Nature-based solutions in agriculture: The case and pathway for adoption Jan 20 2022 Food system demands have increased exponentially in recent decades and are estimated to continue growing as global populations increase and economic affluence expands. However, the very foundation of a productive system – healthy lands and soils and clean water supply – is already under immense pressure. In fact, by the most credible estimates, up to 52% of global agricultural lands are now moderately to severely degraded, with millions of hectares per year degrading to the point they are abandoned by the land manager. The loss of productive land, coupled with increased food demand, pushes agriculture to be the primary driver in 80% of native habitat loss. Agricultural irrigation is driving the majority of water scarcity issues in high-risk basins threatening food systems, community water supplies and ecosystem health. These pressures have resulted in the global agriculture sector driving more biodiversity loss, destruction of natural habitat, soil degradation and depletion of natural resources around the world than any other industry.

Collaborative Networks for a Sustainable World Sep 28 2022 Collaborative Networks for a Sustainable World Aiming to reach a sustainable world calls for a wider collaboration among multiple stakeholders from different origins, as the changes needed for sustainability exceed the capacity and capability of any individual actor. In recent years there has been a growing awareness both in the political sphere and in civil society including the business sectors, on the importance of sustainability. Therefore, this is an important and timely research issue, not only in terms of systems design but also as an effort to borrow and integrate contributions from different disciplines when designing and/or governing those systems. The discipline of collaborative networks especially, which has already emerged in many application sectors, shall play a key role in the implementation of effective sustainability strategies. PRO-VE 2010 focused on sharing knowledge and experiences as well as identifying directions for further research and development in this area. The conference - dressed models, infrastructures, support tools, and governance principles developed for collaborative networks, as important resources to support multi-stakeholder sustainable developments. Furthermore, the challenges of this theme open new research directions for CNs. PRO-VE 2010 held in St.

Operations Research and Health Care Policy Feb 21 2022 Operations research tools are ideally suited to providing solutions and insights for

the many problems health policy-maker's face. Indeed, a growing body of literature on health policy analysis, based on operations research methods, has emerged to address the problems mentioned above and several others. The research in this field is often multi-disciplinary, being conducted by teams that include not only operations researchers but also clinicians, economists and policy analysts. The research is also often very applied, focusing on a specific question driven by a decision-maker and many times yielding a tool to assist in future decisions. The goal of this volume was to bring together a group of papers by leading experts that could showcase the current state of the field of operations research applied to health-care policy. There are 18 chapters that illustrate the breadth of this field. The chapters use a variety of techniques, including classical operations research tools, such as optimization, queuing theory, and discrete event simulation, as well as statistics, epidemic models and decision-analytic models. The book spans the field and includes work that ranges from highly conceptual to highly applied. An example of the former is the chapter by Kimmel and Schackman on building policy models, and an example of the latter is the chapter by Coyle and colleagues on developing a Markov model for use by an organization in Ontario that makes recommendations about the funding of new drugs. The book also includes a mix of review chapters, such as the chapter by Hutton on public health response to influenza outbreaks, and original research, such as the paper by Blake and colleagues analyzing a decision by Canadian Blood Services to consolidate services. This volume could provide an excellent introduction to the field of operations research applied to health-care policy, and it could also serve as an introduction to new areas for researchers already familiar with the topic. The book is divided into six sections. The first section contains two chapters that describe several different applications of operations research in health policy and provide an excellent overview of the field. Sections 2 to 4 present policy models in three focused areas. Section 5 contains two chapters on conceptualizing and building policy models. The book concludes in Section 6 with two chapters describing work that was done with policy-makers and presenting insights gained from working directly with policy-makers.

Innovation Communities Mar 22 2022 Self-organising networks have become the dominant innovators of complex technologies and radical innovation. The growing need for co-operation to ensure innovation success calls for a broader understanding of what makes innovation projects successful and requires new concepts. The book introduces the new concept of "innovation communities", defining them as informal networks of like-minded individuals who act as innovation promoters or champions. These key figures come from various companies and organisations and will team up in a project-related fashion, jointly promoting a certain innovation, product or idea either on one or across different levels of an innovation system. The publication presents findings from surveys that demonstrate that networks of champions are a success factor in radical innovation. Five case studies of noteworthy innovation projects illustrate why the collaboration of champions can make innovation projects more successful. Furthermore, the book presents hands-on methods and includes best-practice cases and guidelines on how to develop innovation communities. This publication comprises empirical findings and practical experiences that are valuable for the following groups in particular: Entrepreneurs; Innovation, R&D, and network managers; Innovation and strategy consultants; Innovation and start-up intermediaries; Innovation researchers; Government officials and politicians responsible for R&D and innovation programmes and funding

