The Bark Canoes and Skin Boats of Northern Eurasia May 05 2020 The Bark Canoes and Skin Boats of Northern Eurasia is a history and description of bark and skin boat traditions of the native peoples of Scandinavia and northern Russia. The history of northern peoples and cultures is inextricably linked to the technology of water transport. This is particularly true in northern Eurasia, where lakes and rivers can connect when overland summer travel is restricted by thick forests or bogs. For thousands of years, native peoples used a variety of bark and skin boats for fishing, hunting, trading, making war, and migrating. The Eurasian peoples, responding to their geography, climate, and environment, learned to construct--and perfect--small watercraft made from dug-out logs or the bark of birch, aspen, larch, and other trees, each variety crafted for its special use and environment. The text describes the design, construction, and uses of skin and bark boats for thirty-five traditional cultures ranging from northern Scandinavia to the Russian Far East, from the Bering Strait to northern China, and from South Siberia to the Arctic Ocean. Regional chapters use evidence from archaeology, historical illustrations and maps, and extensive documentation from ethnography and historical literature to reveal how differences in cultural traditions, historical relationships, climate, and geography have influenced the development and spread of watercraft before the introduction of modern planked boats. This definitive volume is richly illustrated with historical photographs and drawings, first-person explorer accounts from the 16th-19th centuries, and information on traditional bark and skin preparation, wood-bending, and other construction techniques. The Bark Canoes and Skin Boats of Northern Eurasia presents a first-ever overview of northern Eurasian boating traditions and serves as the companion to Charles Adney's and Howard Chapelle's classic, The Bark Canoes and Skin Boats of North America (1964).

The Nature of Boats Apr 27 2022 Boat noodling. Boat lovers suffer universally from this benign affliction. In its mildest form, boat noodling is nothing more than wondering why that sloop in the next slip is faster than yours. In a more significant manifestation it could mean serious daydreaming--drifting off for extended periods, sketching design ideas on the back of an envelope. Chances are, if you've picked up this book just to see what's in it, you're beyond help. Naval architect Dave Gerr offers the perfect antidote, a browser's reference to understanding how boats tick: all you've ever wanted to know about boats--power and sail, racer and cruiser; dinghy and motoryacht. In the clear, friendly, nontechnical style that has made his column for Offshore magazine so enduring and popular, Gerr explains everything from how thick a hull should be to why one sailboat tips less than another, from choosing an engine to designing a rig for your trawler yacht, from building a dinghy to simple rules of thumb for dozens of design quandaries. Gerr writes for the boat noodler in all of us--those seriously interested in learning and dreaming about all types of watercraft. There is no better way to become a better sailor, equipped to handle any contingency. And there's no better place to start than right here.

Ships' Fastenings Jan 25 2022 In this first detailed study of hull fastenings, Michael McCarthy describes those found on ships throughout the ages, from sewn-plank boats of the ancient world and Micronesia to Viking ships, Mediterranean caravels, nineteenth-century ocean clippers, and steamships. McCarthy also provides a history of many discoveries and innovations that accompanied changes in the kinds of fastenings used and the way they were secured--such as copper sheathing, metallurgy, and welding. Underwriting and insurance are also discussed, since the registries kept by Lloyd's and others dictated the form and method of fastening. This book will interest not only archaeologists and historians, but also boat builders and enthusiasts.

The U-Boat War in the Atlantic Sep 20 2021 This is the second of three volumes covering the U-boat campaign in the Atlantic during the Second World War. This is the fascinating account, as told from the German perspective, of the Battle of the Atlantic, the longest-running, continuous military campaign in World War II, spanning from 1939 through to Germany's defeat in 1945. At its core was the Allied naval blockade of Germany, which was announced the day after the declaration of war, although it quickly grew to include Germany's counter-blockade. The name "Battle of the Atlantic", was coined by Winston Churchill in 1941 and he famously stated that the U-boats were the only thing that really frightened him. The U-boat war encompassed a campaign that began on the first day of the European war and lasted for six years, involved thousands of ships and stretched over thousands of square miles of ocean, in more than 100 convoy battles and perhaps 1,000 single-ship encounters. In the 68 months of World War II, 2,775 Allied merchant ships were sunk for the loss of 781 U-boats. This is the story of that massive encounter from the German perspective. Published in three volumes, this work was compiled under the supervision of the U.S Navy Department and the British Admiralty by Fregattenkapitan Gunther Hessler. The author, though without previous experience as a writer, had first hand experience of U-boat warfare having commanded a U-boat in 1940 and 1941. For the remainder of the war he was Staff Officer to the Flag Officer commanding U-boats. He had access to German war diaries and other relevant documents concerning U-boat command, and this work based on these many documents, tells the story entirely from the viewpoint of that command. For this reason this work is essential reading for anyone interested in the history of World War II from primary sources and will be of enduring interest to those engaged in attempting to unravel the true nature of submarine warfare in World War II.

