Light Horse May 05 2020 The mounted soldier is one of the most evocative symbols in Australian military history. Now a celebrated part of Australia's army heritage, the role and very existence of mounted troops in modern warfare was being called into question at the time of its most crowning military moments. Light horse regiments, particularly those that served in South Africa, Palestine and the trenches of Gallipoli, played a vital role in Australia's early military campaigns. Based on extensive research from both Australia and Britain, this book is a comprehensive history of the Australian Light Horse in war and peace. Historian Jean Bou examines the place of the light horse in Australia's military history throughout its existence, from its antecedents in the middle of the nineteenth century, until the last regiment was disbanded in 1944.

Quality Procedures for Hardware and Software Apr 27 2022 How to Use This Book The primary purpose of this book is to assist small companies, involved in both hardware and software, to devise and evolve their own quality systems. There are a number of national and now international standards which outline the activities for which procedures and records need to be specified. They are described and compared in Chapter 2, and the subsequent guidance in the book is intended to assist in meeting them. Although, at first sight, the operations of a hardware equipment developer may seem very different from those of a software house, the basic requirements of a quality system, such as the BS 5750 and ISO 1987 series of documents, are the same. For this reason the same standard can be called for in both areas and it will be seen, in Part 2, that suitable procedures can be derived to meet both types of operation. Quality standards (BS 5750, AQAP, ISO 9000 series) distinguish between companies carrying out, on the one hand, both design and manufacturing fixed functions and, on the other hand, those who only manufacture to specifications. In practice, the lesser requirements (those applying to manufacture to fixed specifications) are common to both levels of standard and the additional controls pertaining to design are added to obtain the higher

standard. Chapter 2 explains the differences in detail.

Germany and the Second World War Oct 10 2020 This is the second in the comprehensive ten-volume Germany and the Second World War. The five volumes so far published in German take the story to the end of 1941, and have achieved international acclaim as a major contribution to historical study. Under the auspices of the Militargeschichtliches Forschungsamt (Research Institute for Military History), a team of renowned historians has combined a full synthesis of existing material with the latest research to produce what will be the definitive history of the Second World War. This volume surveys the first year of the war deliberately begun by Nazi Germany. The authors examine the train of interconnected political and military events, and set military operations against the background of Hitler's war policy and general aims, both immediate and long term. The authors show that the conflict took a course quite different from that which Hitler had intended, but nevertheless resulted in a series of conquests for the Third Reich.

Proportionality in International Humanitarian Law Sep 08 2020 The principle of proportionality is one of the cornerstones of International Humanitarian Law. Almost all states involved in armed conflicts recognize that it is prohibited to launch an attack that is expected to cause incidental harm to civilians that exceeds the direct military advantage anticipated from the attack. This prohibition is included in military manuals, taught in professional courses, & accepted as almost axiomatic. Yet, the exact meaning of this principle is vague. Almost every issue is in dispute. Controversy is especially rife regarding asymmetrical conflicts, in which many modern democracies are involved. How exactly should proportionality be implemented when the enemy is not an army, but a non-state actor embedded within a civilian population? What does it mean to use precautions in attack, when almost every attack is directed at objects that are used for both military & civilian purposes?
