Peer Research in Health and Social Development Oct 30 2019 Peer research is increasingly used in

international academic, policy and practice environments. It engages members of a group or social network as trusted members of a research team working in communities and settings they are familiar with. Critics, however, point to methodological concerns with peer research. These include the extent to which peer researchers genuinely represent the populations under study; data confidentiality; the emotional burden of enquiring into sensitive issues peers may experience in their own lives; and the reliability and credibility of data collected by people

who do not have academic training. The book seeks to counter the marginalisation of research experience and skills derived from close relationships with people and communities, while reflecting critically on the strengths and limitations of peer research. Chapters by a wide range of international contributors illustrate the potential of peer research to facilitate an in-depth understanding of health and social development issues and enhance policy and practice. This interdisciplinary book provides students and professionals working in health,

social science and development studies with a thorough grounding in this new style of research. It will appeal to those interested in research and evaluation; sexual health and public health; mental health, disability and social care; gender and sexuality; conservation and environmental management; migration and citizenship studies; humanitarian issues; and international development. **Lesson Study in Inclusive Educational Settings** Mar 28 2022 Lesson Study has been shown to be a systematic way of building teachers'

knowledge by allowing them to share their knowledge with each other. While much has been written about the benefits of Lesson Study in science and mathematics education, this book analyses its impact on education for children with special needs. It studies the ways in which the Lesson Study process is implemented in different educational contexts in the Netherlands, Singapore, the UK, and Sweden—countries which propagate more inclusive learning environments regardless of varying degrees of student capacities.

Sport Participation and Olympic Legacies

Feb 01 2020 This book examines claims that the Olympic Games are a vehicle to inspire and increase mass sport participation. It focuses on the mass sport participation legacy of the most recent hosts of the summer Olympics, including Atlanta, Sydney, Athens, *Access Free O And P Study Guide Free Download Pdf*

Beijing, London, Rio, and Tokyo. It is organised by host city/country and applies an analytical framework to each, addressing the socio-political context that shapes sport policy, the key changes in sport policy, the structure and governance of community sport, the Olympic and Paralympic legacy, and the changes in mass sport participation before, during, and after the Games. The book is important reading for students, researchers, and policymakers working in sport governance, sport development or management, and the sport policy sector.

Rethinking Case Study Research Dec 25 2021

Comparative case studies are an effective qualitative tool for researching the impact of policy and practice in various fields of social research, including education.

Developed in response to the inadequacy of traditional case

study approaches, comparative case studies are highly effective because of their ability to synthesize information across time and space. In *Rethinking Case Study Research: A Comparative Approach*, the authors describe, explain, and illustrate the horizontal, vertical, and transversal axes of comparative case studies in order to help readers develop their own comparative case study research designs. In six concise chapters, two experts employ geographically distinct case studies—from Tanzania to Guatemala to the U.S.—to show how this innovative

approach applies to the operation of policy and practice across multiple social fields. With examples and activities from anthropology, development studies, and policy studies, this volume is written for researchers, especially graduate students, in the fields of education and the interpretive social sciences.

different translations of security, risk, and danger. Institutions of national security policies are currently undergoing radical conceptual and organizational changes, and this book presents a novel approach for how to study and politically address the new situation. Complex and uncertain threat environments, such as terrorism, climate change, and the global financial crisis, have paved the way for new forms of security governance that have profoundly transformed the ways in which threats are handled today. Crucially, there is a decentralization of the management of

security, which is increasingly handled by a broad set of societal actors that previously were not considered powerful in the conduct of security affairs. This transformation of security knowledge and management changes the meaning of traditional concepts and practices, and calls for investigation into the many meanings of security implied when contemporary societies manage radical dangers, risks and threats. It is necessary to study both what these meanings are and how they developed from the security practices of the past. Addressing this knowledge gap, the

book asks how different ideas about threats, risk, and dangers meet in the current practices of security, broadly understood, and with what political consequences. This book will be of interest to students of critical security studies, anthropology, risk studies, science and technology studies and International Relations. mistakes. After all, to err is human. Instead, this book sets forth a national agendaâ€"with state and local implicationsâ€"for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity

influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errorsâ€"which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving

patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. To Err Is Human asserts that the problem is not bad people in health careâ€"it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vital

