European Handbook of Neurological Management Aug 10 2020 Evidence-based, peer reviewed, best practice management guidelines for neurologists Diagnosis is only part of the puzzle. Effective treatment is what your patients really want. The European Federation of Neurological Societies has been publishing management guidelines in the European Journal of Neurology for many years. Developed by a consensus approach, using graded evidence, and then fully peer reviewed, these guidelines provide gold-standard, best-practice guidance to the treatment of neurological disorders. They help bridge the gap between what is done and what should be done for patients with neurological disorders. The basic guidelines have been expanded with 'Recommendations' based on strong evidence and 'Good Practice Points' where only weaker evidence is available. The Guidelines in this volume cover: Investigation Major neurological diseases Neuromuscular diseases Infections Neurological problems Sleep disorders Rehabilitation The European Handbook of Neurological Management provides a thoroughly rounded and grounded approach to best-practice neurological management using evidence-based principles.

Urinary Incontinence Jan 15 2021 Urinary incontinence (UI) is a common symptom that can affect women of all ages, with a wide range of severity and nature. While rarely life-threatening, incontinence may seriously influence the physical, psychological and social well being of affected individuals. The impact on the families and carers of women with UI may be profound, and the resource implications for the health considerable. The International Continence Society (ICS) has standardised terminology in lower urinary tract function: UI is defined as the complaint of any involuntary urinary leakage. This may occur as a result of a number of abnormalities of function of the lower urinary tract, or as a result of other illnesses, and these tend to cause leakage in different situations. Definitions for stress, mixed and urge UI and overactive bladder (OAB) are given in the glossary. Other types of UI may be described by the situations that provoke urine loss, for example during sexual intercourse, or on laughing or giggling. Some patients may simply report being wet all the time. This may be a reflection of the severity of their condition, although may on occasions be due to other pathologies, for example fistula. There are currently approximately 80 cases of fistula between the urinary tract and genital tract treated each year in England and Wales and this condition is not

considered further in this guideline. It is recognised that UI may be of a transient nature on occasion, reflecting acute health or environmental factors.

The Challenges of Nursing Stroke Management in Rehabilitation Centres Apr 17 2021 This volume provides integral knowledge of all aspects of stroke care and rehabilitation after stroke, and is therefore highly relevant for nurses who work in rehabilitation centers. It outlines the several phases after stroke, for example the type of care patients may receive in the chronically phase at home. Nurses will obtain knowledge about treatment, importance of observation and caring with a special focus on communication problems, swallowing problems, activities of daily living, urinary and defecation problems, shoulder and hand issues. Thanks to photographs, nurses will learn to transfer patients in the adequate positions. Several chapters provide nurses with examples of effective and efficient collaboration with multidisciplinary professionals, informal caregivers and patients themselves. There is also an emphasis on behavior and cognitive functioning. And lastly, in the final chapters authors highlight the organization of rehabilitation and integrated care issues. Nurses play a very important role in rehabilitation, education, counseling, prevention, and caring for patients with cerebrovascular accident (CVA). In caring for stroke patients, nurses need specific competences and abilities that go beyond the general neurologic knowledge and experience. Nurses need to collaborate in an efficient and effective manner with multidisciplinary team members in their organization and across organizations. This book discusses medical aspects and specific symptoms of a stroke, as well as the limitations that patients experience, and which interventions are indicated for recovery.

Therapeutic Management of Incontinence and Pelvic Pain Dec 26 2021 As medical knowledge advances we tend to compartmentalise our specialties into smaller units; but, hand in hand with this, there is a growing understanding between the different disciplines within the caring professions. Thus we are able to share our special skills to the benefit of patients. This book is an excellent example of the advantage of interdisciplinary communication and demonstrates a refreshing holistic approach to the problems of incontinence and pelvic pain. Written with physiotherapists in mind, the editors have invited contributions from many distinguished experts in their own field. These have been compiled into a comprehensive book, which will appeal to many healthcare professionals. I have had great pleasure in reading this book. During the time that I have been involved with 'pelvic dysfunction' there have been many exciting advances. These are all included in a most readable sequence, some presented with a refreshing new twist. In particular, I would like to bring to your attention the section on 'pelvic pain'. Because of our lack of understanding it has been a problem that is too often ignored and here at last are some practical ideas for therapeutic management. There is still much progress to be made in the field of incontinence and pelvic pain and as yet, no editors can be expected to produce a definitive work. However, I would like to recommend this book most strongly. It has a new approach to this topic, which is still a major problem for many people.

