[Evolution of Cardio-Metabolic Risk from Birth to Middle Age](#)      Oct 31 2019 That precursors of adult coronary artery disease, hypertension, and type II diabetes begin in childhood have been clearly established by the Bogalusa Heart Study. This unique research program has been able to follow a biracial (black/white) population over 35 years from childhood through mid-adulthood to provide perspectives on the natural history of adult heart diseases. Not only do these observations describe trajectories of cardio-metabolic risk variables leading to these diseases but provide a rationale for the need to begin prevention beginning in childhood. The trajectories of the burden of cardio-metabolic risk variables in the context of their fetal origin and chromosome telomere dynamics provide some insight into the metabolic imprinting in utero and aging process. The observed racial contrasts on cardio-metabolic risk variables implicate various biologic pathways interacting with environment contributing to the high morbidity and mortality from related diseases in our population. To address the seriousness of the onset of cardiovascular disease in youth, approaches to primordial prevention are described focussing on childhood health education as an important aspect of Preventive Cardiology.

[Mechanisms and New Targets for the Treatment of Chronic Pain](#)

Dec 14 2020 Acute pain

has a physiological protective role in preventing tissue damage. However, pain can become chronic due to a multitude of pathophysiological states, such as: trauma, inflammation, neural injury, viral infection, cancer, autoimmune diseases and vascular and metabolic disorders. These pathological states can trigger alterations of the pain pathways that can lead to hypersensitivity, and in such circumstances, pain loses its protective role and instead, becomes persistent and debilitating affecting seriously to the quality of life of patients. Chronic pain is one of the most important health problems worldwide. It has been estimated that 10% of adults are diagnosed with chronic pain each year. However, despite the high prevalence of chronic pain, its management is still no fully satisfactory probably due to the variety of chronic pain conditions with different etiologies (neuropathic, visceral and musculoskeletal pain), and because their pathophysiological mechanisms are only partially known. Therefore, there is a huge need for new effective therapies for the control and/or prevention of the different types of chronic pain. Chronic pain is associated with plastic changes in pain circuits of the peripheral and central nervous system, including changes in the expression of ion channels, neurotransmitters and receptors. In addition, there is growing consensus on non-neuronal mechanisms that can amplify or resolve chronic pain, and cells traditionally thought to act just as coordinators of the inflammatory response (such as immune and glial cells) are now accepted as real modulators of pain signaling. In this regard, animal models of persistent pain, such as models of neuropathic and visceral pain and models of arthritis, are helping to elucidate our understanding of the pathogenesis of chronic pain and make it possible to test experimental treatments.

Raising Critical Thinkers Feb 02 2020 A guide for parents to help children of all ages process the onslaught of unfiltered information in the digital age. Education is not solely about acquiring information and skills across subject areas, but also about understanding how and why we believe what we do. At a time when online media has created a virtual firehose of information and opinions, parents and teachers worry how students will interpret what they read and see. Amid the noise, it has become increasingly important to examine different perspectives with both curiosity and discernment. But how do parents teach these skills to their children? Drawing on more than twenty years' experience homeschooling and developing curricula, Julie

Bogart offers practical tools to help children at every stage of development to grow in their ability to explore the world around them, examine how their loyalties and biases affect their beliefs, and generate fresh insight rather than simply recycling what they've been taught. Full of accessible stories and activities for children of all ages, *Raising Critical Thinkers* helps parents to nurture passionate learners with thoughtful minds and empathetic hearts.

How to Commercialise Research in Biotechnology? Mar 29 2022 ?Biotechnology is considered as a key technology of the 21st century with the potential to offer technological solutions for global health and resource-based problems. Oliver Uecke analyses how early stages of the innovation process in biotechnology can be effectively managed, with the aim to transfer an innovation from academia to industry. A mixed method approach is applied with a multiple case study approach to identify characteristics for effective management and with the method of discrete choice experiments/best-worst scaling to estimate the importance of these characteristics. This study adds to existing research by identifying a group of five important characteristics that should be considered in the early stages of the innovation process, compared to a group of four characteristics that are less important. The results have implications for policy, directors and the management of research institutes and universities, entrepreneurs, TTO manager and other stakeholders involved in technology transfer.

Fairy Tales with a Black Consciousness Jun 19 2021 The all new essays in this book discuss black cultural retellings of traditional, European fairy tales. The representation of black protagonists in such tales helps to shape children's ideas about themselves and the world beyond--which can ignite a will to read books representing diverse characters. The need for a multicultural text set which includes the multiplicity of cultures within the black diaspora is discussed. The tales referenced in the text are rich in perspective: they are Aesop's fables, Cinderella, Rapunzel and Ananse. Readers will see that stories from black perspectives adhere to the dictates of traditional literary conventions while still steeped in literary traditions traceable to Africa or the diaspora.

