[Non-Timber Forest Products](#) Sep 29 2022

Forests cover thirty-one percent of the world's land surface, provide habitats for animals, livelihoods for humans, and generate household income in rural areas of developing countries. They also supply other essential amenities, for instance, they filter water, control water runoff, protect soil erosion, regulate climate, store nutrients, and facilitate countless non-timber forest products (NTFPs). The main NTFPs comprise herbs, grasses, climbers, shrubs, and trees used for food, fodder, fuel, beverages, medicine, animals, birds and fish for food, fur, and feathers, as well as their products, like honey, lac, silk, and paper. At present, these products play an important role in the daily life and well-being of millions of people worldwide. Hence the forest and its products are very valuable and often NTFPs are considered as the 'potential pillars of sustainable forestry'. NTFPs items like food, herbal drugs, forage, fuel-wood, fountain, fibre, bamboo, rattans, leaves, barks, resins, and gums have been continuously used and exploited by humans. Wild edible foods are rich in terms of vitamins, protein, fat, sugars, and minerals. Additionally, some NTFPs are used as important raw materials for pharmaceutical industries. Numerous industry-based NTFPs are now being exported in considerable quantities by developing countries. Accordingly, this sector facilitates employment opportunities in remote rural areas. So, these developments also highlight the role of NTFPs in poverty alleviation in different regions of the world. This book provides a wide spectrum of information on NTFPs, including important references. We hope that the compendium of chapters in this book will be very useful as a reference book for graduate and postgraduate students and researchers in various disciplines of forestry, botany, medical botany, economic botany, ecology, agroforestry, and biology. Additionally, this book should be useful for scientists, experts, and consultants associated with the forestry sector.

*Beyond Timber: Certification and Management of Non-timber Forest Products* Feb 20 2022 A focus on forest management standards. NTFPs within the forest management certification framework: challenges and recommendations. Accessibility and applicability of NTFP certification. A Country case study: NTFP certification in Brazil. Opportunities and challenges of NTFP certification. Social opportunities and challenges. Market and economic opportunities and challenges. Legal and institutional opportunities and challenges. Broader applications for standards and certification. Collaboration and Harmonization: the way forward?.

[Poverty Reduction Through Non-Timber Forest Products](#) Jan 22 2022 This book narrates personal stories of people from around the world who have used natural products, in particular Non Timber Forest Products (NTFPs) as a means to come out of poverty. Ending poverty remains a major worldwide challenge and is the number one goal under the UN Sustainable Development Goals. The book fills an important knowledge gap; that of personal stories of NTFP users. This has not been part of past publications on NTFPs which tend to focus on statistics and analysis of numbers, thus, the human faces of NTFP users are missing. Narrative stories provide a wealth of data about people and their experiences rather than

aggregated classifications, categories and characteristics of poverty. The objective of this book is to illustrate the poverty alleviation potential of NTFPs through documenting the personal life stories of individuals and households that lifted themselves out of poverty through trade of NTFPs. This book is for all who are interested in poverty alleviation and NTFPs.

**Ecological Sustainability for Non-Timber Forest Products** Oct 07 2020 There is growing knowledge about and appreciation of the importance of Non-timber Forest Products (NTFPs) to rural livelihoods in developing countries, and to a lesser extent, developed countries. However, there is also an assumption on the part of policy-makers that any harvesting of wild animal or plant products from the forests and other natural and modified ecosystems must be detrimental to the long-term viability of target populations and species. This book challenges this idea and shows that while examples of such negative impacts certainly exist, there are also many examples of sustainable harvesting systems for NTFPs. The chapters review and present coherent and scientifically sound information and case studies on the ecologically sustainable use of NTFPs. They also outline a general interdisciplinary approach for assessing the sustainability of NTFP harvesting systems at different scales. A wide range of case studies is included from Africa, Asia and South America, using plant and animal products for food, crafts, textiles, medicines and cosmetics.

### **Assessment Methods for Non-timber Forest Products in Off-reserve Forests** Feb 29 2020

This study was conducted with the objectives to develop assessment method for selected non-timber forest products (NTFPs) in off-reserve areas of the Goaso forest district, Ghana. In this frame the relative efficiency of adaptive cluster sampling method for inventorying selected NTFPs was investigated. The study also inventoried the selected species, explored their potential for income generation and sought how factors like accessibility influence their spatial distribution and abundance. Literature on the significance of NTFPs to local people echoed the need for the inclusion of NTFPs in forest management. The different methods of assessing NTFPs were reviewed to establish that methods for timber inventory which were inefficient for NTFPs have been adapted for NTFP inventory and thus the need for methods which would be more efficient for NTFPs. Adaptive cluster sampling method which has been suggested to be efficient for clumped and rare species was developed and tested.