Continence Care Pathways Feb 25 2022 This practical and timely book gives all the information required to implement care pathways for continence so that patients at all levels can have access to evidence based support and advice. It guides the reader through the pathway experience offering suggestions and advice on how to implement them locally, avoiding pitfalls, and incorporating case studies from Trusts who implement them. Written by experts in the field, it brings evidence and

practice together, offering an alternative approach to assessment.

Management of Fecal Incontinence for the Advanced Practice Nurse Sep 30 2019 The book describes the current management of fecal incontinence from an advanced practice nursing perspective. It fills a gap in nursing knowledge promoting and showcasing the expertise and significant contribution of advanced practice nurses whose role is so important in the health care system. Authors' objectives are to disseminate information about evidenced-based nursing care for the incontinent patient to improve outcomes and quality of life as well as to instruct nurses involved in continence care to practice at a high quality level. The book is structured in chapters, starting by explaining fecal incontinence and its impact on quality of life. The second chapter discusses advanced practice continence nursing. The epidemiology of fecal incontinence is reviewed to provide an appreciation of the scope of the problem. Normal defecation and mechanisms to ensure continence are reviewed to improve understanding of the alterations resulting in fecal incontinence. The next chapters focus on assessment, diagnosis and management of fecal incontinence in various patient groups which parallels the delivery of care. Since surgery is a treatment option in some cases, a chapter explains surgical approaches and the postoperative nursing care. As skin damage is the most common complication of fecal incontinence there is a chapter about management of these associated problems. The last chapter addresses managing fecal incontinence in the patient with urinary continence also. Practice related chapters include a case study. All chapters highlight key information in a box or table. The intended readers are international advanced practice nurses who care for patients with incontinence as well as continence nurse specialists practicing at a general level. General nurses interested in continence care might also be interested in reading the book. Other disciplines who are part of the healthcare team may be interested in learning more about role of the advanced practice nurse.

Older People takes a unique case-study approach, with individual chapters presenting nursing practice-based case studies on some of the most common areas of care faced by nurses working around the world with older people. Each case study illustrates the connections between practice, theory, evidence and values. User-friendly and accessible, this textbook includes key points, reflection activities, test points, and perspectives from older people throughout. Key features An up-to-date treatment of the nursing contribution to key geriatric syndromes International expert contributions from the UK, Sweden, Switzerland, Australia and China An evidence-based, case-study approach to the care of older people

Smart Homes and Health Telematics Jul 01 2022 We often conceptualize that older adults retire into a life of carefree luxury among palm trees, golf courses, and pristine beaches. Unfortunately, reality differs today – many retire in place, and often it is the case they retire in rural areas far from hospitals and care-giving centers. For instance, over half of the older population in the state of Minnesota lives in small towns away from the center of care, which is Minneapolis/St. Paul. This year, ICOST 2008 aimed at focusing on this important reality and on gerontechnology—the use of technology to enhance the quality of life of older adults in rural lands. We had a strong technical program this year spanning many critical topics including: remote monitoring and tele-care, access control and privacy preservation, understanding user requirements and needs, autonomic learning and reasoning about user behavior, activities and contexts, user interface design, middleware for sensing and actuation in smart homes, cognitive assistants, context-aware service provisioning, among other topics. We received a total of 54 submissions of papers, abstracts and posters, from 14 different countries. Through a blind review process, we accepted 24 full papers, 9 abstracts, and 7 posters. Each submission received two or three reviews with the exception of a few that received four reviews. We are thankful to all the reviewers who helped in the review process including members of the Technical Committee and the additional reviewers that we needed to compensate for unreturned reviews.

Handbook of Oncology Nursing Feb 13 2021 This completely revised edition continues to reflect information about the treatment of cancer, oncologic emergencies, and common clinical problems. Prepared for the nurse caring for cancer patients, there is extensive use of practical problem/intervention tables. New content, such as fatigue and spirituality, together with completely updated chapters, provide the nurse in the hospital, clinic, or home with an easy-to-use guide for dealing with complex patient problems.
