Geelong's Changing Landscape Jun 13 2021 Geelong's Changing Landscape offers an insightful investigation of the ecological history of the Geelong and Bellarine Peninsula region. Commencing with the penetrating perspectives of Wadawurrung Elders, chapters explore colonisation and post-World War II industrial development through to the present challenges surrounding the ongoing urbanisation of this region. Expert contributors provide thoughtful analysis of the ecological and cultural characteristics of the landscape, the impact of past actions, and options for ethical future management of the region. This book will be of value to scientists, engineers, land use planners, environmentalists and historians.

Social Policy and Citizenship Jul 14 2021 Taking nine European countries as case studies, the contributions to this volume analyze the ways that citizenship has changed in key areas such as social security, labor market policies and social services.

Kenya's Changing Landscape Sep 16 2021 Botanist Homer L. Shantz took photographs of the Kenyan landscape in the early 1920s as part of his effort to document the natural plant cover of Africa. He returned there with B. L. Turner in the late 1950s to repeat the photographs. In 1990, Raymond Turner traveled to Kenya under the auspices of the National Geographic Society in order to match the photographs made by Shantz and B.L. Turner and to show the changes that have occurred over the decades since Shantz's initial journey. Turner's comparative photos and research into the botanical record dramatically reflect the encroachment of woody plants in arid areas and the increasing human impact in more humid locales. Turner's discussions of the photographs and the conclusions he draws provide an important reference for ecologists, geographers, botanists, and other researchers attempting similar studies. By documenting vegetation change in a region broadly similar climatically to North America's subtropical deserts and grasslands but different in its wildlife and its human culture, the book shows that the endpoints of landscape status are similar despite the vastly different histories of these two regions of the world.

The Changing Landscape of Food Governance Aug 27 2022 As markets become more globalized, they have also become governed by an increasingly complex array of public and private regulation. This volume investigates the changing landscape of food governance. In so doing, the contributions to his volume provid

On the Road Again Dec 07 2020 In *On the Road Again*, William Wyckoff explores Montana's changing physical and cultural landscape by pairing photographs taken by state highway engineers in the 1920s and 1930s with photographs taken at the same sites today. The older photographs, preserved in the archives of the Montana Historical Society, were intended to document the expenditure of federal highway funds. Because it is nearly impossible to photograph a road without also photographing the landscape through which that road passes, these images contain a wealth of information about the state's environment during the early decades of the twentieth century. To highlight landscape changes -- and continuities -- over more than eighty years, Wyckoff chose fifty-eight documented locations and traveled to each to photograph the exact same view. The pairs of old and new photos and accompanying interpretive essays presented here tell a vivid story of physical, cultural, and economic change. Wyckoff has grouped his selections to cover a fairly even mix of views from the eastern and western parts of the state, including a wide assortment of land use settings and rural and urban landscapes. The photo pairs are organized in thirteen visual themes, such as forested areas, open spaces, and sacred spaces, which parallel landscape change across the entire American West. A close, thoughtful look at these photographs reveals how crops, fences, trees, and houses shape the everyday landscape, both in the first quarter of the twentieth century and in the present. The photographs offer an intimate view into Montana, into how Montana has changed in the past eighty years and how it may continue to change in the twenty-first century. This is a book that will captivate readers who have, or hope to have, a tie to the Montana countryside, whether as resident or visitor. Regional and agricultural historians, geographers and geologists, and rural and urban planners will all find it fascinating.

Mount St. Helens, a Changing Landscape Mar 10 2021 In this fascinating book you will see Mount St. Helens as viewed by 19th century painters and by photographers from the turn of the century to the present day.