Community and market survey was conducted first to select important NTFPs obtainable in off-reserves of the study area. The importance here was based on the use of the NTFP for subsistence and/or income generation. Six communities in the study area were randomly selected and a random number of households in each community were interviewed. Two main markets in the study area were also visited to obtain an overview of NTFPs used for income generation. The survey sought to include local knowledge on ecology, harvesting techniques and history of abundance of the selected species in the inventory design. Through the results obtained the species were grouped into two, based on their distribution. Three species, Calamus deeratus, bamboo, and raphia palms were mainly found to be distributed in patches around streams and rivers and tree species or shrubs scattered across the mosaic off-reserve cover types. A pilot inventory was conducted and the results factored into the design of the main inventory. Adapti.

*Sustainable Management of Non-Timber Forest Products. The Role of a Market Price*

*Information System* Dec 21 2021 Doctoral Thesis / Dissertation from the year 2019 in the subject Forestry / Forestry Economics, , language: English, abstract: The study aims to identify the role of market price information system in distribution of non-timber forest products (NTFPs) among the usufructs and sustainable management of NTFPs in long run. Information of market and price of NTFPs is important for usufructs to protect the forest and timely cultivate and harvest the non-timber forest product. The study has explored the knowledge and accessibility of usufructs on MPIS of NTFPs, current practice of MPIS, effectiveness of MPIS and challenges and opportunity of equitable distribution of NTFPs among usufructs. The study was based on the cross-sectional descriptive and exploratory research design. Data was collected from 466 respondents of Dolpa, Salyan and Banke districts of Nepal. Mixed method was adopted to collect the data. Simple random sampling

technique was used to select the respondents. Structured questionnaire survey and semi-structured interviews were done to collect the quantitative and qualitative data. Statistical models like cross-tabulation, Chi-Square test and ANOVA were used for data analysis. [Non-Timber Forest Products \(Ntfps\) and Domestication](#) Oct 26 2019 The book Non-timber Forest Products (NTFPs) and Domestication provides an insight into the potentiality of cultivation of NTFPs in cultivated land in place of agro-crops. Based on a structured questionnaire survey and some secondary documents this book has sought to explore the perception of smallholder farmers whether or not the NTFPs could be an alternative to existing agro-crops. The book deals with constraints and opportunities, market opportunities and risks with regards to promotion (domestication) of NTFPs in the cultivated land. The book also throws light on whether or not the existing policies are favourable to NTFPs domestication at farm level. Findings suggest that farmers are very much willing to cultivate NTFPs in their farmland in place of agro-crops. They perceive NTFPs more profitable and environmentally desirable than agro-crops since NTFPs requires less input than agro-crops. But farmers are reluctant to adopt domestication extensively because of market risks and Lack of direct access of farmers to the big trading companies is another constraint posed to expensive cultivation of NTFPs in the farm land.

### **MINOR FOREST PRODUCTS OF INDIA** Sep 25 2019

*Tropical Forestry Handbook* May 02 2020 This book provides a cross-section of all outstanding experience in all fields of tropical forestry under a drastically changing environment induced by climate change. It sheds light on the existing know-how and presents it in a concise and efficient way for the scientist and professional in charge of planning, implementing and evaluating forest resources. The Tropical Forestry Handbook provides proven and/or promising alternative concepts which can be applied to solve organizational, administrative and technical challenges prevailing in the tropics. Presented are state of the art methods in all fields concerning tropical forestry. Emphasize is given to methods which are adapted to- and which safeguard - environmental conditions.

