**1929 and 2008: Two Crashes, One Cause** May 16 2021 Draws parallels between the Financial Meltdown of 2008 and the Stock Market Crash of 1929. Argues that both were ultimately the result of technological change with electrification being the root cause of the Stock Market Crash of 1929 and factory automation and outsourcing being the cause of the current financial meltdown/crash. Shows how in both cases, money income was insufficient to sustain full employment and how Republican Administrations set out to resolve the problem (Hoover with commercial policy in 1929, Reagan and Bush in the 1980's with disguised fiscal policy in the form of mortgage securitization). Provides estimates of the income and expenditure shortfall from 1984 to 2009 in the range of \$5 to \$7 Trillion, which is shown to correspond to the extent of the sub-prime mortgage debacle. Concludes by discussing the various policy options available to the Obama Administration.

**European Security Governance and the European Neighbourhood after the Lisbon Treaty** Jun 04 2020 The EU has often been considered to be a weak security actor. However, any assessment of the EU's role in international security is underpinned by a specific understanding of security. This book is based on a broad understanding of security. We consider that security concerns are increasingly triggered by challenges such as terrorism, climate change, mass migration flows, and many other 'non-traditional' security issues. This book tries to capture these aspects of the EU's fast changing security policies following the entry into force of the Lisbon Treaty on 1 December 2009. There are several common themes stemming from a

combined reading of the chapters. Firstly, the EU has sought to simultaneously pursue its security objectives and spread its values, such as democracy, the rule of law, and human rights, by encouraging reforms in its neighbourhood. However, it is increasingly evident that there are tensions and contradictions between these two objectives, which can be illuminated and better understood by considering another strand of literature, with which there has been little engagement in EU studies to date, namely the literature on human security. This book is the first to analyse these hugely topical developments in European security after the Lisbon Treaty. It was published as a special issue of *Perspectives on European Politics and Society*.

*Amending the Nuclear Waste Policy Act* Feb 22 2022

Calculated Risks May 04 2020 This well-documented study examines one of the increasingly pressing problems for US homeland security: the storage and management of radioactive waste. Despite pressing homeland security and energy security concerns associated with highly radioactive waste, political considerations have prevented policy makers from adopting adequate long-term solutions to the problem. This book explores nuclear waste problems through the broader lens of federal, state and local government and the resultant constraints on policy that emerge within the American political system. Presenting specific case studies to highlight the deficiencies in current policy and planning as well as the possibility of terrorist activity, it is highly suited to courses on security studies and environmental politics.

**Energy and American Society – Thirteen Myths** Nov 09 2020 This book takes on a central quandary in the study of energy and environmental policy: What myths continue to exist in American culture concerning energy, the environment, and society? It enrolls twenty-four of the nation's top experts working on energy policy to debunk and contextualize thirteen energy myths relating to electric power, renewable energy, energy efficiency, transportation, and climate change. The book will appeal to an international audience.

**Arms Control and Nonproliferation** Aug 26 2019 Description of Volume 13. China : "This volume is the first publication in a new subseries of the Foreign Relations series that documents the most important foreign policy

issues of the Jimmy Carter presidential administration." From U.S. Department of State, Office of the Historian website.

**Past and Present Energy Societies** Nov 21 2021 Abundant, salutary, problematic - energy makes history. As a symbol, resource and consumer good, it shapes technologies, politics, societies and cultural world views. Focussing on a range of energy types, from electricity and oil to bioenergy, this volume analyzes the social, cultural and political concepts and discourses of energy and their implementation and materialization within technical systems, applications, media representations and consumer practice. By examining and connecting production, mediation and consumption aspects from an international and interdisciplinary perspective, the book offers an innovative view on how energy is imagined, discussed, staged and used.

*The Oxford Handbook of Energy Politics* Jul 18 2021 "In many ways, everything we once knew about energy resources and technologies has been impacted by: the longstanding scientific consensus on climate change and related support for renewable energy; the affordability of extraction of unconventional fuels; increasing demand for energy resources by middle- and low-income nations; new regional and global stakeholders; fossil fuel discoveries and emerging renewable technologies; awareness of (trans)local politics; and rising interest in corporate social responsibility (CSR) and the need for energy justice. Research on these and related topics now appears frequently in social science academic journals-in broad-based journals, such as *International Organization*, *International Studies Quarterly*, and *Review of*

International Political Economy, as well as those focused specifically on energy (e.g., Energy Research & Social Science and Energy Policy), the environment (Global Environmental Politics), natural resources (Resources Policy), and extractive industries (Extractive Industries and Society). The Oxford Handbook of Energy Politics synthesizes and aggregates this substantively diverse literature to provide insights into, and a foundation for teaching and research on, critical energy issues primarily in the areas of international relations and comparative politics. Its primary goals are to further develop the energy politics scholarship and community, and generate sophisticated new work that will benefit a variety of scholars working on energy issues"--