Changing Landscapes of Singapore Dec 19 2021 Changing Landscapes of Singapore illuminates both the social and the physical terrains of modern Singapore. Geographers use the term landscape to refer to visible surfaces and to the spatial dimension of social relations. Landscapes arise from particular historical circumstances, and in turn help shape social arrangements and possible courses of future development. The authors describe how the settings inhabited by various social groups in Singapore affect life experiences, and explore the impact of broader regional and international forces on Singapore. Written for non-specialists, the volume reflects fresh perspectives from the scholarship of Singaporean academics. Their work is sensitive to historical and geographical trends in the region, and also engages with broader theoretical themes.

Changing Landscapes: An Ecological Perspective Oct 29 2022 Landscape Ecology is an emerging science of gaining momentum over the past few decades in the scientific as well as in the planning-management worlds. Although the field is rooted in biology and geography, the approaches to understanding the ecology of a landscape are highly diverse. This hybrid vigor provides power to the field. One can no longer view a local ecosystem or land use in isolation from global areas and time frames. The surrounding landscape mosaic and the flows and movements in a landscape must be considered, especially the linkage between humans requiring resources provided by nature, the constraints on their use as well as the responding landscape.

Sustainable Land Management in a European Context Oct 05 2020 This open access book presents and discusses current issues and innovative solution approaches for land management in a European context. Manifold sustainability issues are closely interconnected with land use practices. Throughout the world, we face increasing conflict over the use of land as well as competition for land. Drawing on experience in sustainable land management gained from seven years of the FONA programme (Research for Sustainable Development, conducted under the auspices of the German Federal Ministry of Education and Research), the book stresses and highlights co-design processes within the "co-creation of knowledge", involving collaboration in transdisciplinary research processes between academia and other stakeholders. The book begins with an overview of the current state of land use practices and the subsequent need to manage land resources more sustainably. New system solutions and governance approaches in sustainable land management are presented from a European perspective on land use. The volume also addresses how to use new modes of knowledge transfer between science and practice. New perspectives in sustainable land management and methods of combining knowledge and action are presented to a broad readership in land system sciences and environmental sciences, social sciences and geosciences.

Biogeology Jun 25 2022 This detailed exposition gives background and context to how modern biogeography has got to where it is now. For biogeographers and other researchers interested in biodiversity and the evolution of life on islands, Biogeology: Evolution in a Changing Landscape provides an overview of a large swathe of the globe encompassing Wallacea and the western Pacific. The book contains the full text of the original article explored in each chapter, presented as it appeared on publication. Key features: Holistic treatment, collecting together a series of important biogeographical papers into a single volume Authored by an expert who has spent nearly three decades actively involved in biogeography Describes and interprets a region of exceptional biodiversity and extreme endemism The only book to provide an integrated treatment of Wallacea, Melanesia, New Zealand, the New Zealand Subantarctic Islands and Antarctica Offers a critique of fashionable neo-dispersalist arguments, showing how these still suffer from the same weaknesses of the original Darwinian formulation. The chapters also include analysis of many major theoretical and philosophical issues of modern biogeographic theory, so that those interested in a more philosophical approach will find the book stimulating and thought-provoking.

Learners in a Changing Learning Landscape Feb 21 2022 This book is about questions. The fundamental process through which it was created is an extended and in-depth dialogue. That dialogue took place over a two-year period involving researchers, lifelong learners, educators, and thinkers. The publication of the dialogue in the form of this unique book addresses the authors' peer community: the learners, teachers, researchers and policymakers who will take the dialogue forward and contribute to its further growth.

Aging, Society, and the Life Course, Fourth Edition Apr 30 2020 Doody's Score: 91, 4 Stars "[This] book's unfading preoccupation with social context, social processes, and social structures distinguishes itself and greatly contributes to the discourse in gerontology."--The Gerontologist This is a comprehensive textbook for both undergraduate and graduate level courses, detailing the impact of societal forces on the aging process. The book focuses on the diversity of the older population, examining it from micro/macro perspectives in order to understand aging and the life course as social phenomena. This latest edition examines significant changes in the field of social gerontology, such as the paradigms of aging and the life course, the baby boomer cohorts as they approach retirement and later life, the growing interest in global aging, and civic engagement. This text encourages students to examine aging from personal, familial, community, societal and global perspectives, including both the positive and negative realities of aging. Key Features: Provides websites of interest at the end of each chapter Presents provocative essays on love, sex, music, medicine, and crime to further expand on chapter contents Provides review questions and key terms as study guides at the end of each chapter

