The Athenian Decadrachm Aug 21 2021 This book represents a huge advance on the previous study of the material, Chester Starr's Athenian Coinage, 480-449 B.C. (Oxford, 1970). Fischer Bossert has collected more than three times as many specimens as were known to Starr, and has provided a full account of the known forgeries drawn from the photo-files of major dealers, scholars and Museums. This is an indispensable work for all interested in the coinage and history 5th-Century B.C. Athens. Bismaya Aug 09 2020 "The results of the Bismaya excavations were never properly published, and most of the material was never published at all. Banks wrote a lively and highly readable popular account, Bismya, or the Lost City of Adab, that appeared in 1912 and gave the impression that his field methods were considerably less than satisfactory. However, that was not the case. Banks kept a careful field diary, complete with highly accurate sketches, and sent detailed weekly reports, lavishly illustrated with his own drawings, back to Chicago. These materials show that he excavated a mid-third-millennium BC temple and discovered some of the world's first historical inscriptions incised on stone vessels dedicated in that structure. He also uncovered residences of the late Early Dynastic period, two Akkadian

administrative centers, and a palace of the Isin Larsa/Old Babylonian period."--publisher website.

General Relativity and Gravitation Mar 16 2021 The Tenth International Conference on General Relativity and Gravitation (GR10) was held from July 3 to July 8, 1983, in Padova, Italy. These Conferences take place every three years, under the auspices of the International Society on General Relativity and Gravitation, with the purpose of assessing the current research in the field, critically discussing the progress made and disclosing the points of paramount importance which deserve further investigations.

The Conference was attended by about 750 scientists active in the various subfields in which the current research on gravitation and general relativity is articulated, and more than 450 communications were submitted. In order to fully exploit this great occurrence of experience and creative capacity, and to promote individual contributions to the collective knowledge, the Conference was given a structure of workshops on the most active topics and of general sessions in which the Conference was addressed by invited speakers on general reviews or recent major advancements of the field. The individual communications were collected in a two-volume publication made available to the participants upon their arrival and widely distributed to Scientific Institutions and Research Centres.

story of a game so great, even the Cold War couldn't stop it Tetris is perhaps the most instantly recognizable, popular video game ever made. But how did an obscure Soviet programmer, working on frail, antiquated computers, create a product which has now earned nearly 1 billion in sales? How did a makeshift game turn into a worldwide sensation, which has been displayed at the Museum of Modern Art, inspired a big-budget sci-fi movie, and been played in outer space? A quiet but brilliant young man, Alexey Pajitnov had long nurtured a love for the obscure puzzle game pentominoes, and became obsessed with turning it into a computer game. Little did he know that the project that he labored on alone, hour after hour, would soon become the most addictive game ever made. In this fast-paced business story, reporter Dan Ackerman reveals how Tetris became one of the world's first viral hits, passed from player to player, eventually breaking through the Iron Curtain into the West. The Tetris Effect is an homage to both creator and creation, and a must-read for anyone who's ever played the game—which is to say everyone.

The Theory of Complex Angular Momenta

Apr 16 2021 This 2003 book provides a rigorous introduction to the theory of complex angular momenta, based on the methods of field theory. It comprises an English translation of the series of lectures given by V. N. Gribov in 1969, when the physics of high-energy hadron interactions was being created. Besides their historical significance, these lectures contain material which is highly relevant to research today. The basic physical results and the approaches Gribov developed are now being rediscovered in an alternative context: in the microscopic theory of

hadrons provided by quantum chromodynamics. The ideas and calculation techniques presented in this book are useful for analysing high-energy hadron scattering phenomena, deep inelastic lepton-hadron scattering, the physics of heavy ion collisions, kinetic phenomena in phase transitions, and will be instrumental in the analysis of electroweak processes at the next-generation particle accelerators, such as LHC and TESLA.

places, methods and ideas) within the traditions of correspondence courses, commercial television, adult education, the post-war social democratic settlement and the Cold War. A critical assessment of its engagement with teaching, assessment and support for adult learners offers an understanding as to how it came to dominate the market for part-time studies. It also indicates how, as the funding and status of higher education shifted, it became a loved brand and a model for universities around the world. Drawing on previously ignored or unavailable records, personal testimony and recently digitised broadcast teaching materials, it recognises the importance of students to the maintenance of the university and places the development of learning and the uses of technology for education over the course of half a century within a wider social and economic perspective.
