Patterns of Attachment Jul 28 2022 Ethological attachment theory is a landmark of 20th century social and behavioral sciences theory and research. This new paradigm for understanding primary relationships across the lifespan evolved from John Bowlby's critique of psychoanalytic drive theory and his own clinical observations, supplemented by his knowledge of fields as diverse as primate ethology, control systems theory, and cognitive psychology. By the time he had written the first volume of his classic Attachment and Loss trilogy, Mary D. Salter Ainsworth's naturalistic observations in Uganda and Baltimore, and her theoretical and descriptive insights about maternal care and the secure base phenomenon had become integral to attachment theory. Patterns of Attachment reports the methods and key results of Ainsworth's landmark Baltimore Longitudinal Study. Following upon her naturalistic home observations in Uganda, the Baltimore project yielded a wealth of enduring, benchmark results on the nature of the child's tie to its primary caregiver and the importance of early experience. It also addressed a wide range of conceptual and methodological issues common to many developmental and longitudinal projects, especially issues of age appropriate assessment, quantifying behavior, and comprehending individual differences. In addition, Ainsworth and her students broke new ground, clarifying and defining new concepts, demonstrating the value of the ethological methods and insights about behavior. Today, as we enter the fourth generation of attachment study, we have a rich and growing catalogue of behavioral and narrative approaches to measuring attachment from infancy to adulthood. Each of them has roots in the Strange Situation and the secure base concept presented in Patterns of Attachment. Its inclusion in the Psychology Press Classic Editions series reflects Patterns of Attachment's continuing significance and insures its availability to new generations of students, researchers, and clinicians.

Grading the Nation's Report Card Jan 10 2021 The National Assessment of Educational Progress (NAEP), known as the nation's report card, has chronicled students' academic achievement in America for over a quarter of a century. It has been a valued source of information about students' performance, providing the best available trend data on the academic achievement of elementary, middle, and secondary school students in key subject areas. NAEP's prominence and the important need for stable and accurate measures of academic achievement call for evaluation of the program and an analysis of the extent to which its results are reasonable, valid, and informative to the public. This volume of papers considers the use and application of NAEP. It provides technical background to the recently published book, Grading the Nation's Report Card: Evaluating NAEP and Transforming the Assessment of Educational Progress (NRC, 1999), with papers on four key topics: NAEP's assessment development, content validity, design and use, and more broadly, the design of education indicator systems.

New Patterns for Comparative Religion Jul 24 2019 The cross-cultural study of religion has always gone hand in hand with the worldview, sciences, or intellectual frameworks of the time. These frames, whether focused on psychology or politics, gender or colonialism, bring out perspectives for understanding religious behavior. Today one of our common civic worldviews is represented in the shift from scriptural to evolutionary history. This volume brings together in one place key essays by professor emeritus William Paden, showing a progression of steps he has taken in exploring bridgeworks between comparative religion and evolutionary models of religious behavior. One of the leading scholars in religious studies, Paden shows ways that religion can be contextualized as part of the natural world and thus seen as reflecting the ingrained sociality and world-making drive of the human species. Paden argues that although comparativism has been challenged as too culture-bound, too western, or too gendered, cross-over categories and concepts between religious traditions cannot be avoided. Arguing that there are recurrent patterns of human behavior common to our species and that thereby underlie all cultures, he proposes that the missing link in the Religion Evolution debate is comparative religion, a global, cross-cultural perspective on religious behaviours throughout time. Each article is contextualized within this overall trajectory of thought within Paden's work and the history of the discipline as a whole.

Patterns in the Dark Jun 26 2022 Everyone knows dragons have been extinct for over a thousand years. Everyone is wrong. At least one dragon remains, and military scientists from the Cofah Empire are experimenting with its blood, using the magical substance to power deadly new weapons that could be used to bring the world to its knees. That's a concern for Zirkander, Cas, and the rest of the Iskandians, but all Tolemek wants is to find his missing sister. The last time he saw her, their father had locked her in an asylum because of a mental illness with no cure. Now the military has taken her. What use the Cofah have for her, Tolemek can only guess, but he is certain she is in danger. He must save her before it's too late. But her fate is inexplicably tied to the dragon's, and he must find it to find her.