International Handbook of Metacognition and Learning Technologies

Jan 15 2021

Education in today's technologically advanced environments makes complex cognitive demands on students pre-learning, during, and post-learning. Not surprisingly, these analytical learning processes--metacognitive processes--have become an important focus of study as new learning technologies are assessed for effectiveness in this area. Rich in theoretical models and empirical data, the International Handbook of Metacognition and Learning Technologies synthesizes current research on this critical topic. This interdisciplinary reference delves deeply into component processes of self-regulated learning (SRL), examining theories and models of metacognition, empirical issues in the study of SRL, and the expanding role of educational technologies in helping students learn. Innovations in multimedia, hypermedia, microworlds, and other platforms are detailed across the domains, so that readers in diverse fields can evaluate the theories, data collection methods, and conclusions. And for the frontline instructor, contributors offer proven strategies for using technologies to benefit students at all levels. For each technology covered, the Handbook: Explains how the technology fosters students' metacognitive or self-regulated learning. Identifies features designed to study or support metacognitive/SRL behaviors. Reviews how its specific theory or model addresses learners' metacognitive/SRL processes. Provides detailed findings on its effectiveness toward learning. Discusses its implications for the design of metacognitive tools. Examines any theoretical, instructional, or other challenges. These leading-edge perspectives make the International Handbook of Metacognition and Learning Technologies a resource of great interest to professionals and researchers in science and math education, classroom teachers, human resource researchers, and industrial and other instructors.

Physical Activity Epidemiology Dec 02 2019 Physical Activity Epidemiology, Second Edition, provides a comprehensive discussion of current population-level studies showing the influence of physical activity on disease. Updated with extensive new research collected in the eight years since the previous edition, the second edition adds the expertise of respected epidemiologist I-Min Lee. To assist readers in understanding the public health significance of physical activity, Dishman, Heath, and Lee present a detailed review of research findings and what those findings suggest regarding the relationship between physical activity and a variety of health risks. The second edition of this groundbreaking text has been exhaustively updated to reflect the wealth of new research published in this fast-moving field of study. With more than 100 pages of additional content, the text also offers more detailed coverage of all-cause and coronary heart disease mortality, expanded coverage of pathophysiology and biological plausibility, new information on physical activity among various racial-ethnic populations, and the effects of physical activity on cognitive function, dementia, and HIV/AIDS. More than 250 tables and figures, twice the number found in the previous edition, highlight the latest epidemiological information in an easy-to-understand visual format. Physical Activity Epidemiology, Second Edition, assists readers in understanding how leisure-time physical activity can enhance people's quantity and quality of life by summarizing the available knowledge, detailing the methods used to obtain it, considering its implications for public health, and outlining the important questions that remain. Readers will find comprehensive discussion of these topics:

- Evidence that physical activity protects against the development of coronary heart disease and stroke and premature death from all causes
- Population-based studies and clinical experiments providing evidence that physical activity and exercise play a role in the primary and secondary prevention of mild hypertension, dyslipidemia, and obesity
- Contemporary epidemiological evidence that physical activity reduces the risk of type 2 diabetes and osteoporosis and protects against the development of breast and colon cancers, some inflammatory diseases, depression, and anxiety disorders
- Considerations in the promotion of a safe, physically active lifestyle among all segments of the

population Physical Activity Epidemiology, Second Edition, will engage and challenge students by examining the state of current research in all of its variation and even ambiguity. The text details the methodology and findings of classic and contemporary studies and then helps students begin to analyze the results. Special Strength of the Evidence sections found at the end of most chapters summarize the findings to determine the extent to which correlation and causation can be proven. Chapter objectives, chapter summaries, and sidebars in each chapter assist students in focusing on the key points of study, and an extensive glossary with detailed definitions provides a handy reference for review. Instructors will find a new image bank in this edition to enhance their class lecture materials. Physical Activity Epidemiology, Second Edition, offers students, sport and exercise scientists, health and fitness professionals, and public health administrators a comprehensive presentation of significant studies, how these studies contribute to understanding the relationship between activity and disease prevention, and how this information can be used in leading individuals, communities, and global society toward increased health and longevity.

Transnational and Comparative Research in Sport Jul 01 2022 The wider adoption of a post-modern understanding of truth and knowledge, an acceptance of the prevalence of Orientalism inherent in much Western research, and the diminished significance of the 'local' within the rhetoric of globalization have all combined to constrain comparative and transnational research under the weight of theoretical and methodological concerns. Transnational and Comparative Research in Sport addresses these difficulties in the context of sport studies, with the aim of developing typology which can be adopted to help re-establish meaningful transnational and comparative research. The book covers theoretical and substantive contexts and introduces a four-fold typology of approaches to comparative research, each supported by case studies and full discussion. .

Self-directed multimodal learning in higher education Aug 29 2019 This book aims to provide an overview of theoretical and practical considerations in terms of self-directed multimodal learning within the university context. Multimodal learning is approached in terms of the levels of multimodality and specifically blended learning and the mixing of modes of delivery (contact and distance education). As such, this publication will provide a unique snapshot of multimodal practices within higher education through a self-directed learning epistemological lens. The book covers issues such as what self-directed multimodal learning entails, mapping of specific publications regarding blended learning, blended learning in mathematics, geography, natural science and computer literacy, comparative experiences in distance education as well as situated and culturally appropriate learning in multimodal contexts. This book provides a unique focus on multimodality in terms of learning and delivery within the context of self-directed learning. Therefore, the publication would not only advance the scholarship of blended and open distance learning in South Africa, but also the contribute to enriching the discourse regarding self-direction. From this book readers will get an impression of the latest trends in literature in terms of multimodal self-directed learning in South Africa as well as unique empirical work being done in this regard.