[Solution-Focused Case Management](#) Sep 16 2021 "Blundo and Simon have successfully outlined how a solution-focused perspective can be a powerful tool for case managers. Their understanding and presentation is based upon practice scenarios that are real and applied...They clearly demonstrate the impact of 'thinking and language' and the importance of building a collaborative relationship with clients. Their work challenges the traditional theory-driven interventions that focus on problems and arrive at a diagnosis . They encourage a 'shift' to a co-

constructive partnership that requires a practitioner to respect that clients are 'experts of their own lives'...They provide a clear step-wise discussion of techniques and strategies that can be employed working with individuals and families in case management settings. This book is a must read." -Lawrence T. Force, PhD. LCSW-R Professor of Psychology, Mount Saint Mary College, Newburgh, NY From the Foreword

Solution-focused practice is a paradigm that stresses client abilities, strengths, and individual goals rather than disability. Written by a team of educator/practitioners noted for their expertise in solution-focused therapy, this "how-to" text for social work, counseling, and psychology students guides current and future case managers in learning this strengths-based, collaborative approach to case management. It discusses both the philosophical basis for solution-focused casework and demonstrates how it is ideally suited for the case management process. The book is based on teaching materials the authors have developed and used in their classes and workshops with undergraduate and graduate students and professionals. The text incorporates new research and theoretical developments in solution-focused therapy as well as actual practice scenarios demonstrating the process of building a collaborative relationship with individual clients and families. Replete with strategies and tools for practicing solution-focused case management, the text describes such essential skills as identifying goals, monitoring progress, working with other agencies, and transitioning out of treatment. It discusses issues related to ethical practice and presents strategies for self-care. Additionally, the book addresses diversity and social justice and their relationships to solution-focused practice. Student exercises help to reinforce knowledge. The text will assist case managers in a variety of settings—hospitals, nursing homes, rehabilitation facilities, community-based mental health agencies, schools, prisons, court systems, and shelters for the homeless and victims of domestic violence—to partner with their clients towards finding strengths-based and solution-focused approaches to resolving issues in a positive way. Key Features:

- Authored by noted experts in solution-focused education and practice
- Facilitates a reframing of casework and case management around client strengths and resources
- Provides specific case examples that allow readers to troubleshoot and apply solution-focused principles to practice
- Includes student exercises throughout the book

Action Research into Teaching English in Russia's Professional Context Aug 15 2021 This book is a result of the investigative attempts of linguistics professionals to identify and meet the challenges of developing communicative competence in future engineers, economists and other such specialists. The unifying feature of all the contributions brought together here is the active involvement of the authors in practical instruction of English for specific professional purposes at the tertiary (bachelors' and masters' programs) level in Russia. This volume covers a number of relevant areas in this field, including new developments in methodology, approaches to course and materials design, and the contribution of language theory to foreign language teaching in a professional context. The unique teaching approach advocated in this book denounces the traditional practice of transferring classical methodology of communicative-oriented teaching to language classes for students with a non-linguistic or non-teaching professional orientation. The underlying idea of this volume is that a change in professional context implies a change in language teaching methodology, including materials, techniques and target competences. The ideas and experiences analysed here will appeal to anyone interested in the current trends in foreign language teaching and learning and particularly to educationalists.

The Practice of Enterprise Modeling Dec 19 2021 Enterprise modeling (EM) has gained substantial popularity both in the academic community and among practitioners. A variety of EM methods, approaches, and tools are developed and offered on the market. In practice they are used for various purposes such as business strategy development, process restructuring, as well as business and IT architecture alignment and governance. PoEM 2008, the First IFIP WG 8.1 Working Conference on The Practice of Enterprise Modeling, took place in Stockholm, Sweden. It is the first conference aiming to establish a dedicated forum where the use of EM in practice is addressed by bringing together researchers, users, and practitioners. The goals of PoEM 2008 were to - develop a better understanding of the practice of EM, to contribute to improved EM practice, as well as to share knowledge and experiences. The theme of PoEM 2008 was EM in different application contexts, e. g. , software development, including agile development, as well as business development, governance, and change.

How Knowledge Workers Get Things Done Sep 23 2019 Highly predictable work is easy to support using traditional programming techniques, while unpredictable work cannot be accurately scripted in advance, and thus requires the involvement of the knowledge workers themselves. The core element of Adaptive Case Management (ACM) is the support for real-time decision-making by knowledge workers. How Knowledge Workers Get Things Done describes the work of managers, decision makers, executives, doctors, lawyers, campaign managers, emergency responders, strategist, and many others who have to think for a living. These are people who figure out what needs to be done, at the same

time that they do it, and there is a new approach to support this presents the logical starting point for understanding how to take advantage of ACM. Keith Swenson points out, "We are seeing a fundamental shift in our workforce, and in the ways they need to be managed. Not only are companies engaging their customers in new ways, but managers are engaging workers in similarly transformed ways." In award-winning case studies covering industries as diverse as law enforcement, transportation, insurance, banking, state services, and healthcare, you will find instructive examples for how to transform your own organization. This important book follows the ground-breaking ACM publications, *Taming the Unpredictable* and *Mastering the Unpredictable* and provides important papers by thought-leaders in this field, together with practical examples, detailed ACM case studies and product reviews.