*Commercialisation of Non-timber Forest Products: Review and Analysis of Research* Oct 19 2021 This study is one in a series of activities undertaken by CIFOR to reach a better understanding of the impact of commercialisation on forest resources and what factors influence the market demand for forest products. For example, two international workshops were organized by CIFOR in 1995 and another the following year to analyse key research issues in the field of NTFP development. These workshops recognised that the process of NTFP commercialisation interacts with people's welfare, forest management, tenure and control of resources, and forest structure and function (through ecological processes). Earlier review and analysis had generated a number of hypotheses, theories and conclusions related to the effects of commercialisation. Forest and resource tenure are likely to both affect the

way a resource is managed and utilised, and be affected by changes in value due to commercialisation. Many authors have suggested that NTFP harvesting will be less damaging to biodiversity and other environmental values than management for timber. Others suggest that market pressures are likely to lead to the decline and eventual disappearance of valuable products and to severe impacts on the ecosystem. While there is a growing understanding (and acceptance) of the economic importance of forest products, especially for the poor, the potential impact of NTFP commercialisation needs to be better understood. A recommendation from the workshops was to undertake a thorough overview of the available literature to synthesise the key lessons about these areas of interaction. Such a review would critically examine the available information and analyses and identify key research areas needing further attention.

### **Non-Timber Forest Products in the Global Context** Jun 26 2022

This book provides a comprehensive, global synthesis of current knowledge on the potential and challenges associated with the multiple roles, use, management and marketing of non-timber forest products (NTFPs). There has been considerable research and policy effort surrounding NTFPs over the last two and half decades. The book explores the evolution of sentiments regarding the potential of NTFPs in promoting options for sustainable multi-purpose forest management, income generation and poverty alleviation. Based on a critical analysis of the debates and discourses it employs a systematic approach to present a balanced and realistic perspective on the benefits and challenges associated with NTFP use and management within local livelihoods and landscapes, supported with case examples from both the southern and northern hemispheres. This book covers the social, economic and ecological dimensions of NTFPs and closes with an examination of future prospects and research directions.

### **Non-timber Forest Products** Nov 07 2020

Based on information derived from literature, statistics, interviews and a field survey in Bolivia, this report explores the value of non-timber forest products not only in economic terms but also as an important element in the lives of people who live in or near the forest. Covers values at local, national and international level; intellectual property rights; ecotourism; and sustainability of exploitation with detailed examples.

### **Managing Non-timber Forest Products (NTFPs) as an Economic Resource** Aug 17 2021

*The bioeconomy and non-timber forest products* Mar 24 2022 This book provides the first in-depth investigation of how non-timber forest products are an integral part of local, national, and global bioeconomies. While the plants and fungi that produce non-timber forest products are essential to the sustainability of forest ecosystems, peoples' food and livelihood security and sovereignty, and thus the bioeconomy, are often absent from bioeconomic strategies. Presenting a selection of empirical cases from around the world that engage with the bioeconomy and non-timber forest products, this volume reveals how essential

Access Free [oldredlist.iucnredlist.org](#) on December 1, 2022 Free Download Pdf

these products are to creating a greener and more sustainable future, how to better integrate them into efforts to transition to and expand the bioeconomy, and how such efforts can be supported and developed. Chapters analyse how and to what degree non-timber forest products promote sustainable resource use, generate employment, and contribute to food and livelihood security and poverty alleviation. The volume develops approaches and identifies interventions and policies to support the integration of non-timber forest products into bioeconomy strategies, including in national reporting schemes to provide recommendations for future research and practical implementation. This book will be of great interest to students and scholars of forest and natural resource management, bioeconomics, circular economy and ecological economics more widely. It will also be of interest to professionals working in sustainable development and the forestry sector.

Minor Forest Products of India Dec 29 2019

The book is the first of its kind to cover comprehensive treasure of information on a wide variety of forest products i.e. medicinal plants, essential oils, spices, condiments and savoury plants, edible oil plants, gums, resins and oleoresins, fatty oils, tanning materials, natural organic colouring materials, katha and cutch, oxalic acid, fibres and flosses, beverages and narcotics, fodder and forage plants, saponins, fish poisons, insecticides and raticides, green manure, beads, rubber plants, plants useful for paper, basket and wicker work including canes, beedi leaves, misc. plants and animal products. Besides dealing with general importance, occurrence, extraction, processing, storage and uses of the products, group-wise, the book gives a list in alphabetical order of the more important product yielding plants with their botanical, English and local names, their rough distribution in the country, their agro-silvicultural practices, exploitation, processing and utilisation of more important species under each group. The book is profoundly illustrated with coloured images. This book is useful to:

Non-Timber Forest Products for the

Development of Rural Community Apr 12 2021

NON TIMBER FOREST PRODUCT's (NTFPs) include all biological materials and services other than timber which are extracted from forest for human benefits. Pakistan is a developing country where natural resources such as NTFP's have direct and indirect contribution to the rural and national economy. The book undergoes comprehensive inquiry to probe the extent to which the NTFP's have impact on health, education, income, rural and cultural event of the rural community of district SWAT, Khyber Pakhtunkhwa, PAKISTAN. The potential for sustainable livelihood development in the region is assessed by analysing the forest dweller's livelihood assets, productive activities and perceptions of the forest livelihood. Moreover, this study explores the working and efficiency of the Forest Department and local indigenous organizations, mechanisms for

access to and use of forest resources and prerequisites for the success of local organizations as managers and defenders of the forest.

Non-Timber Forest Products in the Global Context Oct 31 2022 This book provides a comprehensive, global synthesis of current knowledge on the potential and challenges associated with the multiple roles, use, management and marketing of non-timber forest products (NTFPs). There has been considerable research and policy effort surrounding NTFPs over the last two and half decades. The book explores the evolution of sentiments regarding the potential of NTFPs in promoting options for sustainable multi-purpose forest management, income generation and poverty alleviation. Based on a critical analysis of the debates and discourses it employs a systematic approach to present a balanced and realistic perspective on the benefits and challenges associated with NTFP use and management within local livelihoods and landscapes, supported with case examples from both the southern and northern hemispheres. This book covers the social, economic and ecological dimensions of NTFPs and closes with an examination of future prospects and research directions.

Going Nuts for the Rainforest Jul 04 2020 The market oriented systematic harvest of non-timber forest products is reputed to be a potentially significant element in strategies for rainforest conservation which also contribute to improvement of the living conditions of the local population. This s

Tapping the Green Market Nov 19 2021

There is a rapidly growing interest in, and demand for, non-timber forest products (NTFPs). They provide critical resources across the globe fulfilling nutritional, medicinal, financial and cultural needs. However, they have been largely overlooked in mainstream conservation and forestry politics. This volume explains the use and importance of certification and eco-labelling for guaranteeing best management practices of non-timber forest products in the field. Using extensive case studies and global profiles of non-timber forest products, this work not only seeks to further our comprehension of certification processes but also broaden understanding of non-timber forest product management, harvesting and marketing. It should be useful to forest managers, policy-makers and conservation organizations as well as for academics in these areas.

Ecological Sustainability for Non-timber

Forest Products Aug 29 2022 There is growing knowledge about and appreciation of the importance of Non-timber Forest Products (NTFPs) to rural livelihoods in developing countries, and to a lesser extent, developed countries. However, there is also an assumption on the part of policy-makers that any harvesting of wild animal or plant products from the forests and other natural and modified ecosystems must be detrimental to the long-term viability of target populations and species. This book challenges this idea and shows that while examples of such negative impacts certainly exist, there are also many examples of sustainable harvesting systems for NTFPs. The chapters review and present coherent and scientifically sound information and case

studies on the ecologically sustainable use of NTFPs. They also outline a general interdisciplinary approach for assessing the sustainability of NTFP harvesting systems at different scales. A wide range of case studies is included from Africa, Asia and South America, using plant and animal products for food, crafts, textiles, medicines and cosmetics.

A Guide to Selected Non-timber Forest Products of the Hayfork Adaptive Management Area, Shasta-Trinity and Six-Rivers National Forests, California Jul 24 2019

Wild Product Governance Jul 28 2022 First Published in 2012. Routledge is an imprint of Taylor & Francis, an informa company.

Society and Non-timber Forest Products in Tropical Asia Jun 14 2021

Guide for small and medium enterprises in the sustainable non-timber forest product trade in Central Africa Jan 10 2021 This

guide sets out the main issues and significant challenges, and suggests solutions and guidelines for viable NTFP-based SMFEs. Government, nongovernmental agencies and their business partners have important roles to play in developing this sector from its vibrant, but largely informal status. This can be achieved by creating a more enabling, consistent and credible business and forest management framework of support, regulation and policy, that offers more and better opportunities to all those involved in getting a product from the forest to consumers.