The Folkboat Story Jan 13 2021 A clinker design that sails equally fast and well whether it is made from wood or fiberglass, the Nordic Folkboat has been around for 60 years. Many lighter, sleeker and faster boat classes have come and gone during those decades, yet, the Folkboat is still going strong. The class enjoys a remarkable popularity in some of the world's most beautiful and challenging sailing areas, including Scandinavia, Germany, the United Kingdom, the United States and Australia. Designed during the early years of World War II, the 25-foot Folkboat is not a mere survivor of difficult times. Its minimalism, robustness and seakindliness prevailed during the following years of prosperity and have helped it resist radical modifications. Costs have been kept in check and boats of all ages are still sailed and participate successfully in many regattas.

Lady in a Boat Jun 25 2019 "Bucking the despair of modern challenges facing the Caribbean region presented by globalism, the International Monetary Fund, and the failure of many political leaders, this collection of poetry offers a consoling and healing message on such griefs from the Grenadian and Caribbean perspective. The strength of the local people is presented in the particularities of a resilient 80-year-old woman who embodies the faith of the Caribbeans. The portrait of the end of the Grenadian revolution enhances these celebrations of love, children, and the strength of the Caribbean people."

Hirschfeld Oct 10 2020 Whilst there have been many memoirs written by U-boat commanders of the Second World War, a book such as this, based upon the diaries of a senior Petty Officer telegraphist, written in 'real time' is something very special. Wolfgang Hirschfeld, whose diaries Geoffrey Brooks has translated is a born story teller. The principal chapters describe his experiences during six war patrols in U-109, in which he served as the senior telegraphist. His is a tale which covers the whole kaleidoscope of emotions shared by men at war—a story of immense courage and fortitude, of remarkable comradeship born of the dangers, frustrations and privations shared and of transitory moments of triumph. Throughout runs a vein of humour, without which resistance to stress would have been virtually impossible. We get to know one of Germany's great U-boat aces, 'Ajax' Bleichrodt, holder of the Knight's Cross of the Iron Cross with Oak Leaves and, in a special biographical appendix, learn how he finally cracked under the strain. The role of Admiral Karl Donitz, the dynamic commander of the U-boat service, so fascinatingly described by Hirschfeld, is of special interest—not least because even this dedicated Nazi had clearly realized by September, 1942, that the war was fast being lost. In 1944 Hirschfeld was promoted Warrant Officer and found himself on a large, schnorkel-equipped boat (U-234) heading for Japan with a load of high technology equipment and, in addition, a quantity of uranium ore.

The possible significance of that uranium has been deeply researched by Geoffrey Brooks and is discussed in a second appendix.

Phoenix from the Ashes Feb 11 2021 "We wanted places no rougher than a farm pond. The silence in these places was complete—so much so that we found ourselves speaking in whispers." —from Phoenix from the Ashes Sailors dream of a quiet life living aboard a classic yacht, yet few have been able to make that dream a way of life. This is the story of one couple who did, and their reflections on the reality of this seemingly idyllic existence at sea. After a fire destroyed everything they owned, Justin Ruthven-Tyers and his wife began their journey by literally chopping trees for wood to build their sailing yacht. And with wonderful turn of phrase and humorous narrative, Ruthven-Tyers takes us on their journey as they set sail for the wilds of Scotland—up creeks, in rocky pools, in lovely desolate places whose descriptions will make any armchair traveler ache with envy and inspire anyone dreaming of living a similar lifestyle at sea.

The Elements of Boat Strength: For Builders, Designers, and Owners Apr 03 2020 "This work is significant. It is the first to include a method of assessing structural strength in the context of the modern marine environment." --Commander M. C. Cruder, U.S. Coast Guard Acclaimed author and naval architect Dave Gerr created this unique system of easy-to-use scantling rules and rules-of-thumb for calculating the necessary dimensions, or scantlings, of hulls, decks, and other boat parts, whether built of fiberglass, wood, wood-epoxy composite, steel, or aluminum. In addition to the rules themselves, The Elements of Boat Strength offers their context: an in-depth, plain-English discussion of boatbuilding materials, methods, and practices that will guide you through all aspects of boat construction. Now you can avoid wading through dense technical engineering manuals or tackling advanced mathematics. The Elements of Boat Strength has all the formulas, tables, illustrations, and charts you need to judge how heavy each piece of your boat should be in order to last and be safe. With this book, an inexpensive scientific calculator, and a pad of paper, you'll be able to design and specify all the components necessary to build a sound, long-lasting, rugged vessel. What reviewers have said about Dave Gerr's books: Propeller Handbook "By far the best book available on the subject."--Sailing "The best layman's guide we've ever read."--Practical Sailor Dave Gerr and International Marine made a complicated topic understandable and put it into a handbook that is easy to use."--WoodenBoat "Without doubt the definitive reference for selecting, installing, and understanding boat propellers."--Royal Navy Sailing Association Journal The Nature of Boats "If you are not nautically obsessed before reading this book, you will most certainly be afterward."--Sailing Fascinating potpourri of information about today's boats, modern and traditional."--WoodenBoat