Landscapes and Landforms of Scotland Dec 27 2019 This book provides an appealing and informative overview of the outstanding landforms and landscapes of Scotland. Scotland is internationally renowned for the diversity of its geology, landforms and landscapes. The rock record spans most of geological time, from the Archaean to the Palaeogene, and represents the outcome of tectonic plate movements, associated geological processes, and sea-level and climate changes. Scotland incorporates primeval gneiss landscapes, the deeply eroded roots of the Caledonian mountain chain, landscapes of extensional tectonics and rifting, and eroded remnants of volcanic complexes that were active when the North Atlantic Ocean opened during the Palaeogene. The present relief reflects uplift and deep weathering during the Cenozoic, strongly modified during successive episodes of Pleistocene glaciation. This striking geodiversity is captured in this book through 29 chapters devoted to the evolution of Scotland's scenery and locations of outstanding geomorphological significance, including ancient palaeosurfaces, landscapes of glacial erosion and deposition, evidence of postglacial landscape modification by landslides, rivers and wind, and coastal geomorphology. Dedicated chapters focus on Ice Age Scotland and the associated landscapes, which range from alpine-type mountains and areas of selective glacial erosion to ice-moulded and drift-covered lowlands, and incorporate accounts of internationally renowned sites such as the 'Parallel Roads' of Glen Roy, the Cairngorm Mountains and the inselbergs of Assynt. Other chapters consider the record of postglacial rock-slope failures, such as the famous landslides of Trotternish on Skye, and the record of fluvial changes since deglaciation. The sea-level history of Scotland is addressed in terms of its raised and submerged shorelines, while several chapters discuss the contrasting coastal landscapes, which range from the spectacular sea cliffs of Shetland and Orkney to the beaches and dunes of eastern Scotland. The role of geoconservation in preserving Scotland's outstanding geomorphological heritage is outlined in the final chapter. The book offers an up-to-date and richly illustrated reference guide for geomorphologists, other Earth scientists, geographers, conservationists, and all those interested in geology, physical geography, geomorphology, geotourism, geoheritage and environmental protection.

Design for the Changing Educational Landscape Aug 03 2020 The whole landscape of space use is undergoing a radical transformation. In the workplace a period of unprecedented change has created a mix of responses with one overriding outcome observable worldwide: the rise of distributed space. In the learning environment the social, political, economic and technological changes responsible for this shift have been further compounded by constantly developing theories of learning and teaching, and a wide acceptance of the importance of learning as the core of the community, resulting in the blending of all aspects of learning into one seamless experience. This book attempts to look at all the forces driving the provision and pedagogic performance of the many spaces, real and virtual, that now accommodate the experience of learning and provide pointers towards the creation and design of learning-centred communities. Part 1 looks at the entire learning universe as it now stands, tracks the way in which its constituent parts came to occupy their role, assesses how they have responded to a complex of drivers and gauges their success in dealing with renewed pressures to perform. It shows that what is required is innovation within the spaces and integration between them. Part 2 finds many examples of innovation in evidence across the world -- in schools, the higher and further education campus and in business and cultural spaces -- but an almost total absence of integration. Part 3 offers a model that redefines the learning landscape in terms of learning outcomes, mapping spatial requirements and activities into a detailed mechanism that will achieve the best outcome at the most appropriate scale. By encouraging stakeholders to creating an events-based rather than space-based identity, the book hopes to point the way to a fully-integrated learning landscape: a learning community.