Enhancing food security and poverty reduction in Ghana through non-timber forest products farming: Case study of Sefwi Wiawso District Nov 27 2019 Project

Report from the year 2008 in the subject Forestry / Forestry Economics, , course: Human Ecology, 38 entries in the bibliography, language: English, abstract: Food insecurity and poverty are the greatest global challenges facing the world today. Their redress is an indispensable requirement for sustainable development in developing countries, particularly in Africa. Poverty continues to be pervasive, intractable and inexcusable in the developing world particularly Sub-Saharan Africa. Extreme poverty ravages the lives of one in every four in the developing world (i.e. 1.2 billion people). The farming of non-timber forest products (NTFPs) is being promoted as a potential solution to the current high rates of malnutrition and poor health of the rural population, the degradation of tropical forests and the spread and intensification of poverty. However, the role of NTFPs in rural development in Ghana remains largely undervalued and understudied. This paper examines the contribution of NTFPs farming in enhancing poverty reduction, food security, sustainable forest management, and livelihoods improvement in the Sefwi Wiawso District (SWD) of the Western Region of Ghana. An exhaustive literature review and analysis of field data collected through administration of questionnaires, interviews and stakeholder consultations indicate that NTFPs are an important tool for addressing poverty amongst marginalised, forest-dependant communities in Ghana. 86% of farmers in SWD depend on NTFPs for income, food and medicine. The results of the study support the call on decision

Access Free [oldredlist.iucnredlist.org](http://oldredlist.iucnredlist.org) on December 1, 2022

makers and development actors to put NTFPs management on national, regional and district development agendas.

Non-timber Forest Products, Trade Policies and the Conservation of Forest Resources in South Sulawesi Feb 08 2021

### **Non-timber Forest Products and Food**

**Security** Mar 31 2020 Livelihoods of the rural people of Ethiopia depend on agriculture. However, erratic nature of rain and prevalence of drought in the country make agricultural production a challenge. To counter this problem, use of the available forest resource for non-timber forest products production is the most promising option. Nevertheless, no systematic and rigorous analysis on contribution of the product to income and food security to households was made. This study, therefore, was conducted in the Yabello Woreda of Borana Zone, with the objectives of identifying determinants of household food security in the study area, to assess contribution of non-timber forest products to household food security, and to analyze the challenges in getting contribution from non-timber forest products to the rural household food security. The required data set for the study were gathered primarily through survey method from 160 randomly selected sample households both from non-timber forest

products participants and non-participants (80 each). A purposive sampling procedure was used to select 2 PAs. Structured interview was used as data collection method. Supplementary, secondary data were collected from vari  
*Non Timber Forest Products* Aug 24 2019 This survey of Non Timber Forest Products (NTFPs) throughout the state of Gujarat, India, aims to set availability, production, consumption, management, marketing and policy in the context of social and economic development of tribal communities. This book is not intended to be a manual of practice, rather, it is a comprehensible introduction to NTFPs' status in Gujarat. This book will also be useful to practitioners perhaps coming to the contribution of NTFPs to the forest revenue, production status etc.

Commercialization of Non-timber Forest Products Aug 05 2020

*Non-Timber Forest Products* May 26 2022 Balance the culture of wildcrafting with the demands of sustainable forest management! This comprehensive book addresses the issues that arise when the primeval practice of gathering wild plants, fungi, leaves, and bark occurs in a post-industrial world. *Non-Timber Forest Products: Medicinal Herbs, Fungi, Edible Fruits and Nuts, and Other Natural Products from the Forest* provides a unique

analysis of the laws, sociocultural factors, competing political and economic interests, and environmental issues related to wildcrafting. The implications of harvesting non-timber forest products (NTFPs) are usually considered in the context of the Third World, but this unique book offers an analysis of current conditions in North America. *Non-Timber Forest Products* focuses on the forests of the Pacific Northwest and Upper Midwest. These areas offer a diverse array of commercially valuable forest products and fiercely contentious debates about environmental, sociocultural, and legal issues. *Non-Timber Forest Products* documents the core issues of this complex topic, including: the special rights of indigenous peoples consequences of increased demand for harvested products stewardship of public and private forests economic and public policy concerns review of historical and contemporary wildcrafting current research on economically useful forest products sustainable development strategies sociopolitical and environmental considerations for NTFP management *Non-Timber Forest Products* offers a clear picture of the historical, social, ecological, and policy aspects of NTFP use. It is an essential resource for private and public forest managers, environmental activists, economists, policymakers, and wildcrafters.
