A Sustainable Approach to Building Commissioning Sep 07 2020 An International Approach to Sustainability was written by Steven P. Driver Ph.D. to educate anyone interested in reducing operational costs in buildings with an interest in making a difference in climate change. Through the application of energy conservation techniques, whether it's your home or workplace, this e-book can help you reduce energy consumption. This e-book was written to educate home owners, building managers, real estate developers, university and campus facility maintenance personnel, employees, and anyone else with an interest in helping our environment. This publication offers an understanding of some available technologies to mitigate energy waste. Having overcome proprietary barriers which restricted the full understanding of how to combine artificial and human intelligence with respect to building commissioning is what makes this publication unique. After completing several years of post-doctoral research to understanding differences and benefits between ongoing and retroactive commissioning, we now have a better vision of what is required to make our buildings sustainable with respect to energy consumed. This publication includes over 30 years of experience in energy management and formed the basis for a U.S trademark on Sustainable Commissioning, a concept explained in this e-book. The journey continues in researching new energy reduction technologies and piloting them confirming further effectiveness of the concept. The content in this e-book was validated through the deployment of several case studies applying the Sustainable Commissioning concept. The results from those case studies have validated an average return on investment of 62% with a 75% internal rate of return resulting in an 18 month simple pay back. The results demonstrate not only how to save operational cost, but environmental benefits averaging 1,009 metric tons of carbon emissions avoided annually for each case study.

Designing the Online Learning Experience Jul 06 2020 This book provides instructors with a holistic way of thinking about learners, learning, and online course design. The distinctive strategies derived from an integrated framework for designing the online learning experience help create an experience that is more personalized, engaging, and meaningful for online learners. The focus of this book is on the learners and the design of their online learning experiences. The authors refer to learning design instead of instructional design – which focuses on instruction and places the instructor at the center stage of the process. Therefore, the focus is on approaching a learner's online course experience as a journey consisting of a combination of learning interactions with content, instructor, and other learners. In most online courses, instructors and learners are separated in time and space and depend on technology to facilitate interactions that often lack a strong personal dimension. As online learning continues to proliferate and mature, the emphasis on simply making content available to students online is no longer acceptable. Creating online courses now requires a new way of thinking that incorporates new design ideas and approaches from a variety of fields; it also requires a new set of learning design skills for instructors and course designers. Organized into eight chapters, this volume focuses on enhancing online learning experiences for each of the major aspects of an online course, providing evidence-based principles and strategies to promote learner engagement and deep learning. The concluding chapter provides an example illustrating a real-world application of the principles and strategies covered in the book, using Design Thinking to create learning experiences. This book provides strategies for approaching the learning experience from an integrative perspective for both experienced online instructors and those new to online course design. These strategies are based on evidence-based learning design principles and encourage the reader to adopt an empathic mindset focused on the experience of the learner.

Abel's Theorem in Problems and Solutions Jun 16 2021 Do formulas exist for the solution to algebraical equations in one variable of any degree like the formulas for quadratic equations? The main aim of this book is to give new geometrical proof of Abel's theorem, as proposed by Professor V.I. Arnold. The theorem states that for general algebraical equations of a degree higher than 4, there are no formulas representing roots of these equations in terms of coefficients with only arithmetic operations and radicals. A secondary, and more important aim of this book, is to acquaint the reader with two very important branches of modern mathematics: group theory and theory of functions of a complex variable. This book also has the added bonus of an extensive appendix devoted to the differential Galois theory, written by Professor A.G. Khovanskii. As this text has been written assuming no specialist prior knowledge and is composed of definitions, examples, problems and solutions, it is suitable for self-study or teaching students of mathematics, from high school to graduate.

Drawdown Apr 26 2022 NEW YORK TIMES BESTSELLER For the first time ever, an international coalition of leading researchers, scientists and policymakers has come together to offer a set of realistic and bold solutions to climate change. All of the techniques described here - some well-known, some you may have never heard of - are economically viable, and communities throughout the world are already enacting them. From revolutionizing how we produce and consume food to educating girls in lower-income countries, these are all solutions which, if deployed collectively on a global scale over the next thirty years, could not just slow the earth's warming, but reach drawdown: the point when greenhouse gasses in the atmosphere peak and begin todecline. So what are we waiting for?