Managing Landscapes for Change Feb 09 2021 This book discusses how future landscapes will be shaped by pervasive change and where, when, and how society should manage landscapes for change. Readers will learn about the major anthropogenic drivers of landscape change, including climate change and human induced disturbance regimes, and the unique consequences that multiple and simultaneously occurring change agents can have on landscapes. The author uses landscape trajectories as a guide to selecting the appropriate course of action, and considers how landscape position, inertia, and direction will determine landscape futures. The author introduces the concept of landscapes as socio-technical-ecological systems (STES), which combines ecological and technological influences on future landscape change and the need for society to acknowledge both when considering landscape management. Thinking beyond solutions, the author identifies barriers to managing landscapes for change including the cost, cultural identity of local populations, and the fear of taking action under uncertain conditions. Nevertheless, processes, tools, and technologies exist for overcoming social and ecological barriers to managing landscapes for change, and continued investment in social and scientific infrastructure holds out hope for maintaining our landscape values even as we enter an era of unprecedented change and disruption.

Arab Women and the Media in Changing Landscapes Nov 25 2019 This volume explores the dialogue between Arab media and global developments in the information age, looking at the influence of new technologies in Arab societies and the evolving role of Arab women in 'old' and 'new' media. By gathering together contributions from both Arab and non-Arab scholars alike, a timely and important collection is presented that sheds new light on the growing involvement, role and image of Arab women in the media.

Changing Landscapes of Singapore Jul 22 2019

Changing Landscapes Jan 28 2020

Electoral Politics in India Mar 30 2020

Guangdong and Chinese Diaspora Sep 04 2020 China's rapid economic growth has drawn attention to the Chinese diasporic communities and the multiple networks that link Chinese individuals and organizations throughout the world. Ethnic Chinese have done very well economically, and the role of the Chinese Diaspora in China's economic success has created a myth that their relations with China is natural and primordial, and that regardless of their base outside China and generation of migration, the Chinese Diaspora are inclined to participate enthusiastically in China's social and economic agendas. This book seeks to dispel such a myth. By focusing on Guangdong, the largest ancestral and native homeland, it argues that not all Chinese diasporic communities are the same in terms of mentality and orientation, and that their connections to the ancestral homeland vary from one community to another. Taking the two Cantonese-speaking localities of Panyu and Xinyi, Yow Cheun Hoe examines the hierarchy of power and politics of these two localities in terms of their diasporic kinsfolk in Singapore and Malaysia, in comparison with their counterparts in North America and Hong Kong. The book reveals that, particularly in China's reform era since 1978, the arguably primordial sentiment and kinship are less than crucial in determining the content and magnitude of linkages between China and the overseas Chinese. Rather, it suggests that since 1978 business calculation and economic rationale are some of the key motivating factors in determining the destination and degree of diasporic engagement. Examining various forms of Chinese diasporic engagement with China, this book will appeal to students and scholars of Chinese Diaspora, Chinese culture and society, Southeast Asian culture and society and ethnicity.

The Changing Landscape of a Utopia Aug 23 2019

The Changing Landscape of International Schooling May 24 2022 The number of English-medium international schools that deliver their curriculum wholly or partly in the English language reportedly reached 6,000 in January 2012. It is anticipated this number will rise to over 11,000 schools by 2022, employing over 500,000 English-speaking teachers. The number of children being taught in these schools reportedly reached 3 million in March 2012.

Alongside this phenomenal growth the landscape of international schooling has changed fundamentally, moving away from largely serving the children of the expat and globally mobile business community and Embassies, towards serving the 'local' children of the wealthy and emerging middle-class. This has been reflected in the shift away from non-profit ownership by the school community towards ownership by for-profit companies and proprietors. In this book, Tristan Bunnell explores the changing landscape of international schooling and discusses the implications of these changes, both in terms of theoretically conceptualizing the scale, nature and purpose of the field, and in terms of practically serving and administering the growing industry that international education is becoming. The Changing Landscape of International Schooling will be worthwhile reading for researchers, academics and students of international schooling, leaders and teachers in international schools, and those interested in the broader development of international education.

