Popular Science Jan 14 2021 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science shares is: The future is going to be better, and science and technology are the driving forces that will help make it better.

HCCI and CAI Engines for the Automotive Industry 2021 Homogeneous charge compression ignition (HCCI)/controlled auto-ignition (CAI) has emerged as one of the most promising engine technologies with the potential to combine fuel efficiency and improved emissions performance, offering reduced nitrous oxides and particulate emissions and efficiency comparable with modern diesel engines. Despite the considerable advantages, its operational range is rather limited and controlling the combustion (timing and rate of energy release) is still an area of on-going research. Commercial applications are, however, close to reality. HCCI and CAI engines for the automotive industry presents the state-of-the-art in research and development on an international basis, as a one-stop reference work. The background to the development of HCCI technology is described. Basic principles, the technologies and their potential applications, strengths and weaknesses, as well as likely future trends and sources of information are reviewed in the areas of gasoline HCCI / CAI engines; diesel HCCI engines; HCCI / CAI engines with alternative fuels; and advanced modelling and simulation techniques. The book provides an invaluable source of information for scientific researchers, R&D engineers and managers in the automotive engineering industry. Presents the state-of-the-art in research and development on an international basis An invaluable source of information for scientific researchers, R&D engineers and managers in the automotive engineering industry worldwide Looks at one of the most promising engine technologies around