metaphors used to talk about cancer and the end of life (including care at the end of life) in the UK. It focuses on metaphor as a central linguistic and cognitive tool that is frequently used to talk and think about sensitive and subjective experiences, such as illness, emotions, death, and dying, and that can both help and hinder communication and well-being, depending on how it is used. The book centers on a combination of qualitative analyses and innovative corpus linguistic methods. This methodological assemblage was applied to the systematic study of the metaphors used

in a 1.5-million-word corpus. The corpus consists of interviews with, and online forum posts written by, members of three stakeholder groups, namely: patients diagnosed with advanced cancer; unpaid carers looking after a relative with a diagnosis of advanced cancer; and healthcare professionals. The book presents a range of qualitative and quantitative findings that have implications for: metaphor theory and analysis; corpus linguistic and computational approaches to metaphor; and training and practice in cancer care and hospice, palliative and end-

communities should be defined and implemented has been a contentious debate among scholars and development practitioners. In Niger Delta region of Nigeria, the failure of the government to meet the development needs of the communities has made them to depend largely on the oil MNCs to fill the development gap. Total E and P Nigeria Ltd is one of the major Oil MNCs in the Niger Delta with major operations in Akwa Ibom and Rivers States. The company is said to have entered into MoU with its host communities. The question is, how has the company contributed to the

development of these communities through its CSR/MOU policies? Consequently, this study was guided by four research questions and four null hypotheses. The study is anchored on two CSR theories: the theory of participatory development and the Stakeholders Theory by Freeman. The research design adopted was mixed methods research which entails quantitative and qualitative methods involving survey and archival as well as utilizing Questionnaire, In-depth-Interview, Focus Group Discussion (FDG) and Observation were used as instruments for data collection. While revealing that proper nutrition can have a dramatic effect on reducing and reversing these ailments as well as curbing obesity, this text calls into question the practices of many of the current dietary programs, such as the Atkins diet, that are widely popular in the West. The politics of nutrition and the impact of special interest groups in the creation and dissemination of public information are also discussed.

Between Men and Women Jan 14 2021
Divorce: A Psychosocial Study Jun 06 2020 Several jurisdictions have attempted to render divorce more harmonious by abolishing matrimonial 'fault' and facilitating the resolution of divorce disputes by mediation. In Britain, these provisions appear in the Family Law Act 1996. The book presents a challenge to the underlying assumptions that conflict and the adversarial system are undesirable. Its focus is on adults' experiences of divorce. In a series of interviews, divorcing people told their own stories of divorce. The personal

narratives revealed that divorce can be emotionally traumatic, but it has positive sides too. The emotions of divorce are not pathological, but are readily explicable as ordinary human coping strategies, in the context of the real material privations that many divorcing people suffer. These coping strategies often involve conflict and acrimony. From a psychodynamic perspective, it is argued that these are integral, and psychologically necessary, aspects of the divorce process. This book is particularly topical in the light of the recent decision of the

boyfriend's brother were sent to prison. But media attention turned on those who worked to protect children, especially the social workers and their managers, who became the focus of the reporting and of the blame. This book tells what happened to 'Baby P', how the story was told and became focused on the social workers, its threatening consequences for those who work to protect children, and its considerable impact on the child protection system in England. This is the first book to draw together all evidence available on this high profile case and will make a unique and crucial contribution to the topic. It will

make essential reading for everyone who is concerned about child protection and the care of children and about the media's impact. This revised edition contains a new Afterword bringing the story up to date.

comprehensive Handbook serves as a unique synthesis and resource for understanding how analytical frameworks developed within the literature assist in understanding the nature and management of commons resources. Such frameworks include those related to Institutional Analysis and Development, Social-Ecological Systems, and Polycentricity, among others. The book aggregates and analyses these frameworks to lay a foundation for exploring how they apply according to scholars across a wide range of disciplines. It includes an exploration of the

unique problems arising in different disciplines of commons study, including natural resources (forests, oceans, water, energy, ecosystems, etc), economics, law, governance, the humanities, and intellectual property. It shows how the analytical frameworks discussed early in the book facilitate interdisciplinarity within commons scholarship. This interdisciplinary approach within the context of analytical frameworks helps facilitate a more complete understanding of the similarities and differences faced by commons resource users and managers, the usefulness of the commons lens as an