How Journalists Use Twitter Jun 01 2020 How Journalists Use Twitter: The Changing Landscape of U.S. Newsrooms shows how leading reporters and editors at four major metropolitan newspapers are embracing Twitter as a key tool in their daily routines and how the social media platform influences coverage. This book builds on social media research by analyzing newsroom work through the lens of four different communications theories—diffusion of innovation, boundary, social capital and agenda-setting theories. This book will be of interest to scholars of communication, journalism, and new media.

Scientific Scholarly Communication Jul 02 2020 This book critically examines the historical developments and current trends in the scientific scholarly communication system, issues and challenges in scientific scholarly publishing and scientific data sharing, implications and debates associated with the influence of intellectual property rights on scientific information sharing, and new trends related to peer reviewing and measuring the impact of scientific publications. Based on thorough examination of published literature, the book illustrates the involvement of many stakeholders—scientists, science educators, university administrators, government entities, research funders, and other interested parties—in this complex and dynamic system. The discussion highlights the roles these stakeholders have to play, individually and collaboratively, to help transform the future of the scientific scholarly communication system.

A Changing Landscape Feb 27 2020

The Changing Landscape of Work and Family in the American Middle Class Oct 17 2021 The Changing Landscape of Work and Family in the American Middle Class explores the dynamics of the modern American family and how they have adapted to the changing economy and culture. Contributors from a variety of disciplines redefine the concept of the "model American family" and provide well-researched insight into what the new standards for judging family life and its functionality will be.

Interpreting in a Changing Landscape Apr 23 2022 This book of selected papers from the Critical Link 6 conference addresses the impact of a rapidly changing reality on the theory and practice of community interpreting. The recent social, political and economic developments have led to phenomena of direct concern to the field, for example multilingualism in traditionally monolingual societies, the emergence of rare language pairs, or new language-related problems in immigration application procedures, social welfare institutions and prisons. Responding to the need for critical reflection as well as practical solutions, the papers in this volume approach the changing landscape of community interpreting in its diversity. They deal with political, social, cultural, institutional, ethical, technological, professional, and educational aspects of the field, and will thus appeal to academics, practitioners and policy-makers alike. Specifically, they explore topics such as interpreting roles, communication strategies, ethics vs. practice, interpreting vs. culture brokering, interpreting strategies in different interactional contexts, and interpreter training and education.

The Cradle of Humanity Apr 11 2021 POPULAR SCIENCE. Humans are rather weak when compared with many other animals. We are not particularly fast and have no natural weapons. Yet Homo sapiens currently number nearly 7.5 billion and are set to rise to nearly 10 billion by the middle of this century. We have influenced almost every part of the Earth system and as a consequence are changing the global environmental and evolutionary trajectory of the Earth. So how did we become the world's apex predator and take over the planet? Fundamental to our success is our intelligence, not only individually but more importantly collectively. But why did evolution favour the brainy ape? Given the calorific cost of running our large brains, not to mention the difficulties posed for childbirth, this bizarre adaptation must have given our ancestors a considerable advantage.

Thorps in a Changing Landscape Jan 08 2021 "The authors consider the siting of 'thorps' and 'throps' in relation to the landscape and to soil types in particular. Amply demonstrating the value of an interdisciplinary approach to the study of early medieval settlement in England, the authors are able to draw important conclusions about the changes in farming that swept the country during this period and by association the process of village nucleation. By examining both the chronology of place-names in 'thorp' and 'throp' and their qualifying elements (notably the presence or absence of personal names), it appears possible to chart both the speed at which arable enterprises farmed in severally converted to communal cultivation as well as the direction in which the changes spread. There is a sense of real excitement as many fresh insights are revealed in the course of the book" --P. [4] of cover.