*Everything All at Once* Jul 06 2020 In the New York Times bestseller *Everything All at Once*, Bill Nye shows you how thinking like a nerd is the key to changing yourself and the world around you. Everyone has an inner nerd just waiting to be awakened by the right passion. In *Everything All at Once*, Bill Nye will help you find yours. With his call to arms, he wants you to examine every detail of the most difficult problems that look unsolvable—that is, until you find the solution. Bill shows you how to develop critical thinking skills and create change, using his “everything all at once” approach that leaves no stone unturned. Whether addressing climate change, the future of our society as a whole, or personal success, or stripping away the mystery of fire walking, there are certain strategies that get results: looking at the world with relentless curiosity, being driven by a desire for a better future, and being willing to take the actions needed to make change happen. He shares how he came to create this approach—starting with his Boy Scout training (it turns out that a practical understanding of science and engineering is immensely helpful in a capsizing canoe) and moving through the lessons he learned as a full-time engineer at Boeing, a stand-up comedian, CEO of The Planetary Society, and, of course, as Bill Nye The Science Guy. This is the story of how Bill Nye became Bill Nye and how he became a champion of change and an advocate of science. It’s how he became The Science Guy. Bill teaches us that we have the power to make real change. Join him in... dare we say it... changing the world.

How the Republicans Engineered the Stock Market Crash of 1929 and the Financial Meltdown Of 2008 Mar 14 2021 Shows how and why the Stock Market Crash of 1929 and the Financial Meltdown of 2008 both occurred under Republican Administrations. In both cases, unsustainable policy measures aimed at increasing purchasing power led to boom and bust. In the 1920's, tariff policy was used to bolster product markets; in the 1980's and 1990's, easy credit (consumer and mortgage) policies were used to do likewise. Both proved to be unsustainable, leading ultimately to financial meltdowns---the Stock Market Crash of 1929 and the Financial Meltdown of 2008.

**The Financial Meltdown of 2008: A Fundamentals Approach** Apr 14 2021 Presents a fundamentals interpretation of the Financial Meltdown of 2008. Attributes it to two innovations, namely factory automation and outsourcing, both of which contributed to lowering the wage income to GDP ratio, thus resulting in underincome. Underincome describes a situation in which markets are unable to monetize output (profits being a residual form of income), leading to stagnation, recession and ultimately, depression. Financial innovation begun in earnest in the early 1980's attempted to correct the underlying weakness. Consumer credit would shore up product markets. This policy worked for a quarter century (1983-2008), but was cut short by (i) the over-endebtedness of consumers and (ii) the collapse of the housing market. Discusses the various options available to the Obama Administration.

**Unstoppable** Apr 26 2022 Just as World War II called an earlier generation to greatness, so the climate crisis is calling today's rising youth to action: to create a better future. In UNSTOPPABLE, Bill Nye crystallizes and expands the message for which he is best known and beloved. That message is that with a combination of optimism and scientific curiosity, all obstacles become opportunities, and the possibilities of our world become limitless. With a scientist's thirst for knowledge and an engineer's vision of what can be, Bill Nye sees today's environmental issues not as insurmountable, depressing problems but as chances for our society to rise to the challenge and create a cleaner, healthier, smarter world. We need not accept that transportation consumes half our energy, and that two-thirds of the energy you put into your car is immediately thrown away out the tailpipe. We need not accept that dangerous emissions are the price we must pay for a vibrant economy and a comfortable life. Above all, we need not accept that we will leave our children a planet that is dirty, overheated, and depleted of resources. As Bill shares his vision, he debunks some of the most persistent myths and misunderstandings about global warming. When you are done reading, you'll be enlightened and empowered. Chances are, you'll be smiling, too, ready to join Bill and change the world. In *Unstoppable: Harnessing Science to Change the World*, the New York Times bestselling author of *Undeniable: Evolution and the Science of Creation* and former host of "Bill Nye the Science Guy" issues a new challenge to today's generation: to make a cleaner, more efficient, and happier world. Praise for UNDENIABLE: "With his charming, breezy, narrative style, Bill empowers the reader to see the natural world as it is, not as some would wish it to be. He does it right. And, as I expected, he does it best." -Neil deGrasse Tyson, Ph.D, host of COSMOS "Bill Nye, 'the Science Guy,' has become a veritable cultural icon....[T]he title of his new book on evolution...[is] 'Undeniable,' because, yes, there are many Americans who still deny what Darwin and other scientists long ago proved." -Frank Bruni, The New York Times "With a jaunty bow tie and boyish enthusiasm, Bill Nye the Science Guy has spent decades decoding scientific topics, from germs to volcanoes, for television audiences....In his new book, Nye delights in how [evolution] helps to unlock the mysteries of everything

from bumblebees to human origins to our place in the universe." -National Geographic "When it comes to Bill Nye, 'Science Guy' doesn't even begin to cover it. When he's not being summoned to act as a voice of reason for news outlets or leading meetings as CEO of the Planetary Society, he is living the life of a best-selling author....His recently published book, 'Undeniable: Evolution and the Science of Creation,' enlightens readers while using a conversational, educational tone. After all, it's his ability to break down even the most complicated topics into bite-size pieces that made him such a hit on his '90s children's show 'Bill Nye, the Science Guy.'" -The Boston Globe "Mr. Nye writes briskly and accessibly...[and] makes an eloquent case for evolution."-The Wall Street Journal "Because [Bill Nye is] a scientist, he has no doubts that the 'deniers' of evolution are flat wrong. And because he's a performer, his book is fun to read and easy to absorb." -The Washington Post "Ignite your inner scientist when Nye, known for delivering geeky intel with clarity and charm, takes on one of society's most hotly debated topics (yes, still)." -Time Out New York
