[Natural Hazards](#) Aug 29 2022 This special volume contains a

selection of papers that were presented as part of the Seventh International Symposium on Natural and Man-Made Hazards (HAZARDS-98), held in Chania, Crete Island, Greece, during May 1998. The Symposium attracted broad international interest because many cases of natural disaster events, such as earthquakes, tsunamis, storm surges, forest fires, etc., that occurred in several parts of the world during the 1990s were presented not only for their physics but also from the point of view of their impact on society and their environmental consequences. Among these cases are the 1997 Red River Valley flood in Canada and the large earthquake of 18 November 1997, in Zakynthos, Greece. In addition, the volume contains contributions that apply advanced statistical

methods and artificial intelligence techniques, such as GIS, and systems analysis to approach the description of physical processes, the discrimination of experimental data and the assessment and management of risk. Audience: This volume forms an excellent reference for scientists, students, engineers, the insurance industry, authorities specializing in public safety and natural hazards preparedness and mitigation plans.

Kissing the Enemy Jul 16 2021
Kissing the Enemy is testimony to the author's creative versatility. It is a book which abounds with a wealth of perceptively observed detail, obviously the product of real experience, which lends to the

book a poignant, sometimes quite gritty reality -- a dramatic immediacy, which is one of its key strengths. The characters, situations and dialogue are relayed in vivid and lively detail making each moment seem entirely authentic. As a result, the reader is effortlessly drawn into the fabric of this story, experiencing it as his or her own reality. The structure of the book is an accomplished device in itself, patiently built and sparingly meted out with an eye on the necessities of tension, pace, climax and anti-climax. The perspective from which *Kissing the Enemy* is written is unusual and as such the ideals expressed are particularly important.

[Antimicrobial Resistance and Infection Control](#) Jan 28 2020

Antimicrobial resistance (AMR) refers to the ability of a microbe to resist the effects of medication aimed to kill it. Antibiotic resistance is a form of AMR. Some microbes can be resistant to multiple antimicrobials. They are called multidrug resistant microbes. Resistant microbes are difficult to treat and require higher doses of antimicrobials or alternative medications. Resistance typically occurs through genetic mutation, natural resistance or by acquiring resistance from another species. Proper sanitation and hygiene maintenance can minimize the spread of infections. Another strategy for achieving this is using narrow-spectrum antibiotics over broad-spectrum antibiotics. The field of infection control addresses all factors related to the spread of infections within the healthcare setting. This book unravels the recent studies in antimicrobial resistance and infection control. It will provide interesting topics for research, which interested readers can take up. The extensive content herein provides the readers with a thorough understanding of the subject.

Critical Resistance Apr 12 2021
This book serves as both an introduction to the concept of resistance in poststructuralist thought and an original contribution to the continuing philosophical discussion of this topic. How can a body of thought that mistrusts universal principles explain the possibility of critical resistance? Without appeals to abstract norms, how can emancipatory resistance be distinguished from domination? Can there be a poststructuralist ethics? David Hoy explores these crucial questions through lucid readings of Nietzsche, Foucault, Bourdieu, Derrida, and others. He traces the genealogy of resistance from Nietzsche's break with the Cartesian concept of consciousness to Foucault's and Bourdieu's theories of how subjects are formed through embodied social practices. He also considers Levinas, Heidegger, and Derrida on the sources of ethical resistance. Finally, in light of current social theory from Judith Butler to Slavoj Zizek, he challenges "poststructuralism" as a category and suggests the term "post-critique" as a more accurate description of contemporary Continental philosophy. Hoy is a leading American scholar of poststructuralism. Critical Resistance is the only book in English that deals substantively with the topical concept of

Design and Aesthetics

Mar 31 2020 Annotation Design and Aesthetics: A Reader is a comprehensive student reader on design history and aesthetic theory. It includes contributions from many of the writers whose work has been foundational to these two fields, including classic articles by Raymond Williams and Roger Scruton, and newer articles which provide an overview of current concerns and debates. The role of design in the world today has aroused much controversy. The first half of this book deals with the main arguments which have emerged from contemporary analysis of its role in the communication process. Essays focus on the question of absolute aesthetic standards versus cultural relativism, and the role of objects in cultural and social life. The second part turns to particular areas of design history, ranging from architecture and pottery to the history of dress. These two main sectors are prefaced by contextualising introductions by Jerry Palmer and Mo Dodson.

May 02 2020 Cereal Grain Quality Jun 02 2020 Cereals range from human food and beverages to animal feeds and industrial products. It is human food and beverages which are the predominant uses covered in this book, since the nutritional quality of cereals for animal feed is described in other publications on animal nutrition, and industrial products are a relatively minor use of cereals. Cereals are the main components of human diets and are crucial to human survival. Three species, wheat,

rice and maize, account for the bulk of human food. Barley is the major raw material for beer production and ranks fourth in world production. Other species such as sorghum are regionally important. This book covers all the major cereal species: wheat, rice, maize, barley, sorghum, millet, oats, rye and triticale. Specific chapters have been devoted to a description of the major end-uses of each of the species and to definition of the qualities required for each of their end uses. The functional and nutritional quality of cereals determines their suitability for specific purposes and may limit the quality of the end product, influencing greatly the commercial value of grain. An understanding of the factors that determine grain quality is thus important in the maintenance of efficient and sustainable agricultural and food production. The biochemical constituents of the grain that determine quality have been described in chapters on proteins, carbohydrates and other components. An understanding of the relationships between grain composition and quality is important in selecting grain for specific uses.