Livestock in a Changing Landscape, Volume 1 Jul 26 2022 Livestock in a Changing Landscape is a collaborative effort by the United Nations Food and Agriculture Organization (FAO); International Livestock Research Institute (ILRI); FAO Livestock, Environment and Development Initiative (LEAD); Scientific Committee on Problems of the Environment (SCOPE); Swiss College of Agriculture (SHL), Bern University of Applied Sciences; French Agricultural Research Centre for International Development (CIRAD); and Woods Institute for the Environment at Stanford University.--COVER.

The Changing Landscape of Retirement - What You Don't Know Could Hurt You Sep 23 2019 There is tremendous frustration being voiced by baby boomers who thought they should be able to make an easy transition into retirement. Unfortunately, for many, things have not worked out exactly as they had planned. The landscape of retirement has changed so dramatically in the past ten years that it's time to address the mistakes being made. There are powerful new retirement strategies that can help put you back on track, but only if you know the proper questions to ask. This book was written to help those concerned about how to create a comfortable retirement for themselves and their families.

LGBTQ Culture Nov 06 2020 Recent decades have seen remarkable changes in the cultural visibility, legal status, and social acceptance of LGBTQ+ people, from positive representations of queerness in television series like *The L-Word* and *Will & Grace*, to films about queer intersectionality like *Moonlight*, to openly-gay and lesbian elected officials and leaders in the business community, to the end of anti-sodomy laws and marriage discrimination. With these advances have come assimilation of the queer subculture into the mainstream and, with it, loss of both some of the stigmatization of non-heteronormativity and the very cornerstones of the distinctiveness of LGBTQ+ communities, including queer neighbourhoods, bars and nightclubs, bookstores, publications, and other queer businesses. Queer couples and their children are migrating from LGBTQ+ enclaves to neighbourhoods with better schools, queer singles meet in virtual spaces rather than in bars, and LGBTQ+ bookstores and community centres, once the hub of queer communities, are closing, replaced by Amazon.com and social media. These changes raise the question of how LGBTQ+ culture is changing and whether, like many assimilated subcultures before it, it may be in fact endangered. This book examines these seismic changes, their sociological and cultural implications, reminisces about what has been lost and gained, and hints at what the future may hold for LGBTQ+ people. The chapters in this book were originally published in a special issue of the *Journal of Homosexuality*.

Landscapes and Geomorphology: A Very Short Introduction Sep 28 2022 What were the landscapes of the past like? What will landscapes look like in the future? Landscapes are all around us, but most of us know very little about how they have developed, what goes on in them, and how they react to changing climates, tectonics and human activities. Examining what landscape is, and how we use a range of ideas and techniques to study it, Andrew Goudie and Heather Viles demonstrate how geomorphologists have built on classic methods pioneered by some great 19th century scientists to examine our Earth. Using examples from around the world, including New Zealand, the Tibetan Plateau, and the deserts of the Middle East, they examine some of the key controls on landscape today such as tectonics and climate, as well as humans and the living world. They also discuss some key 'landscape detectives' from the past, including Charles Darwin who did some important, but often overlooked, research on landscape. Concluding with the cultural importance of landscape, and exploring how this has led to the conservation of much 'earth heritage', they delve into the future and look at how we can predict the response of landscapes to climate change in the future. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Earthquakes and Volcanoes Oct 25 2019 The Earth's landscape is changing all the time, both through natural processes & human activity. This series looks in detail at some of these changes. It describes what is happening to different landscapes around the world, & investigates the short & long-term consequences of this environmental transformation.

Thorps in a Changing Landscape Nov 18 2021 Considering the minor settlements of England's Danelaw--villages known as thorps or throps--this history demonstrates how place-name evidence can be used to understand early cultures. By integrating linguistic and archaeological approaches, it establishes a compelling connection between the creation of these place-names and the fundamental changes taking place in the English landscape between AD 850 and 1250. The integral role of thorps in revolutionizing agricultural practice at that time is thoroughly analyzed.

