Experimental Thermonuclear Fusion Reactors 2 Dec 30 2019 This book of proceedings collects the papers presented at the workshop on "Diagnostics for Experimental Fusion Reactors" held at Villa Monastero, Varenna (Italy) September 4-12, 1997. This workshop was the seventh organized by the International School of Plasma Physics "Piero Caldirola" on the topic of plasma diagnostics and the second devoted to the diagnostic studies for the International Thermonuclear Experimental Reactor (ITER). The proceedings of the first workshop on ITER diagnostics were published by Plenum Press in 1996 with the title "Diagnostics for Experimental Thermonuclear Fusion Reactors". While many of the ideas and studies reported in the first workshop remain valid, there has been substantial progress in the design and specification of many diagnostics for ITER. This motivated a second workshop on this topic and the publication of a new book of proceedings. ITER is a joint venture between Europe, Japan, Russia and USA in the field of controlled thermonuclear fusion research. The present aim of ITER is to design an experimental fusion reactor that can demonstrate ignition and sustained burn in a magnetically confined plasma. To achieve this goal, a wide range of plasma parameters will have to be measured reliably. It is also anticipated that diagnostics will be used much more extensively as input to control systems on ITER than on present fusion devices and this will require increased reliability and long-term stability.

Advances in Electrochemical Science and Engineering Oct 08 2020 This series, formerly edited by Heinz Gerischer and Charls V. Tobias, now edited by Richard C. Alkire and Dieter M. Kolb, has been warmly welcomed by scientists world-wide which is reflected in the reviews of the previous volumes: "This is an essential book for researchers in electrochemistry; it covers areas of both fundamental and practical importance, with reviews of high quality. The material is very well presented and the choice of topics reflects a balanced editorial policy that is welcomed." —The Analyst "All the contributions in this volume are well up to the standard of this excellent series and will be of great value to

electrochemists.... The editors again deserve to be congratulated on this fine collection of reviews." —Journal of Electroanalytical Chemistry and Interfacial Chemistry "...competently and clearly written." —Berichte der Bunsen- Gesellschaft für Physikalische Chemie

Subseafloor Biosphere Linked to Hydrothermal Systems Aug 25 2019 This book is the comprehensive volume of the TAIGA ("a great river" in Japanese) project. Supported by the Japanese government, the project examined the hypothesis that the subseafloor fluid advection system (subseafloor TAIGA) can be categorized into four types, TAIGAs of sulfur, hydrogen, carbon (methane), and iron, according to the most dominant reducing substance, and the chemolithoautotrophic bacteria/archaea that are inextricably associated with respective types of TAIGAs which are strongly affected by their geological background such as surrounding host rocks and tectonic settings. Sub-seafloor ecosystems are sustained by hydrothermal circulation or TAIGA that carry chemical energy to the chemosynthetic microbes living in an extreme environment. The results of the project have been summarized comprehensively in 50 chapters, and this book provides an overall introduction and relevant topics on the mid-ocean ridge system of the Indian Ocean and on the arc-backarc systems of the Southern Mariana Trough and Okinawa Trough.

Molecular Beam Epitaxy Nov 01 2022 This multi-contributor handbook discusses Molecular Beam Epitaxy (MBE), an epitaxial deposition technique which involves laying down layers of materials with atomic thicknesses on to substrates. It summarizes MBE research and application in epitaxial growth with close discussion and a 'how to' on processing molecular or atomic beams that occur on a surface of a heated crystalline substrate in a vacuum. MBE has expanded in importance over the past thirty years (in terms of unique authors, papers and conferences) from a pure research domain into commercial applications (prototype device structures and more at the advanced research stage). MBE is important because it enables new device phenomena and facilitates the production of multiple layered structures with extremely fine dimensional and compositional control. The techniques can be deployed wherever precise thin-film devices with enhanced and unique properties for computing, optics or photonics are required. This book covers the advances made by MBE both in research and mass production of electronic and optoelectronic devices. It includes new semiconductor materials, new device structures which are commercially available, and many more which are at the advanced research stage. Condenses fundamental science of MBE into a modern reference, speeding up literature review Discusses new materials, novel applications and new device structures, grounding current commercial applications with modern understanding in industry and research Coverage of MBE as mass production epitaxial technology enhances processing efficiency and throughput for semiconductor industry and nanostructured semiconductor materials research community

Report Mar 13 2021

Cycling the Camino de Santiago Jan 23 2022 The Camino de Santiago de Compostela (Camino Francés or Way of St James) is among the world's most famous pilgrimages: Christian pilgrims have travelled to the shrine of St James in Santiago, northern Spain, since the ninth century. This guide provides all the information you need to successfully cycle the Camino. The Camino Francés is the most popular variant of the Camino, linking St Jean-Pied-de-Port on the French-Spanish border with Santiago via Pamplona, Burgos and León. The guide presents the journey in 18 stages. Two versions of the route are described, the first (770km) based closely on the walkers' route and suitable for hybrid or mountain bikes; the second (798km) a 'road route' for road and touring cycles. It can be cycled in around 10-14 days and is very well provisioned. Clear route description and mapping are accompanied by notes on local points of interest, as well as background information on Spanish history and the history of the Camino. The practicalities are also thoroughly covered, including travel to and from the route, accommodation, facilities, kit and how to qualify for and obtain your Compostela (pilgrims' certificate). Whether you're seeking a spiritual journey, a physical challenge or just a holiday, the Camino promises an unforgettable experience - from the beautiful landscapes, historic towns and rich culture of northern Spain to the famed camaraderie with other wayfarers. Blending information with inspiration, this guide is an ideal companion to cycling this UNESCO-listed route.