Changing Landscapes Mar 22 2022 While the funeral is one of mankind's oldest rituals, funeral practices are not exempt from adaptation and change. Today's families are instinctively seeking more environmentally responsible body care and disposition options, more hands-on participation in the funeral period, regardless of where they live or how much money they have to spend. The self-imposed policies and standard practices espoused by the funeral industry are being challenged on every level and for every reason by every generation, from aging Baby Boomers' quest for equality, affordability, and authenticity, right on down to Millennials' pragmatic, tech savvy entrepreneurial spirit. How are funeral professionals responding to the rapidly growing, persistent demand for green products and services? Will the industry be able to pivot and produce nimbly enough to save the profession from rising any higher on the endangered careers list? What does it mean to be an innovator in the field of green funeral service from the inside? And how can greenwashing be avoided? These writers provide a different glimpse into the world of funeral service than the standard mortuary fare. Many of them have devoted their lives to envisioning a more just, eco-responsible, and honorable way to care for our dead, while others are acting as the canaries in the coal mine, adopting green practices early and parenting them as they develop. All the thought leaders in this collection have one central theme in common: finding ways to honor our commitment to ethical and compassionate funeral practices that nourish the relationships between families and providers, the profession and the public, and human beings and the Earth.

Through a Changing Landscape Jan 20 2022 Taken over a span of several decades, 75 coloured photographs of Waterloo Region illustrate how setting or place can either foster the development of a sense of community, or hinder it.

The Gardens of Sallust May 12 2021 Pleasure gardens, or horti, offered elite citizens of ancient Rome a retreat from the noise and grime of the city, where they could take their leisure and even conduct business amid lovely landscaping, architecture, and sculpture. One of the most important and beautiful of these gardens was the horti Sallustiani, originally developed by the Roman historian Sallust at the end of the first century B.C. and later possessed and perfected by a series of Roman emperors. Though now irrevocably altered by two millennia of human history, the Gardens of Sallust endure as a memory of beauty and as a significant archaeological site, where fragments of sculpture and ruins of architecture are still being discovered. In this ambitious work, Kim Hartswick undertakes the first comprehensive history of the Gardens of Sallust from Roman times to the present, as well as its influence on generations of scholars, intellectuals, and archaeologists. He draws from an astonishing array of sources to reconstruct the original dimensions and appearance of the gardens and the changes they have undergone at specific points in history. Hartswick thoroughly discusses the architectural features of the garden and analyzes their remains. He also studies the sculptures excavated from the gardens and discusses the subjects and uses of many outstanding examples.

Biogeology Jun 20 2019 This detailed exposition gives background and context to how modern biogeography has got to where it is now. For biogeographers and other researchers interested in biodiversity and the evolution of life on islands, *Evolution on a Changing Landscape* provides an overview of a large swathe of the globe encompassing Wallacea and the western Pacific. The book contains the full text of the original article explored in each chapter, presented as it appeared on publication. Key features: Holistic treatment, collecting together a series of important biogeographical papers into a single volume Authored by an expert who has spent nearly three decades actively involved in biogeography Describes and interprets a region of exceptional biodiversity and extreme endemism The only book to provide an integrated treatment of Wallacea, Melanesia, New Zealand, the New Zealand Subantarctic Islands and Antarctica Offers a critique of fashionable neo-dispersalist arguments, showing how these still suffer from the same weaknesses of the original Darwinian formulation. The chapters also include analysis of many major theoretical and philosophical issues of modern biogeographic theory, so that those interested in a more philosophical approach will find the book stimulating and thought-provoking. .;it;P> The only book to provide an integrated treatment of Wallacea, Melanesia, New Zealand, the New Zealand Subantarctic Islands and Antarctica Offers a critique of fashionable neo-dispersalist arguments, showing how these still suffer from the same weaknesses of the original Darwinian formulation.
